PREFACE.

THE STATE OF INDIANA,
OFFICE OF SECRETARY OF STATE,
INDIANAPOLIS, April, 1883.

In accordance with the requirements of an act, approved February 3, 1853 (1st G. & H., p. 358), the several administrative officers of the State, and the Trustees and Superintendents of the Benevolent, Reformatory and Educational Institutions thereof, have submitted to the Governor, and filed in the Executive Department, the reports required of them for the fiscal year ending October 31, 1882, and the calendar year ending December 31, 1882, respectively, which have been entered of record in the order of their reception, and delivered to the Secretary of State for publication, under the order of the Board of Commissioners of Public Printing and Binding.

Sixteen hundred copies of reports are now bound, in one volume, and issued to the officers and persons designated by law to receive them. The usual number of copies of each report have also been bound in pamphlet form, and delivered to the responsible officer or Superintendent of each institution, for distribution in such manner as they may deem for the best interests of the State.

E. L. HASTINGS,
Clerk Bureau Public Printing.

REPORT

OF THE

SECRETARY OF STATE

OF THE

STATE OF INDIANA,

FOR THE

FISCAL YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 14, 1882, examined by the Governor, and returned to the Secretary of State to be filed in his office and printed, as may be ordered by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

Filed in the office of the Secretary of State December 14, 1882.

E. R. HAWN,
Secretary of State.

REPORT OF SECRETARY.

STATE OF INDIANA,
OFFICE OF THE SECRETARY OF STATE. }

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

SIR—In pursuance of the law prescribing my duties as Secretary of State, I have the honor to present herewith a report of the business done in this office during the fiscal year ending October 31, 1882.

In addition to the tables elsewhere in this report, which show in detail the business done in this office, I submit the following summary:

There have been issued from the Executive Department commissions—

To State, judicial and county officers	18
To Justices of the Peace	1,509
To Notaries Public	955
To Commissioners of Deeds.....	39

Also—

Proclamation.....	1
Pardons.....	16
Remissions.....	14
Commutations.....	3
Swamp land patents.....	6
Requisitions	58
Extradition warrants.....	49

There have been filed in this office during the fiscal year articles of incorporation and consolidation of railroads, 27; and of manufacturing, mining, banking, insurance, building and loan companies, 310.

PUBLIC PRINTING.

A Bureau of Public Printing and Stationery was established by an act of the General Assembly in 1875, under the control of a Board consisting of the Governor, Auditor of State, and Secretary of State. In carrying into effect the provisions of the act referred to, the Board appointed Mr. Edwin L. Hastings Superintendent of Printing, February 14, 1881, in which capacity he is still acting.

As stated in a former report, the total cost of stationery and printing for the eleven years previous to the establishment of this Bureau, was \$590,625.25, being an average cost per year of \$53,420.88.

During the seven years and four months that the Bureau has been in existence, the whole amount paid for public printing, binding and stationery is \$151,305.61.

Notwithstanding the increased business of the various departments and institutions of the State, and the consequent increased expenditure necessary for stationery, printing and binding, it will be seen by the above statement that the whole cost per year has only been \$20,632.58, a net saving under the present Bureau of \$32,788.30 for each year, and for the seven years and four months a total saving of \$240,447.53.

In this connection I beg leave to state that during the last three years the demands on this Bureau have greatly increased the amount of its expenditures for printing, stationery and binding, and that during that period there has been no material increase in the appropriations made by the General Assembly. The result is that there has been a deficiency each year, which it has been necessary to pay out of the appropriation made for the year following. The total amount of this deficiency is now estimated at \$14,000, and it would seem to be necessary for the next General Assembly to provide for this, and to make future appropriations for this Bureau sufficient to enable it to meet the demands made upon it by the various offices and institutions of the State. The following reasons are deemed sufficient to account for the deficiency above referred to, and will also explain why the appropriations heretofore made for this Bureau have been insufficient.

First. The deliveries under the present contract made with

W. B. Burford, commenced July 1, 1881, and although of the four bids offered his was the lowest and best, the prices under his contract are at least 20 per cent. higher than the prices paid under the previous contract.

Second. The creation of a separate Bureau of Statistics, as well as the establishment of a Board of Health, have necessitated additional expenditures for stationery, printing and binding, while the cost of the Geological Bureau has not been diminished by its separation from the Statistical Bureau, for the reason that the same amount of space formerly occupied by statistics in the Geological Report, is now devoted to geology.

Third. The appointment of Supreme Court Commissioners, and the duties discharged by them, has increased the amount of stationery, printing and binding used by the Clerk of the Supreme Court in the transaction of the business of his office.

Fourth. The Adjutant-General's office has, under its present efficient management, ceased to be merely ornamental, and has become an active working office, as the number of military companies organized in different parts of the State will show.

The amount appropriated by the last General Assembly for the distribution of Laws and public documents for the fiscal year ending October 31, 1882, was \$300, being \$600 less than previous appropriations for that purpose. I respectfully suggest that the next General Assembly be requested to make such an appropriation for this purpose as will enable the Secretary of State to perform the requirements of the law in this matter, without being compelled to anticipate the appropriation of the succeeding year.

An additional duty performed by this office during the year has been that imposed by an act of the General Assembly, approved April 18, 1881, entitled "An act concerning the publication of the Revised Statutes of 1881." In pursuance of the act above referred to, the Board of Revision contracted with L. A. Herrick & Co., Chicago, Ill., for the publication and delivery at this office of 12,000 copies of said Revised Statutes.

In the discharge of the duties assigned to me by the above designated act, I contracted with the publisher to deliver direct to the several counties of this State, and to the members and officers of the Fifty-second General Assembly, such numbers of copies as it was at that time estimated they were entitled to,

for the sum of \$900. After the delivery under this contract it was ascertained that some of the counties had not been given the full number of copies to which they were entitled. These were afterwards delivered from this office.

The whole number of Revised Statutes delivered by the contractor and from this office to the several counties of the State for their use is.....	4,483
Advanced copies in sheets for the use of the Judges of the Supreme Court, Committee of Revision, Attorney General.....	13
To the members and officers of the General Assembly...	157
I have also delivered to Public Libraries, Universities and Colleges.....	35
To State and Judicial officers, State Boards, Bureaus, Public Institutions, and all others entitled to the same	60
To the Law Librarian.....	136
Sold from this office.....	951
Leaving on hand October 31, 1882.....	6,165

There being no suitable place unoccupied in the State building for storing so large a number of Statutes, it became necessary to rent a suitable place to store them. I therefore rented a room of John R. Wilson, in the Union building on Maryland street, near this office, at \$20 per month.

To protect the State from loss in case of fire, I insured the volumes in the store room for \$10,675 in the *Ætna Insurance Company*, of Hartford, Conn., at a cost of \$106.75, for one year from August 1, 1882. There is a constant demand from the Trustees of the several townships of the State for copies of the Revised Statutes and in view of the large number on hand and the probability of limited sales in the future, I would respectfully suggest that you recommend to the next General Assembly the propriety of furnishing each Township Trustee with a copy of the Revised Statutes; and, further, that so much of Section 8 of the Act referred to, as restricts the sale of said Statutes to citizens of this State, and the sale of only one copy to one person, be repealed.

The electrotype plates of the Revised Statutes have been forwarded to this office by the publisher and are now the property of the State. In closing my report I beg to thank your Excel-

lency for your uniform courtesy and the invaluable assistance you have rendered me during my entire official term. For the State officers with whom I have served, I can entertain none but the kindest feelings, and the period of our association will be cherished by me among the pleasant recollections of my life. I desire to bear testimony to the faithfulness, efficiency and ability of Edwin L. Hastings, the Superintendent of the Bureau of Public Printing, and of all other employes of this office.

Respectfully submitted,

E. R. HAWN,

Secretary of State.

PUBLIC PRINTING AND STATIONERY.

The present contracts for public printing and stationery were made on the first day of July, 1881. From that date until the close of the fiscal year, ending October 31, 1882 (sixteen months), there was paid on requisitions allowed by the Board of Commissioners of Public Printing and Binding as follows:

PRINTING.

On account Auditor of State	\$1,648 48

THANKSGIVING PROCLAMATION.

Out of a belief that States, not less than individuals, prosper and exert good influence as their citizens repose trust in Divine Providence, and, thankful for blessings conferred, seek Divine guidance in public as well as in private affairs, a custom long since arose of having the President, on behalf of the citizens of the nation, and the Governors of the States, on behalf of the citizens of their respective commonwealths, appoint a day each year for the people to assemble to give thanks to Almighty God for blessings conferred, and to invoke the continued guidance of His good providence. The President having appointed Thursday, the twenty-fourth day of November, instant, for such purpose, it will be convenient to the people of this State that the same day shall be designated by the Governor.

Wherefore, I, Albert G. Porter, Governor of the State of Indiana, do hereby appoint and set apart Thursday, the twenty-fourth day of November, instant, as a day of public thanksgiving and prayer, and I do invite the people of the State reverently to observe it as such.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the seal of the State to be hereto affixed,
[SEAL.] this sixteenth day of November, 1881.

ALBERT G. PORTER.

By the Governor:

E. R. HAWN, *Secretary of State.*

FINES AND FORFEITURES.

To E. R. Hawn, Secretary of State:

SIR—I herewith submit my report of the amount of the fines and forfeitures entered in the Circuit Courts of the State, as reported to me by the clerks thereof. The total amount of fines is \$22,739.14; forfeitures, \$19,505. The clerks of thirty-nine Circuit Courts have failed to make any report to me, as required by section 5664 (R. S. 1881), and, in many instances, only the fines and forfeitures entered at one or two terms of the Circuit Court are reported. I have no power to compel clerks to furnish these reports. The accompanying schedule, marked "Exhibit A," shows from what counties reports have been received from November 1, 1881, to November 1, 1882.

DANIEL P. BALDWIN,

Attorney General of Indiana.

November 6, 1882.

APPENDIX.

INDIANA OFFICIAL REGISTER.

TERRITORIAL GOVERNORS.

Arthur St. Clair, Governor Northwest Territory.

John Gibson, from 1800 to January 10, 1801.

William H. Harrison, from 1801 to 1812.*

Thomas Posey, from 1812 to 1816.

GOVERNORS OF THE STATE.

Jonathan Jennings, from 1816 to 1819.

Jonathan Jennings (second term), from 1819 to 1822.†

Ratcliff Boone, from September 12, to December 5, 1822.

William Hendricks, from 1822 to 1825.

James B. Ray (acting), February 12, to December 11, 1825.‡

James B. Ray, from 1825 to 1828.

James B. Ray (second term), from 1828 to 1831.

There have been several omissions in the Official Register of the Governors of Indiana, extending from the territorial period down to the present time, which, for purposes of historical accuracy, we have deemed it proper to supply.

*Governor Harrison was appointed early in the year 1800, but was not sworn into office until January 10, 1801. John Gibson, the Secretary of the Territory, acted as Governor until his arrival.

†Jonathan Jennings, having been elected to Congress before the end of his second term, resigned the office of Governor September 12, 1822, and was succeeded by Ratcliff Boone, who served until December 5 of the same year.

‡Governor Hendricks, having been elected a Senator of the United States, resigned his office on the twelfth day of February, 1825, and was succeeded by James B. Ray, the Lieutenant Governor, who served as Governor during the remainder of the term.

Noah Noble, from 1831 to 1834.
 Noah Noble (second term), from 1834 to 1837.
 David Wallace, from 1837 to 1840.
 Samuel Bigger, from 1840 to 1843.
 James Whitecomb, from 1843 to 1846.
 James Whitecomb, from 1846 to 1848.
 Paris C. Dunning (acting), from 1848 to 1849.*
 Joseph A. Wright, from 1849 to 1852.
 Joseph A. Wright, from 1852 to 1857.
 Ashbel P. Willard, from 1857 to 1860.
 Abram A. Hammond, from 1860 to 1861.†
 Henry S. Lane, from January 14, to January, 1861.‡
 Oliver P. Morton (acting), from 1861 to 1865.
 Oliver P. Morton, from 1865 to 1867.
 Conrad Baker (acting), from 1867 to 1869.||
 Conrad Baker, from 1869 to 1873.
 Thomas A. Hendricks, from 1873 to 1877.
 James D. Williams, from 1877 to 1880.
 Isaac P. Gray (acting), from 1880 to 1881.§
 Albert G. Porter, from 1881 to —.

LIEUTENANT GOVERNORS.

Christopher Harrison, from 1816 to 1819:
 Ratcliff Boone, from 1819 to 1825.
 John H. Thompson, from 1825 to 1828.

*Governor Whitcomb was elected a Senator of the United States December 27, 1848, and Paris C. Dunning, Lieutenant Governor, served as Governor during the remainder of the term.

†Governor Willard died on the third day of October, 1860, and Abram A. Hammond, the Lieutenant Governor, served as Governor during the remainder of the term, or until January 14, 1861.

‡Governor Lane was elected a Senator of the United States January 16, 1861, and Oliver P. Morton, the Lieutenant Governor, served as Governor the remainder of the term.

§Governor Oliver P. Morton was elected a Senator of the United States on the 23d of January, 1867. On the day following he resigned his office, and Conrad Baker, the Lieutenant Governor, served as Governor during the remainder of the term.

¶Governor Williams died November 20, 1880, and Isaac P. Gray, Lieutenant Governor, served as Governor the remainder of the term.

Milton Stapp, from 1828 to 1831.
 David Wallace, from 1831 to 1837.
 David Hillis, from 1837 to 1840.
 Samuel Hall, from 1840 to 1843.
 Jesse D. Bright, from 1843 to 1845.*
 Godlove S. Orth (acting), 1845.
 James G. Reed (acting), 1846.
 Paris C. Dunning, from 1846 to 1848.
 James G. Reed (acting), 1849.
 James H. Lane, from 1849 to 1852.
 Ashbel P. Willard, from 1852 to 1857.
 Abram A. Hammond, from 1857 to 1860.
 John R. Cravens (acting), from 1859 to to 1863.
 Paris C. Dunning (acting), from 1863 to 1865.
 Conrad Baker, from 1865 to 1867.
 Will. Cumback (acting), from 1867 to 1869.
 Will. Cumback, from 1869 to 1873.
 Leonidas Sexton, from 1873 to 1877.
 Isaac P. Gray, from 1877 to 1880.
 Frederick W. Viche (acting), 1881.
 Thomas Hanna, from 1881 to ——.

SECRETARIES OF STATE.

John Gibson, Territorial, from 1800 to 1816.
 Robert A. New, from 1816 to 1825.
 William W. Wick, from 1825 to 1829.
 James Morrison, from 1829 to 1833.
 William Sheets, from 1833 to 1837.
 William S. Brown, from 1837 to 1841.
 William Sheets, from 1841 to 1845.
 John H. Thompson, from 1845 to 1849.
 Charles H. Test, from 1849 to 1853.
 Nehemiah Hayden, from 1853 to 1855.
 Erasmus B. Collins, from 1856 to 1857.
 Daniel McClure, from 1857 to 1859.

* Jesse D. Bright was elected to the Senate of the United States, March 6, 1865.

Cyrus L. Dunham, from 1859 to 1861.
 William A. Pelle, from 1861 to 1863.
 James S. Athon, from 1863 to 1865.
 Nelson Trusler, from 1865 to 1869.
 Max F. A. Hoffman, from 1869 to 1871.
 Norman Eddy, from 1871 to 1872.
 John H. Farquhar, from 1872 to 1873.
 William W. Curry, from 1873 to 1875.
 John E. Neff, from 1875 to 1879.
 John G. Shanklin, from 1879 to 1881.
 Emanuel R. Hawn, from 1881 to 1883.
 William R. Meyers, from 1883 to ——.

AUDITOR OF PUBLIC ACCOUNTS.

INDIANA TERRITORY.

Peter Jones, commissioned September 5, 1805; resigned in 1810.

William Prince, commissioned April 13, 1810; resigned in 1813.

General W. Johnson, commissioned January 20, 1813; resigned in 1813.

William Prince, commissioned February 8, 1813; resigned in 1813.

Davis Floyd, commissioned June 15, 1813; served till admission of the State into the Union.

AUDITORS OF STATE.

William H. Lilley, from 1816 to 1829.

Morris Morris, from 1829 to 1844.

Horatio J. Harris, from 1844 to 1847.

Douglass Maguire, from 1847 to 1850.

Erastus W. H. Ellis, from 1850 to 1853.

John P. Dunn, from 1853 to 1855.

Hiram E. Talbott, from 1855 to 1857.

John W. Dodd, from 1857 to 1861.

Albert Lange, from 1861 to 1863.
 Joseph Ristine, from 1863 to 1865.
 Thomas B. McCarty, from 1865 to 1869.
 John D. Evans, from 1869 to 1871.
 John C. Shoemaker, from 1871 to 1873.
 James A. Wildman, from 1873 to 1875.
 Ebenezer Henderson, from 1875 to 1879.

REGULATIONS AND FORMS
OF
EXECUTIVE PRACTICE.

To secure accuracy in the transaction of the public business and uniformity in the records of the Executive Department, regulations and forms have, from time to time, been adopted, and are published in this permanent form for convenient reference.

NOTARIES PUBLIC.

The statute authorizing the appointment of notaries public, requires that persons shall be appointed to the office upon a certificate of qualification and moral character from the Judge of the Circuit Court of their counties, respectively. (1 G. & H., p. 445.) When a notary public removes from the county in which he resided at the time he was appointed, he thereby vacates his office. (Opinions of Attorney General, 1873, p. 14.) A new certificate is necessary as the basis of an appointment in another county.

[Form 1.]

THE STATE OF INDIANA,

COUNTY.

To HIS EXCELLENCY,

The Governor of Indiana:

SIR—I respectfully request that I be appointed and commissioned a Notary Public, resident and qualified in this county,

with the jurisdiction and powers conferred by the Acts of June 9, 1852, and February 12, 1855. In support of my application, I submit herewith a certificate of my qualifications and moral character from the Judge of the Circuit Court of the county, as required by the statute.

Dated at _____,
_____, 18--

TO HIS EXCELLENCY,

The Governor of Indiana:

SIR:—I hereby certify that _____, of _____ county is a person of good moral character and qualified to exercise the powers and discharge the duties of a notary public.

_____,
Judge of the _____ Circuit Court.

Dated at _____,
_____, 18--

Commissions in renewal of an appointment are issued at the expiration of a term without a new certificate, where a sufficient certificate remains on file as a part of the record of the former appointment and the applicant continues a resident of the same county.

COMMISSIONERS OF DEEDS.

A person asking an appointment as a Commissioner of Deeds of this State, resident in any other State or Territory, or in any foreign country, must furnish to the Governor satisfactory proof of his character and qualifications. The recommendation of the Governor of the State or Territory in which he resides is desirable as being the best evidence. Commissions in renewal of an appointment are issued upon application and the presumed good character and qualifications of the appointee of a former administration.

JUSTICES OF THE PEACE.

Vacancies in the office of Justice of the Peace are filled by appointment of the Board of Commissioners of the county in which they may occur. The appointment may be properly certified as follows:

[Form 2.]

THE STATE OF INDIANA,

_____ COUNTY.

Be it Remembered, That at a — meeting of the Board of Commissioners of — county, held at —, on the — day of —, A. D. 18—, present Messrs. —, — and —, Commissioners, the following proceedings were had:

[Copy the order verbatim.]

I, —, the Auditor of — county, hereby certify that the foregoing is a full and complete copy of the order of appointment of — as a Justice of the Peace, to fill a vacancy, under authority of the act of March 10, 1875, as the same appears upon the record of proceedings in my custody.

WITNESS, The seal of the Board of Commissioners of the county, and my signature, at —, this — day of —, 18—.

Auditor.

REQUISITIONS FOR FUGITIVES.

In order that due care may be exercised in granting requisitions on the Governors of other States for the apprehension of fugitives from the justice of this State, the following regulations have been adopted:

The application should be in writing, addressed to the Governor, and should contain a statement, in plain and concise language, of the facts in the case, and of the reasons why, in the opinion of the applicant, a requisition should be issued. It

should nominate a proper person to be appointed as the agent to receive the fugitive when apprehended, giving his residence and his official character, if he have any. It should be accompanied by a duly certified copy of the indictment, if one has been found against the offender. If no indictment has been found, there should be furnished a certified copy of a sufficient affidavit made and pending before a magistrate in the county where the alleged offense was committed. It should appear from the certificate of the Clerk of the Circuit Court that the magistrate is an acting Justice of the Peace, in and for the county. The application should be accompanied, also, by an affidavit that the person charged is a fugitive from justice; that is, that he has fled from the State to avoid arrest; and should show, particularly as may be, the time and circumstances of his flight, and in what State or Territory he is; that he fled from the State before an arrest could be made; and that the ends of justice require that he be brought back to this State for trial. The opinion of the Prosecuting Attorney of the Circuit as to the propriety of granting the requisition should also be furnished.

Requisitions will be granted only upon the express condition inserted therein, that the State will pay no part of the expenses incurred in the pursuit and arrest of the fugitive.

The purpose in granting requisitions is to aid in the administration of the criminal law. No requisition will be issued to aid in collecting a debt, or enforcing a civil remedy against a person who has left the State. In all cases of false pretenses, embezzlement, and similar crimes, affirmative evidence, in the form of affidavits, will be required that the real object is not the collection of a private debt.

As notaries public are not magistrates within the meaning of the Federal law, no requisition will be granted upon an affidavit made before a notary public. The law of Congress clearly contemplates an affidavit made in the county where the crime is alleged to have been committed, and before a magistrate having authority to hear the charge when the fugitive shall have been returned by such process to make answer thereto.

If the offense is not of recent occurrence, sufficient reason must be given why the application has been delayed. In no case will a requisition for an offender be granted at the same

time upon the Governor of more than one State. Duplicates of all papers necessary upon the application must be furnished, that one set may be retained in this department and the other attached to the requisition; though but one set need be certified.

[Form 3.]

TO HIS EXCELLENCY,

The Governor of Indiana:

I respectfully ask that you issue a requisition to the Governor of the State of ——— for the apprehension and rendition of ———, who stands charged by an ——— pending in the ——— Court with the crime of ——— committed in ——— county, but who has, since the commission of said offense, and before an arrest could be made upon process issued by said court, and with a view of avoiding the same, fled from the justice of the State of Indiana, and into the said State of ———, where I believe he now may be found.

The ends of justice, in my opinion, require that he be brought back to this State for trial. I herewith present a duly certified copy of the original ——— now on file in the office of ——— in said county. In my opinion, the facts stated in said ——— are true, and I believe that the prosecution of the said ——— would result in his conviction of the crime charged. I nominate ———, of ———, as a proper person to be appointed and commissioned by you as the agent of the State of Indiana to receive the said fugitive when he shall be apprehended, and bring him to this State and deliver him into the custody of the sheriff of said county. The requisition asked for said fugitive is not sought for the purpose of collecting a debt, or enforcing a civil remedy, or to answer any other private end whatever.

Dated at ———, ——— 18—.

THE STATE OF INDIANA,

—————COUNTY.

I, ———, being duly sworn, on my oath say that the facts stated in the foregoing application are true.

Subscribed and sworn to before me, this — day of —, 18—.

To the Governor:

In my opinion it would be proper for your Excellency to issue the requisition asked.

Prosecuting Attorney.

PARDONS.

In order that due care may be observed in the exercise of the pardoning power, the following rules have been adopted, viz.:

First. Petitions for pardons should set forth all the facts of the case, and state the grounds upon which the pardon is asked; and should be accompanied by recommendations of officers and citizens of the county in which the conviction took place; and if the offense was committed in a county different from that in which the trial occurred, there should also be recommendations from officers and citizens of the county in which the offense was committed.

Second. A statement of the substance of the evidence, certified by the Judge who presided at the trial, or the Prosecuting Attorney who conducted the prosecution, must also be furnished.

Third. If a statement of the substance of the evidence can not be obtained from the Judge or Prosecutor, the reason why it can not be obtained should be stated, and then a statement of any other officer or credible person (verified by affidavit), who heard the evidence, may be substituted.

Fourth. If the applicant is confined in a county jail, the opinion of the Board of Commissioners of the county as to the propriety or impropriety of granting the pardon should be furnished.

Fifth. If judgment was pronounced on a plea of guilty, and no evidence heard on the trial of the case, a copy of the indictment or information must be furnished, so that the precise nature of the offense may be understood.

REMISSIONS.

In order that applications for the remission of fines and forfeitures may be brought within the constitutional jurisdiction of the Governor, the following information is furnished: "An act to regulate the remission of fines and forfeitures," approved June 14, 1852 (1 G. & H., 347), provides "That all applicants to the Governor for the remission of fines and forfeitures, shall forward to him with their application, the opinion of the propriety of so doing of a majority of the following officers in the county where the fine was assessed, or the forfeiture occurred, viz: the Clerk of the Circuit Court, Auditor, Sheriff, County Treasurer, and such officers as shall from time to time have the care and custody of the Common School Fund within the county."

The following form of opinion is recommended to be substantially followed:

To the Governor of Indiana:

We, the Clerk of the———Circuit Court, the Auditor, Sheriff and Treasurer of———county, (*and the other officers who may join in the opinion,*) are of the opinion that it would be proper (*or improper*) for you to remit a certain fine assessed (*or judgment taken*) against———, in the———Circuit Court, on the———day of———18——, in a case wherein (*set out the substance of the judgment, and the nature and circumstances of the crime*) for the following reasons: (*setting them out.*)

Where the application is made by sureties, satisfactory proof must be made by affidavits, or other evidence, that they have no indemnity or means of future indemnification.

It having been decided by the Supreme Court (9 Indiana, page 20,) that the power of the Governor to remit fines and

forfeitures is not absolute, and can only be exercised according to legislative direction, a strict compliance with the statute above cited will be required.

Dates, amounts, and other means of identifying and describing the judgment complained of should be accurately and carefully given.

It should be shown that a judgment termed a "forfeiture" is a *final* judgment rendered upon a forfeited bond and not merely an entry of forfeiture. (See 2 G. & H., pages 396—400, especially sections 44, 48, and 50.)

ANNUAL REPORT

OF THE

AUDITOR OF STATE

OF THE

STATE OF INDIANA,

SHOWING THE

RECEIPTS AND DISBURSEMENTS, AND OTHER TRANSACTIONS, OF
THE TREASURY DEPARTMENT, DURING THE FISCAL
YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 5, 1882, examined by the Governor, and transmitted to the Secretary of State to be filed and preserved in his office, and printed, as provided by law, under direction of the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

Filed in the office of the Secretary of State December 5, 1882.

E. R. HAWN,
Secretary of State.

OFFICE OF THE AUDITOR OF STATE,
INDIANAPOLIS, November 1, 1882. }

To *His Excellency*, ALBERT G. PORTER,

Governor of Indiana:

In compliance with law, I herewith respectfully submit for your examination and the consideration of the Legislature, my second annual report of the financial transactions of the State of Indiana, showing the receipts and disbursements of the Treasury from the 1st day of November, 1881, to the 31st day of October, 1882, inclusive, and showing by summary and tabular statements all disbursements of the public funds of the State for the fiscal year named, specifying the various accounts on which all expenditures have been made.

The classification and designation of the funds of the Treasury and the various appropriation accounts are similar to that heretofore adopted and used in this department, excepting only such changes and additions as have been made necessary by later Acts of the Legislature, or as I have believed would insure a more comprehensive and practical system of accounts.

Corresponding to this classification will be found the usual supplementary or itemized statement of the receipts and disbursements of each fund or account separately, showing the balances undrawn or unexpended at the end of the year and close of business, October 31, 1882.

None of the appropriations during the year have been overdrawn, and with few exceptions they have been found sufficient to meet all legal demands and allowances.

The exceptions referred to as insufficient are the appropriations for public printing, office expenses of the Supreme Court and Sheriffs' mileage. To the insufficiency in the appropriation for public printing and Supreme Court expenses, I called attention in my preceding annual report.

As the Secretary of State, and under his supervision the Clerk of the Printing Bureau, will make a full and detailed

report of the allowances on account of public printing already paid and the number and amount of bills for printing required by law yet unpaid, I deem further mention of the subject in this report unnecessary, except to add that the unpaid bills for such printing and stationery at the end of the present fiscal year amount in the aggregate to \$14,000.

This amount can be paid out of the appropriation for the succeeding year, but which, of course, will only continue and possibly increase the deficiency for the year to come.

Inasmuch as all printing done is required by law to be done under contract, this deficiency should be at once specifically provided for by an appropriation for that purpose, and thus leave the appropriation for the year 1883 available for the expenditures of the year for which it was intended.

The appropriation for Sheriffs' mileage has also proven insufficient; and, as in the case of public printing, I was compelled to withhold further payments until the appropriation for the new year became available, out of which it has since been paid.

This deficiency, however, was small, being not to exceed \$500, and if the number of criminals convicted in the various courts and sentenced to the State prisons during the next year should decrease, the present appropriation will be found sufficient.

Many of the appropriations have been equal to or in excess of actual expenditures, and only the three I have mentioned have been found insufficient to meet the demands of the public service.

The first part of this report contains the transactions of the various departments of this office, viz.: that of public accounts, insurance, land and banks.

The report of transactions in the bank department this year embraces the reports of the examination of the various *savings banks*, as well as banks of discount and deposit organized under the laws of the State.

I have also, as required by law, made a careful estimate of the expenditures required for conducting the State government for the years 1884 and 1885, supplementing it with such suggestions to the Legislature as I have believed would result in benefit to the State and its revenues, and aid that honorable body in its labor of legislation.

I have confined suggestions and recommendations to the Legislature to such matters as by law are placed under the exclusive control and supervision of this office, and trust the same will secure your approval and further recommendation.

Part Second of the report is an exhibit or statement, in detail, of all settlements made with County Treasurers during the fiscal year on account of State taxes, common school fund interest, unclaimed fees, docket fees, etc.

It also contains a tabular statement of the net receipts derived from these settlements, and a similar statement of the collection of poll taxes, as shown by the last May and December settlements.

An abstract of assessments for the year 1882, and of taxes computed upon the various county tax duplicates for the same year, concludes the report.

This is the last report I shall have the honor of submitting during my term of office, which will expire January 26, 1883.

Although I have held the office but a single term, it has been of sufficient length to impress me with its great responsibilities and a desire to repay the confidence of the people by a faithful and zealous discharge of official duty.

My relations with all my fellow State officers have been of a pleasant and cordial character, and for the assistance and uniform courtesy which your Excellency and they have so cheerfully extended, I take this occasion to make acknowledgment.

To my deputies, clerks and assistants I am personally grateful, and desire in this report to thank them, one and all, for the faithful and efficient manner in which they have discharged the duties assigned them.

Wishing my successor, Hon. James H. Rice, great success, and hoping this report will secure your approval, it is therefore respectfully submitted.

E. H. WOLFE,

Auditor of State.

RECEIPTS AND DISBURSEMENTS.

Statement showing a condensed exhibit of the balance in the State Treasury by funds, November 1, 1881; also amount received and disbursed from the several funds during the fiscal year ending October 31, 1882:

Amount of cash in the Treasury October 31, 1881 \$740,650 72

The above amount was the aggregate of balances belonging to the various funds of the Treasury as follows:

Balance in General Fund.....	\$278,228 22	
Balance in Common School Fund.....	3,092 20	
Balance in School Revenue for Tuition Fund.....	149,396 08	
Balance in College Fund.....	17,856 14	
Balance in College Fund interest.....	157 28	
Balance in Three Per Cent. Fund.....	1,995 40	
Balance in Unclaimed Estates Fund.	12,435 59	
Balance in Escheated Estates Fund..	1,365 97	
Balance in Swamp Land Fund.....	1,570 02	
Balance in Sinking Fund in excess of bids.....	2,088 52	
Balance in New State House Fund...	272,465 30	
Total.....		<u>\$740,650 72</u>

Receipts from all sources during the fiscal year ending October 31, 1882.

To General Fund	\$1,260,401 64
To School Revenue for Tuition Fund	1,863,219 44
To College Fund.....	12,467 21
To College Fund interest.....	6,400 71
To Swamp Land Fund.....	635 99
To Unclaimed Estates Fund.....	817 46
To Common School Fund.....	125 02
To New State House Fund.....	358,063 02

Total amount of Treasurer's receipts filed during the year.....\$3,502,130 49

Deduct amount of transfer warrants as follows:

School Revenue for Tuition Fund.....	\$234,286 99
New State House Fund.....	200,000 00
	<hr/>
	434,286 99

Leaves net cash receipts to the Treasury during the year..... 3,067,843 50

Add cash balance in Treasury October 31, 1881... 740,650 72

Makes total receipts including balance.....\$3,808,494 22

The amount of warrants drawn on the State Treasury (including transfer warrants) from the several funds, from November 1, 1881, to October 31, 1882, inclusive, are as follows:

From General Fund.....	\$1,436,900 65
From School Revenue for Tuition Fund.....	1,879,726 08
From College Fund.....	11,675 00
From College Fund interest.....	6,370 66
From Swamp Land Fund.....	29 00
From Unclaimed Estates Fund.....	723 42
From Three Per Cent. Fund.....	1,995 40
From New State House Fund.....	207,291 48

Total amount of warrants drawn during year..... \$3,544,711 69

Deduct amount of transfer warrants
as follows:

School Revenue for Tui- tion Fund.....	\$234,286 99	
New State House Fund	200,000 00	
	<u> </u>	\$434,286 99

Leaves net cash disbursements from the Treasury during the year.....	<u>\$3,110,424 70</u>
---	-----------------------

Which being deducted from total receipts leaves cash in Treasury, October 31, 1882.....	<u><u>\$698,069 52</u></u>
--	----------------------------

The balance of cash in Treasury, October 31, 1882,
are the balances of the various funds, as follows:

Balance in General Fund.....	\$101,729 21	
Balance in Common School Fund.....	3,217 22	
Balance in School Revenue for Tui- tion Fund.....	132,889 44	
Balance in College Fund.....	18,648 35	
Balance in College Fund interest.....	187 33	
Balance in Unclaimed Estates Fund.	12,529 63	
Balance in Escheated Estates Fund..	1,365 97	
Balance in Swamp Land Fund	2,177 01	
Balance in Sinking Fund, excess of bids	2,088 52	
Balance in New State House Fund...	<u>423,236 84</u>	<u><u>\$698,069 52</u></u>

ESTIMATED RECEIPTS AND EXPENDITURES

FOR THE

Fiscal Years 1884 and 1885.

The necessary appropriations for the fiscal year ending October 31, 1883, having been provided for by the Legislature of 1881, I submit herewith an itemized statement of estimated expenditures for the years 1884 and 1885. These estimates aggregate a total of \$2,363,780 for the two years named, being \$1,115,590 for the year 1884, and \$1,248,190 for the year 1885.

The year 1885 being a legislative year, I have added \$120,000 to defray the expenses of the General Assembly; \$600 additional for the distribution of laws, and \$12,000 additional on account of public printing. The remaining items of estimated expenditures are uniform in name and amount for each of said fiscal years.

As these expenditures are paid out of the General Fund, it is necessary to estimate the receipts during the same period.

The present total taxable property of the State, both real and personal, including railroads, as now valued for taxation, amounts to \$809,752,050.

The assessment of personal property, however, for the year upon which we are now entering, has not been reported to this office in time for this report, and the above amount of taxable property is based upon the supposition that the assessed value of personal property will not be diminished.

I therefore estimate the annual net receipts at the present rate of taxation and including collections of old delinquencies at \$972,000.

This will be further increased by receipts from insurance taxes, insurance fees, docket fees, miscellaneous receipts, and the earnings of the benevolent and penal institutions of the State, which, during the last year amounted in the aggregate to \$260,000.

This would give as net receipts for each of the years 1884 and 1885 the sum of \$1,232,000.

The excess of receipts over expenditures for the year 1883 was estimated by my predecessor to be \$120,530. This estimated balance will probably not be diminished in view of the fact that the sum of \$200,000 will be retransferred in January next to the credit of the General Fund, as provided in the Special Act of the Legislature, approved April 16, 1881, which will reimburse the State's revenues for some of the extraordinary and large expenditures during the past two years, which were not and could not be included in the former estimates.

This balance, therefore, added to the probable receipts during the year 1884, would give a total for said year of \$1,352,530.

If these receipts are maintained, there will, therefore, remain in the Treasury, after paying the estimated expenditures herein, a balance of \$236,940 at the close of the year 1884, and \$222,470 at the close of the year 1885.

SUGGESTIONS TO THE LEGISLATURE.

ASSESSMENTS AND TAXATION.

The last Legislature revised the tax law of 1872 and remedied many of the defects of that law. There still remain, however, ambiguous and conflicting sections and provisions which receive constructions as varied and numerous, almost, as there are officers enforcing or discharging duties under it. That part of the law relating to the assessment of personal property is especially defective, resulting in exemption from, or permission to escape assessment and taxation of a large proportion of this class of property, leaving the greater burden of taxation to fall upon real estate, and thus destroying all principle and theory of equal taxation, which is presumed to be the basis of the law itself.

Under the authority given me in section 247, I have endeavored as far as possible to correct and prevent these inequalities by preparing suitable forms and instructions and giving opinions and advice in response to numerous inquiries from County Boards and officers and Township Trustees and Assessors.

If these opinions and constructions happen to meet the personal views of these officials, they are adopted; otherwise, not; and it is not an uncommon thing to find the personal property in each township of the same county listed and valued under the same provision of law in entirely different ways.

Unless more definite authority can be given to enforce and compel the acceptance of the construction of these ambiguous and conflicting features of the law as construed by this office, this provision may as well be eliminated. The provision, however, is a good one, if it can be practically enforced.

An Auditor of State who gives personal attention to the duties of his office will soon familiarize himself with the revenue laws of the State; and his official position, coupled with experience and observation, renders him much more competent than others to correctly construe and decide many of the troublesome questions that will arise in any revenue or assessment law, however clear and explicit its provisions may seem to be.

In this connection I desire particularly to call attention to sections 6332 and 6333, Revised Statutes, 1881. The first section allows a deduction from the gross amount of *credits* of all *bona fide* debts owing by the person, company or corporation listing the property, and prohibits this deduction from the value of any item of taxation other than "credits."

The Legislature attempted, in the Assessors' schedule, to define the term "credits," as employed in the law. Section 6,333, above cited, plainly says that no deduction shall be allowed from bonds, stocks, money loaned or money at interest. Nevertheless, this section, in many localities, is entirely ignored, and the value of these items is placed as "credits" by the Assessor, and all manner of indebtedness, real and imaginary, is permitted to be deducted therefrom, and the residue, if any, is returned for taxation.

It is needless to say that this is the hole in which the great bulk of the personal property of the State disappears on the 1st day of April, or when the Assessor calls upon the tax payer, and accounts for the great discrepancy between the aggregate assessed value of real and personal property throughout the State.

By reference to the abstract of assessment of taxable property, it will be seen that the *real estate*, although valued at less than its actual cash value, particularly as to improvements thereon, exceeds the value of personal property over one-half.

I believe that no person who will take the pains to investigate the matter will fail to see that this inequality does not exist in fact, and is to be accounted for largely by reason of the fact that real estate, being visible and stationary, can not, under the law, be concealed or changed from one location to another when the time fixed by law arrives for listing it for taxation.

If it is desired that this concealed property shall appear upon the tax duplicate as other classes of property appear, a careful revision of the two sections above cited will greatly aid in that direction.

In fact, if the inequality already existing in this respect, and increasing from year to year, can not be remedied in any other way, it may be well for the Legislature to consider the propriety of repealing all authority for the deduction of *indebtedness*, now incorporated in our revenue law, and thereby subject to taxation a large amount of property, such as money, bonds, mortgages, stocks, etc., that now not only escape taxation, but that pay larger dividends to the holder than any other class of property.

It would increase the taxable property of the State, decrease the rate of taxation, and result in bringing all classes of property to bear an equal share of the burden of taxation.

RAILROADS.

I desire particularly to call attention to the law relating to the valuation and assessment of railroad property.

This part of the law was originally copied from the Illinois statute, and our blanks for the returns and reports required of railroad companies were adopted from that statute, without change, and are similar in form to those originally used in the revenue department of that State.

During the past few years a conflict has arisen between the railroad companies and some of the local authorities in Indiana as to what constitutes the "right of way" of a railroad for the purpose of taxation. The Supreme Court of the State of Illinois has, in a recent decision, held that land or lots in actual use by a railroad company for side tracks, switches, turnouts, etc., must be regarded, within the meaning of the law, as part of the "right of way," notwithstanding it may have machine shops, depots, roundhouses and other superstructures thereon, used in operating the road.

This is the only judicial construction given to the phrase "right of way," and while it is not given by a court of our own State, it is a construction of a statute of which ours is an exact copy. The State Board of Equalization was governed by this construction in its labors during the past year.

But there has always existed a more serious defect in the enforcement of the law. I refer to that provision which gives cities, towns and townships the right to tax all buildings or improvements located on the "right of way," and that are situated in such cities, towns or townships. The law requires that the tax on such improvements shall be based on a valuation fixed by the State Board of Equalization. Many of the counties, townships, cities and towns have not received heretofore their just proportion of taxes on these *improvements*, for the reason that until the last year the State Board had never been able to fix any valuation thereon, nor had the form of returns heretofore required of railroad companies to the State Board given any information whatever as to the number, character, quality or location of such buildings.

The consequence has been that since 1872 and until the past year, not perhaps to exceed the value of one railroad building in a hundred situated in the State has appeared upon the tax duplicate or paid a dollar of tax.

When the local authorities desired or attempted to tax these improvements, payment was resisted on the plea that all such buildings were included by the State Board in its valuation per mile of *right of way* and main and side tracks, when, as I have shown, the State Board had no official knowledge of the existence or location of such buildings, and could not therefore have considered or included them in the assessment of *right of way* and tracks.

This year I changed the reports so as to require this information, and by reference to the proceedings of the State Board, which are published as an appendix to this report, you will find a list of all such buildings, their character, location and valuation, adding to the tax duplicate property not heretofore taxed, amounting to \$1,073,781.

The valuation of these improvements I certified to the various County Auditors, and instructed them to so place it upon their tax duplicates and compute the taxes of each locality thereon, as in the case of other property. This feature of the law, in my judgment, needs amendment so as to make it the duty of the local authorities, such as the real estate Appraiser and Township or Town Assessor, to value these buildings and improvements in their respective localities. My reason for this

is that the local authorities are better able to ascertain the fair cash value of these buildings and improvements than the State Board, which, in a majority of instances, is obliged to rely upon the figures and values given by the companies themselves.

The proper change or amendment in the law can be made by striking out of sections 94 and 95 (sections 6362 and 6363 R. S. 1881) so much as relates to station houses, depots, machine shops and other buildings or improvements, and substituting, in lieu thereof, a section making it the duty of the proper local authorities to ascertain and determine the value of all such improvements, as in the case of other similar property.

This can be done by the Appraiser when he is engaged in appraising other real estate improvements, and by the Township Assessor or County Auditor, where new buildings are erected or have been omitted, as they are now authorized by law to do in other cases. I deem this change in the law necessary, for the reason that much of this property is still omitted from the tax duplicate, because not reported by the railroad companies, and in order that a more equitable valuation may be secured.

This would leave to the State Board the duty of fixing and determining the value of the property denominated "railroad track," which would include the right of way and all main and side tracks, switches and turnouts located thereon.

The last Legislature enacted special provisions for the taxation of certain foreign corporations, such as express and sleeping car companies, fast freight lines, and telegraph and telephone companies. None of these but two express companies, viz.: the Adams and the United States, and the telephone companies, have paid the required tax. One sleeping car company, viz.: the New York, reported and paid last year, but has not paid this year. The receipts from these sources will be found in their appropriate place in this report.

All sleeping car and telegraph companies and one express company refuse to pay this tax, basing their refusal on the unconstitutionality of the law. They, however, have made the required report, and I have requested the Attorney General to bring suit to recover both tax and penalty. This suit I am informed has been brought. It may be well, however, for the Legislature, through its proper committees, to confer with the

Attorney General and ascertain what changes or amendments are necessary, if any, to render this part of the revenue law effective.

The last Legislature authorized the Auditor of State to adopt, and, as far as practicable, enforce a uniform system of book-keeping by County Treasurers and Auditors throughout the State.

Many counties in the State are using, under contract, various copyright or patent systems of book-keeping, the books being furnished for a term of years. Any attempt on the part of the Auditor of State to interfere with these systems and contracts would, as a rule, have been disregarded, especially in view of the fact that no means of enforcing the system of book-keeping he might prescribe were provided in the section cited. I have, however, insisted upon a uniform method of settlements with the County Treasurers, so far as the State's revenues are concerned, and an examination of the settlement sheets filed in this office during my official term will show that every county has been required to make the same form of settlement and no county has been permitted to deduct from any of the State's revenues, fees or claims not clearly authorized by law. Some of my rulings in this respect have subjected me to criticism, and, in one or two instances, have been the subject of litigation in the courts. One suit, as a test case, is now pending, involving the expenditure or deduction from the State's revenues of a very large sum of money. I deem this case of sufficient importance for special mention in this report.

In the year 1880, one county in the State was permitted or allowed a credit or deduction upon the settlement sheet of over \$7,000, upon the claim that it was for the cost incurred by the county in advertising and printing.

A few other counties received similar credits for smaller amounts, but this particular county had previously been allowed such deductions, varying in amount from three to six thousand dollars. Believing that this credit was wholly unauthorized, as well as unfair to other counties that did not receive or claim like credits, I struck from the form of the sheet this item, and refused to allow further deductions on this account. Hence, the suit referred to as still pending.

It may be well to add in this connection that certain parties

induced a number of County Boards to enter into contracts with them, agreeing to pay a per cent. on all sums or credits thus secured, and under the guise of this item of printing and advertising, proposed to recover by deduction on the settlement sheets from all the funds, excepting county revenue proper, not only the cost of advertising delinquencies, but the expenditures of counties incurred on account of the purchase of tax duplicates, receipts, Assessors' blanks, collection registers, and all stationery used pertaining directly or indirectly to the levy and collection of taxes. One County Auditor, with whose board one of these contracts had been made, wrote to me to know if it would be proper to include the per diem paid Township Assessors and their assistants.

I have in my possession copies of these contracts, and correspondence of the parties, which may be of benefit to your committees in preparing some law that will discourage, if not forbid, the making of contracts of this character.

Certainly, if a county is entitled by law to any reimbursement or credit from the State, it can be obtained as readily without as with a contract of this kind, and, when received, will not be subjected to any diminution on account of such contracts with outside parties.

Sections 222 to 225 inclusive, of the Tax Law (sections 6491 to 6695 of the R. S. of 1881), provide a special method for the sale of all lands which have remained unsold for three years after March 29, 1881.

It would be well to extend the provisions of these sections so as to embrace city taxes, by enacting that City Treasurers shall also furnish a similar list to Prosecuting Attorneys, and that cities shall be entitled to so much of the fund as remains after paying costs and State and county taxes.

Sections 253 to 257 inclusive, of the Act of 1881, which gave opportunities to delinquents to compromise back taxes, expired by limitation on April 1, 1882.

These sections were productive of much benefit to the State while they were in force.

I would recommend that a provision substantially like the following should be adopted:

Whenever taxes have been delinquent for five years or more, prior to 1881, and the real estate on which such taxes are a lien

has remained unsold for five years, the County Treasurer shall sell such lands to the highest bidder for cash.

That would have the effect to clear up all the old delinquencies prior to the Act of 1881.

INSURANCE.

If there is any one law on our statutes that needs revision and amendment more than another, it is the insurance law. The absence of suitable laws for the protection of the people from deception and imposition has made Indiana the favorite field for the successful operation of every conceivable form of swindling insurance. Organizations from other States, that have neither character nor standing at home, can with impunity come into this State, plant their agencies, and, after a few months or years of business, withdraw, leaving hundreds of victims with nothing but a so-called policy, not worth the paper on which it is written.

Nor is this class of insurance organizations confined to other States only. Our own State has been furnishing her quota of visionary insurance schemes. This State originated the marriage benefit craze, and there still exist here many organizations or associations of equally questionable character.

While I do not wish to be understood as saying that all these organizations are fraudulent, or that the managers and officers conducting the affairs of some of them are not honorable, upright citizens, it is an incontrovertible fact that so few are good and worthy of credit and patronage, and so many are fraudulent and worthless, that all are brought into disrepute.

So apparent is this that some of these organizations have, through their officers, requested me to make a special recommendation to the Legislature, asking for the enactment of a law that will bring all these Indiana mutual companies, as well as those from other States, under State supervision, and that will drive and keep out such as are unworthy of patronage.

Many of these companies or associations are organized under the Voluntary Association Act passed by the last Legislature. I do not believe that, aside from the benevolent orders and societies which do an insurance business, confined exclusively to the members of these orders, authority can be found in this act

for the organization of other insurance associations. Yet most of the companies from our own State claim not only to be organized under this act, but every fraudulent association from other States assumes the right to file its articles of association under the same act with the Secretary of State; and, armed with his certificate of such filing merely, the same is conspicuously displayed in the advertised literature of the organization as a compliance with the law and a recommendation of the State that the concern is what it purports to be legal and reliable.

I believe that insurance legislation should not have solely for its object the raising of revenue merely from foreign insurance companies; but if revenue alone were the object, manifest injustice is done reliable and sound companies, who comply with the general insurance law, pay the required taxes and fees, which go into the State Treasury, and yet are compelled to compete for business with companies which not only pay nothing, but do not comply with any law. Already this injustice is having the effect of driving out of the State a number of old and established companies, or the abandonment of much of the territory heretofore worked by them, thereby diminishing the revenues of the State.

By reference to the statement of receipts to the General Fund contained in this report, it will be seen that the total receipts from taxes and fees paid by insurance companies during the last fiscal year amounted to \$68,049.11. To this sum will be added over \$5,000, which was not received and paid in time for this report.

The total sum paid is more than sufficient to defray the annual expenditures of the administrative and executive department of the State, which includes the salaries of State officers, their deputies, clerks, assistants, janitors, etc.

The present insurance law regulating foreign insurance companies should be amended so as more effectually to punish all agents of foreign State companies who transact the business of insurance without the required authority.

Place the enforcement of this feature of the law in the hands of the Auditor of State, with his interest in having it enforced, and you will find the State revenue not only largely increased and our citizens protected by better insurance, but the State

will avoid the reputation abroad of encouraging the organization of fraudulent associations, now so numerous.

It is true that mutual companies can not comply with the requirements of our law relating to invested capital, for the reason that they have none and do not claim to have, but regulations and requirements adapted to this class of associations, like those now in force in the State of New York and some other States, can be incorporated in our insurance law, and all insurance organizations, excepting those of a purely benevolent character, and the local farmers' insurance companies, can be brought under some kind of State supervision and regulation.

A bill was introduced in the last Legislature authorizing insurance companies whose business is confined exclusively to the insurance of plate glass against loss by accident, to transact business in this State, with a required invested capital of one hundred thousand dollars. The bill failed, in my judgment, for want of proper consideration. No company in the United States, so far as I know, that transacts an exclusive plate-glass insurance business, has a greater invested capital than one hundred thousand dollars, this sum being deemed amply sufficient for the protection of policyholders, and in none of the States is any greater sum required.

Our law makes no distinction between fire and life companies and plate-glass accident insurance companies, but all alike are required to possess invested assets or capital of not less than two hundred thousand dollars.

I trust the Legislature will give the plate-glass insurance bill favorable consideration, so that our citizens may have the benefit of honorable competition in securing fair rates and good insurance on this class of property from companies that can and will in other respects comply with our law.

STATE DEBT.

The condition of the State debt is fully shown in this report.

During the last two fiscal years the debt has been diminished by the payment of the War Loan bonds, amounting to \$139,000, and one unsurrendered internal improvement bond, the principal and accrued interest of which amounted to \$5,563.16.

The remaining items of the State's indebtedness are unchanged, excepting the extension and consolidation of the Purdue University bonds, as authorized by special act of the last Legislature.

By reference to the State debt statement, it will be seen that \$585,000 of the Temporary Loan bonds fall due in April, 1889, but are payable at the pleasure of the State at any time after April 1, 1884.

If there are no extraordinary or unusual drafts upon the general fund, probably \$200,000 of this debt can be paid and canceled April 1, 1884, without detriment to the State's revenues, but it may be well for the Legislature to consider the propriety of levying a special sinking fund tax of two cents on the hundred dollars for the purpose of paying off the remainder of the debt.

The revenue derived from such a tax would, in my judgment, be amply sufficient, in two or three years, with the surplus available in the State Treasury, to cancel this part of the debt, and would result in an annual saving of over \$29,000 in interest.

In my estimate of needed expenditures, I have not included the amount necessary to pay off the Coghlen internal improvement bonds, which are now awaiting the decision of our Supreme Court as to the question of interest. These bonds, in principal and interest, amount to \$134,149.92, which, if paid out of the surplus revenue of the present year, will furnish an additional reason for levying the special tax above referred to.

THE LAND DEPARTMENT.

The Act creating this department, entitled, "An Act providing for the concentration of Land Records in the office of the Auditor of State, and prescribing the duties of the Auditor of State in connection therewith, and the appointment of a clerk thereof, and declaring an emergency, approved March 3, 1877," should be so amended as to require all patents made by the State for the conveyance of lands, to be recorded in this department of the office of the Auditor of State.

The aforesaid Act required the Secretary of State to turn over to this office, "all the records pertaining to the swamp lands, State University lands, Saline lands, Michigan road

lands," etc., but did not change the previous law which required all State patents to be recorded in the office of the Secretary of State. Consequently the Secretary of State has not been able fully to comply with this law, inasmuch as he is compelled to retain in his office the Land Records in which he is recording the State patents.

COLLEGE FUNDS.

I wish especially to call the attention of the members of our Legislature to the very insufficient manner in which the records of the College Fund and other trust funds of the State have always been and of necessity are still being kept.

By the custom established by the officers who first had charge of the State's trust funds, such as the Sinking Fund, Surplus Revenue Fund and College Fund, the only State record made of mortgages accepted by the State as security for the moneys loaned, was simply a tabular register giving "No. of Loan," "Date," "Name of Borrower" (the wife's name not being given at all), and the "Amount."

The mortgages were then sent to the counties where the property mortgaged was situated, and there entered of record in full in the office of the County Recorder, and then returned and placed on file in the proper State office.

This precedent has been followed by all of my predecessors, and not having sufficient clerical force in the office to go back and make a complete record of all the current mortgages now on file in the office, and to do the work that should have been done by my several predecessors, I have been compelled to follow their precedent.

According to the custom, when these mortgages have been paid in full the Auditor of State, or other custodian of the funds, has certified on the back thereof that the same have been fully paid and satisfied, and has authorized the County Recorder, where the mortgages were recorded, to release the same.

The Auditor of State has kept no record of the release, except that occasionally when a mortgage has been satisfied the words "paid" or "satisfied" have been entered on the margin of the tabular register hereinbefore mentioned.

In many instances the persons who made the final payment of such mortgages, instead of taking the mortgages to the County Recorder for him to enter a release of record, have carried them home, supposing that they had no further duty in the premises to perform. Consequently many of these mortgages, which have been paid in full during the last fifty years, remain unreleased on the county records. In many instances the mortgages have been lost, thus leaving no evidence of their having been paid, except that in some instances the words "paid" or "satisfied" have been entered on the margin of the tabular register in this office, as before mentioned.

As the mortgages have never been recorded in full in this office we have no description of the real estate embraced in those that have been released and surrendered to the individuals making final payment. Therefore we can not certify that a mortgage on any particular tract of land has been released, but simply "that a certain mortgage, No. —, executed on the — day of —, by — to the State of Indiana, for — dollars of the — fund of said State, has been fully paid and satisfied." This I deem an uncertain and unsatisfactory release, but it is all that can be given. Now, so far as the past is concerned, I know of no remedy; but for the future there is an easy remedy.

I, therefore, respectfully suggest that the General Assembly pass an Act authorizing and requiring the Auditor of State to make a complete record of all unpaid mortgages now on file in the office, and at the same time make an appropriation sufficient to pay for the same, and then require him to make complete record of all new mortgages when accepted. Then when a mortgage is paid in full, the Auditor of State should enter his release on the record, as well as on the mortgage itself, so that if the mortgagor should fail to have his mortgage released in the County Recorder's office, and the mortgage should be lost, a certified copy of the release in the office of the Auditor of State could at any time in the future be obtained. In this way much trouble and vexation which now exist would be avoided.

I further suggest that there are many tracts of land throughout the State, which have been mortgaged to the College Fund and offered for sale for non-payment thereof, that have failed

to sell, for the reason that no person would pay the amount due the fund for the land; and this is also true with reference to other lands belonging to the State.

I, therefore, suggest that the General Assembly pass an Act providing for the appointment of a Board of Appraisers, to appraise all lands mortgaged for College Funds and forfeited to the State for non-payment thereof, together with all miscellaneous tracts belonging to the State, and not used for specific purposes (and not including swamp, saline and university lands), such as escheated lands, and a few other tracts deeded to the State; and that the Auditor of State be required to offer for sale all such lands, for a sum not less than the appraised value.

My predecessor made a similar recommendation in his annual report. Certainly it can not result in any benefit either to the trust funds, or the State, to permit these lands to remain uncultivated and unsold, subject to being trespassed upon by any who choose, and the buildings and timber, if any thereon, removed or destroyed.

If a statute such as has been above suggested, were enacted, a considerable sum now practically lost would be added to the principal of the fund for which these lands were forfeited, or escheated to the State, and would be then charged to the new purchaser on the tax duplicate, thus adding a considerable sum to the revenues of both State and county.

Trusting that the foregoing suggestions will aid the General Assembly in its labor of legislation, the same are

Respectfully submitted,

E. H. WOLFE,

Auditor of State.

THE STATE DEBT.

The Condition of the Public Debt of the State at the Date of this Report, October 31, 1882, is as follows:

FOREIGN DEBT.

Five per cent. certificates, State stock	\$14,469 99
Two and one-half per cent. certificates, State stock	2,355 13
Five per cent. bonds held by and payable to the Brooklyn Savings Bank, of Brooklyn, N. Y., due December 1, 1889, but payable at the pleasure of the State after April 1, 1884.....	200,000 00
Five per cent. bonds held by Winslow, Lanier & Co., New York, due April 1, 1889, but payable at the pleasure of the State after April 1, 1884.....	385,000 00
Five per cent. bonds held by Purdue University, due April 1, 1901..	340,000 00
Twenty-four Internal Improvement bonds, past due.....	24,000 00
Six five per cent. Internal Improvement bonds, due July 1, 1886, held by the United States	6,000 00
Total.....	\$971,825 12

DOMESTIC DEBT.

School Fund bond No. 4, January 20, 1871.....	177,700 00
School Fund bond No. 5, May 3, 1873.....	175,767 07
Total.....	<hr/> \$3,904,783 22
Total State debt.....	<hr/> <hr/> \$4,876,608 34

STATEMENT

OF

Valuation of Real and Personal Property in the State.

The total valuation of real and personal property in the State during the last twenty-five years, together with the increase or decrease each year, is shown as follows:

YEAR.	Total.	Increase.	Decrease.
For the year 1857	\$317,932,958	\$38,900,749
For the year 1858	318,204,964	272,006
For the year 1859	435,267,862	117,162,898
For the year 1860	455,011,378	19,643,516
For the year 1861	441,562,339	\$13,499,039
For the year 1862	421,406,936	20,155,408
For the year 1863	443,455,036	22,048,100
For the year 1864	516,805,999	73,359,963
For the year 1865	567,381,553	50,575,554
For the year 1866	578,484,109	11,102,556
For the year 1867	577,869,079	615,030
For the year 1868	587,970,549	10,101,470
For the year 1869	655,521,479	67,550,930
For the year 1870	662,283,178	6,761,699

LAND DEPARTMENT.

This department is still in its infancy, and, with only one clerk to concentrate the various land records of the State into one office; to arrange and classify them; to make the indexes which ought to have been made at the time, and as fast as the records were made; to make certified copies of entries, patents, etc., and answer the numerous inquiries made concerning titles to land, and unreleased mortgages to the several trust funds, can not be made what the law contemplates it should be.

However, the work has progressed as rapidly as could be expected under the circumstances.

THE WABASH AND ERIE CANAL RECORDS.

These records, together with the original patents, which have never been delivered to the purchasers, are still in the hands of the Canal Receiver at Terre Haute. We recently applied to the Attorney General to take such steps as were necessary to procure the possession of said records and patents, in order that they might be placed in the Land Department, where they properly belong. In accordance therewith the Attorney General made a demand for such records and patents, but the officer having them in charge refused to give them up. No reflection is here intended to be made on said officer for such refusal, as he seems to be acting in obedience to an order of the United States Circuit Court.

Many inquiries are being made to this office concerning the canal lands, which we are unable to answer for the reasons above stated. We are frequently called upon to make certified copies of the original entries of said lands, and also for the original patents, and always have to refer the parties to the aforesaid office at Terre Haute.

Our inability to answer the many inquiries made to this department (where the canal land records are supposed to be, as required by law), and to make such certified copies as are required, and the consequent disappointment to the people owning or claiming these lands, is what prompted us to ask the Attorney General to take such steps as he deemed necessary to secure possession of said records and papers.

It is hoped that the matter may be speedily adjusted, so that the canal records and papers may be added to this department, and thereby made, so far as the concentration of the public land records is concerned, as complete as the law contemplates.

SWAMP LANDS UNPATENTED.

The following is a list of swamp lands that have never been patented, as shown by the records of this office. Some of these tracts have undoubtedly been sold many years ago by the proper county officers, but, for some unaccountable reason, the State has never conveyed them by patents to the purchasers.

We hope that all persons owning or claiming such tracts, for which patents have not been issued, will make proof to this office of their purchase and ownership, so that the proper patents may be issued, and the burden of carrying them forward in the annual report removed.

Allen County.

DESCRIPTION OF THE TRACT.				CONTENTS.

UNIVERSITY LANDS.

The following is a list of the University Lands remaining unpatedented.

Many of these lands have been sold and final payment made therefor, but the purchasers, either through preference or neglect, continue to hold their certificates of final payment instead of presenting them to this office and taking the proper patents therefor. (See remarks concerning Swamp Lands unpatedented, which apply with equal force to these lands.)

And many of these lands, as well as other lands belonging to the State, can not be sold, for the reason that the last Legislature failed to provide for their re-appraisement as recommended by my worthy predecessor in his last annual report.

The appraisement of these lands now on file in this office was made when the price of real estate was much higher than at present, and in consequence of the depreciation in value thereof, the county officers are unable to dispose of them.

UNIVERSITY LANDS—Continued.

Crawford County.

THE KANKAKEE LANDS.

The Kankakee lands proper are those bordering on the Kankakee River, in the counties of St. Joseph, Laporte, Starke, Jasper, Newton, Lake and Porter.

This river is a very crooked, slow and sluggish stream, passing through a very level country, and a great portion of the year the water is even with and over its banks, and much of the surrounding country is overflowed. When the government survey was made, several thousand acres, probably covered with water at that time, and since reclaimed or partially reclaimed, was meandered out and included as the bed of the river. The title to these lands so meandered out and included as river bed,

as well as the beds of all meandered lakes and rivers within the State, is questioned. Do they belong to the United States, or the State of Indiana, or to the adjacent owners?

THE WHITTLESEY SURVEY.

In 1879 the General Assembly of the State, by joint resolution No. 22, authorized the Governor, Auditor, and Secretary of State "to appoint some suitable person to survey and plat certain lands belonging to the State, reclaimed by the drainage of Beaver and English Lakes and the Kankakee River and the Calumet River."

In accordance with said resolution, Mr. A. T. Whittlesey, of Evansville, was appointed to make such survey, and during the summer of 1879 he surveyed the lands "reclaimed by the drainage of English Lake and the Kankakee River, in township thirty-three (33) north, of range three (3) west," and made report of his survey to this office, and the field notes and plats of said survey are now on file in the land department.

No further surveys of the lands mentioned in the resolution were made. The State has paid all the expenses of this survey, so far as made, and, without further legislation, it is of no use or benefit whatever.

There are two ways in which this survey may be made useful, and two ways by which these lands may be brought into market:

First. The report of the said survey, or a copy thereof, might be presented to the General Land Office at Washington, and by that office accepted and approved and adopted as the Government survey, and the lands made subject to entry at that office; *i. e.*, if the United States own said lands.

This, however, depends upon an appropriation of funds being made by the General Assembly of the State for the purpose of making a copy of the record of said survey and presenting the same to the General Land Office, and upon the acceptance and approval of said survey by the Commissioners of Lands when so presented.

And, all this being done, it would only place in market the lands covered by the Whittlesey survey.

Second. If our Senators and Representatives in Congress would secure the passage of an act ceding and conveying to

the State all the territory within its limits meandered out as lakes and non-navigable rivers, the State might then proceed to have all such lands which have been and can be reclaimed, surveyed and entered of record in the Land department of this office, and thus placed in market, in which case the Whitteley survey could be made available.

The latter method of placing these lands in market is much preferable, for the reason that it would include all unsurveyed lands of the State, and would bring the revenue derived from the sale thereof into the State Treasury.

In connection herewith we subjoin the following letter, which will explain itself:

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
WASHINGTON, D. C., August 15, 1881. }

E. H. Wolfe, Esq., Auditor of State, Indianapolis, Indiana:

SIR—In reply to your letter of the 3d instant, asking if the land in Indiana, meandered by the United States surveys as lakes and rivers has been ceded to the State by Congress, and; if not, whether such land can be disposed of, I have to state that the survey and disposition of such land have been suspended by this office and the question regarding the propriety of transferring to the State any title thereto now in the United States has been laid before Congress. No action by Congress, however, has yet been had in the premises.

You desire to know if any part of the Kankakee River, in the State of Indiana, has been declared navigable by Congress. I would say in reply that this office has no information in regard thereto.

Very respectfully,

N. C. McFARLAND,

Commissioner.

We hope that our Senators and Representatives in Congress will use their best efforts to have the title to all such lands transferred by the United States to the State for the reasons before mentioned.

INSURANCE DEPARTMENT.

I herewith submit a statement showing the gross receipts, losses paid, receipts less losses, and tax of foreign insurance companies transacting business in this State, for the year ending June 30, 1882. Also tabular statements giving the name of each company transacting business in the State up to and including June 30, 1882, and showing in detail the amount received, losses paid and tax paid by each.

Statement for the Six Months ending December 31, 1881.

FIRE.

Gross receipts	\$1,018,410 25
Losses paid.....	610,461 52
Receipts less losses.....	456,580 25
Tax	13,697 18

LIFE.

Gross receipts	\$598,961 98
Losses paid.....	271,275 17
Receipts less losses.....	333,874 70
Tax	10,016 23
Tax upon fire and life companies for six months ending December 31, 1881	23,713 41

Statement for Six Months ending June 30, 1882.

FIRE.

Gross receipts	\$913,596 21
Losses paid.....	410,805 00
Receipts less losses.....	502,971 61
Tax	14,795 55

LIFE.

Gross receipts	\$580,654 08
Losses paid.....	274,711 61
Receipts less losses.....	319,494 74
Tax	9,584 81
Tax upon fire and life companies for six months ending June 30, 1882.....	24,380 36

*Statement of Gross Receipts, Losses Paid and Tax Paid by Fire and
Life Companies of other States and Foreign Countries
in this State for the year ending June 30, 1882.*

Gross receipts	\$3,111,622 52
Losses paid.....	1,567,253 30
Tax	48,093 77

FIRE INSURANCE COMPANIES.

RECEIPTS AND LOSSES.

Tabular statement of Receipts and Losses from July 1, 1881, to January 1, 1882, of each Fire Insurance Company doing business in this State.

BANK DEPARTMENT.

During the year I have caused an examination to be made of the various banks of discount and deposit and savings banks, as required by section 18 of the act approved February 7, 1873, and section 47 of the act approved May 12, 1869, and for that purpose appointed, with the approval of the Governor, Messrs. Carl Puckett, David W. Kinsey,^{*} Thad. Huston, J. H. Vinning, Joel G. Sayre and William H. Hay, and directed them to make a thorough examination into all the affairs of the banks organized and in operation under said laws.

These gentlemen have faithfully performed the work assigned them, and a full and detailed report of the condition of these banks are now on file in this office, and are presented herewith.

The reports of the Examiners are given in the following order:

Banks of Discount and Deposit.

NAME OF BANK.	LOCATION.	CAPITAL STOCK.
Adams County Bank	Decatur	\$75,000 00
Citizens' Bank	Hartford City	25,000 00
Citizens' Bank	Noblesville	50,000 00
Citizens' Bank	Portland	30,000 00
Citizens' Bank	Rockport	67,800 00
Citizens' Bank	Union City	32,000 00
Citizens' State Bank	Newcastle	130,000 00
Citizens' State Bank	Petersburg	25,000 00
Commercial Bank	Union City	60,000 00

APPENDIX.

PROCEEDINGS

OF THE

Indiana State Board of Equalization

IN THE

ASSESSMENT AND EQUALIZATION OF RAILROAD PROPERTY

FOR THE

PURPOSE OF TAXATION,

FOR THE YEAR 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER, LITHOGRAPHER AND BINDER.

1882.

PROCEEDINGS OF THE

State Board of Equalization,

FOR THE YEAR 1882.

STATE OF INDIANA,
OFFICE OF THE AUDITOR OF STATE,
INDIANAPOLIS, June 19, 1882. }

Agreeably to an act of the General Assembly of the State of Indiana, entitled "An act concerning Taxation," approved March 29, 1881, the Board of Equalization, within and for the State of Indiana, convened at the office of the Auditor of State, and organized as required by law.

All members being present, to-wit.: Albert G. Porter, Governor; Emanuel R. Hawn, Secretary of State; Edward H. Wolfe, Auditor of State; Roswell S. Hill, Treasurer of State; Daniel P. Baldwin, Attorney General.

The members of the Board and John W. Coons, Deputy Auditor of State, as Secretary of the Board, took the oath as required by law, as follows:

We, and each of us, do solemnly swear that we will support the Constitution of the United States and the Constitution of the State of Indiana, and that we will faithfully and impartially discharge our duties as members of the State Board of Equalization to the best of our ability.

ALBERT G. PORTER, *Governor.*
THOMAS HANNA, *Lieutenant Governor.*
E. R. HAWN, *Secretary of State.*
E. H. WOLFE, *Auditor of State.*
ROSWELL S. HILL, *Treasurer of State.*
DANIEL P. BALDWIN, *Attorney General.*

I, John W. Coons, do solemnly swear that I will support the Constitution of the United States and the Constitution of the State of Indiana, and that I will faithfully perform my duties as Secretary of the State Board of Equalization to the best of my ability.

JOHN W. COONS.

STATE OF INDIANA, }
MARION COUNTY, } ss:

Before me, the undersigned, personally appeared the within named, Albert G. Porter, Thomas Hanna, Emanuel R. Hawm, Edward H. Wolfe, Roswell S. Hill and Daniel P. Baldwin, members of the State Board of Equalization, and John W. Coons, Secretary of the State Board of Equalization, and were sworn according to law and subscribed their names hereto.

In witness whereof, I hereunto set my hand and notarial seal, this 19th day of June, A. D. 1882.

[L. S.]

WILBUR F. BROWDER,

Notary Public.

On motion of Hon. Thomas Hanna, Albert G. Porter, Governor, was unanimously chosen President, and on motion of Hon. E. H. Wolfe, Auditor of State, John W. Coons, Deputy Auditor of State, was unanimously chosen to act as Secretary of the Board.

It was further moved by Hon. E. H. Wolfe, that the Secretary of the Board be instructed to notify all companies who have failed to file their annual returns, to file the same on or before the 26th inst. And also, that the Secretary notify all railroad companies desirous of making statements in behalf of their respective companies before the Board, that next week, commencing June 26, and ending July 1, has been set aside for the purpose of hearing such statements.

And thereupon the Board adjourned until Monday morning, June 26, 1882.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

MONDAY, June 26, 1882.

The Board met pursuant to adjournment.

Present the Honorable members, Albert G. Porter, Thomas Hanna, E. R. Hawn, E. H. Wolfe and D. P. Baldwin.

The Secretary of the Board read communications received from railroad companies desirous of being heard before the Board of Equalization; and also reported that the Indianapolis & St. Louis, Springfield, Effingham & Southeastern, and Bloomfield Railway, Chicago & West Michigan, and the New York, Chicago & St. Louis, have failed to file their annual returns; and that all companies delinquent in their returns at the previous meeting were notified by him to file the same on or before the 26th inst.

George J. Bippus, Esq., representing the Chicago & Atlantic Railway, appeared before the Board and made statement. Mr. Bippus was requested by the Board to file statement of amount of work done on said road prior to April 1, 1882.

The Louisville, Evansville & St. Louis Railway, by Bluford Wilson, Esq., General Solicitor of said road, made statement in behalf of this company.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

TUESDAY, June 27, 1882.

The Board met pursuant to adjournment.

Present the following members: Albert G. Porter, Thomas Hanna, E. H. Wolfe, E. R. Hawn and R. S. Hill.

Colonel James F. How, Third Vice President of the Wabash, St. Louis & Pacific Railway, Hon. Volney T. Malott and Geo. S. Grover, Esq., appeared before the Board, representing the Wabash, St. Louis & Pacific, Indianapolis, Peru & Chicago, Eel River, Cairo & Vincennes, Havana, Rantoul & Eastern, Chicago, Cincinnati & Louisville, and Michigan City & Indianapolis Railroads.

They made statements in behalf of the above named companies, asking for a reduction of the valuation of the rolling stock, main and side tracks, and the Board not being fully advised in the premises, took the matter under advisement.

Col. How, by permission of the Board, filed written statement, showing the costs of steel rails in 1881 and 1882, and upon request of Mr. Grover, leave is granted them to file supplemental return within fifteen days.

The Cleveland, Columbus, Cincinnati & Indianapolis Railway, by G. M. Beach, Esq., General Road Master, and Hon. H. H. Poppleton, General Attorney of said road, made their statement in behalf of said company, asking that a reduction in the valuation of this road be made, and the Board not being fully advised in the premises, took the matter under advisement, and upon request of Mr. Beach, leave was given him to file written statement, giving reasons why a reduction in the valuation or appraisement of this road should be granted them.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

WEDNESDAY, June 28, 1882.

The Board met pursuant to adjournment. All members present.

Mr. John W. Davis, representing the Baltimore & Ohio, and Chicago Railway, appeared before the Board and filed written statement, asking for a reduction of the appraisement of the main track of said road from \$9,000 to \$8,000 per mile.

The Chicago & Grand Trunk Railway, by Judge Thomas S. Stanfield, made statement asking that the appraisement of rolling stock of said road be reduced so that the same shall correspond with appraisement of rolling stock of other roads, and upon his request leave was granted to file a supplemental schedule of the rolling stock of said road.

Mr. C. A. Beach, representing the Ohio and Mississippi Railway, made a statement before the Board in behalf of said company, and the Louisville & Nashville Railway, by S. B. Vance, Esq., made statement asking for a reduction of the appraisement of said road, giving his reasons therefor.

And the Board not being fully advised in the premises, took the matter under advisement.

Judge A. L. Osborn, representing the Michigan Central and the Joliet & Northern Indiana Railroads, made a statement in behalf of said companies.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

THURSDAY, June 29, 1882.

The Board met pursuant to adjournment. All members present.

A. J. Castatter, Esq., representing the Lake Erie & Western Railway, made statement in behalf of said company, and filed written schedule of earnings and assessment for taxation of various railroads in Indiana, and asked for a reduction in the appraisement of main and side tracks of said road, and giving his reasons therefor.

The Lake Shore & Michigan Southern, by Judge Mitchell, appeared before the Board and asked that the south branch of this road be appraised so that the same bears 60 per cent., and the northern branch 40 per cent., of the valuation of said road.

The Columbus, Chicago & Indiana Central Railway, and the Indianapolis & Vincennes, by H. H. B. DuBarry, Esq., also made statement, asking that these roads be appraised so that the same shall correspond with appraisements of other roads, of same standing.

The Jeffersonville, Madison & Indianapolis Railway, by E. W. McKenna, Esq., Superintendent of said road, made state-

ment, asking for a reduction of the appraisement of the same, and giving his reasons therefor.

The Pittsburgh, Ft. Wayne & Chicago Railway, by L. L. Gilbert, Esq., appeared before the Board and made statement in behalf of said company, asking for a reduction in the appraisement of said road, and files written statement setting forth reasons for such reduction, and the Board not being fully advised in the premises, took the matter under advisement.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

FRIDAY, June 30, 1882.

The Board met pursuant to adjournment.

Present the following members: Albert G. Porter, Thomas Hanna, E. R. Hawn, E. H. Wolfe and R. S. Hill.

The Cincinnati, Hamilton & Indianapolis Railway, by R. D. Marshall, Esq., General Attorney of said road, appeared before the Board and made statement in behalf of said company, and also in behalf of the Richmond & Miami Railway, asking for a reduction of the appraisement of said roads.

The Peoria, Decatur & Evansville Railway, by George L. Bradbury, General Manager, and J. S. Stevens, Esq., made statements in behalf of said road.

The Fort Wayne & Jackson Railway, by Eugene Pringle, Esq., Attorney, and M. D. Woodford, General Superintendent of said road, made statements and filed written reasons showing why a reduction in the appraisement of said road should be granted.

The New York, Chicago & St. Louis Railway, by James E. Neal, Attorney of said road, made statement showing that the same is yet in an incomplete condition, and asks that the Board take this fact into consideration when it assesses and values the same.

The Chicago & West Michigan Railway, by Ed. Hawkins, Esq., made statement similar to that made by Mr. Neal.

The Toledo, Cincinnati & St. Louis Railway, and the Frankfort & State Line, by Hon. James H. Rice, appeared before the Board. Mr. Rice asked for a reduction in the appraisement of the Toledo, Cincinnati & St. Louis Railway, so that the same shall correspond with appraisements of other roads of same standing; and also shows the incomplete condition of the Frankfort & State Line Road; and the Board not yet being fully advised in the premises, took these matters under advisement.

And thereupon the Board adjourned until Friday morning, July 7, 1882, at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

FRIDAY, July 7, 1882.

The Board met pursuant to adjournment. All members present.

M. E. Ingalls, Esq., President of the Cincinnati, Indianapolis, St. Louis & Chicago Railway and branch lines, appeared before the Board and made statement in behalf of said road, asking that the main track be reduced from \$9,500 to \$8,500, and side track from \$3,000 to \$2,500 per mile, and that the appraisement of the Lawrenceburg branch be reduced so that the same shall correspond with appraisements of other branch roads of similar standing; and further, that the appraisement of the Cincinnati, Lafayette & Chicago Railway be reduced from \$7,500 to \$6,000 per mile for main track, and \$500 per mile on side track; and also made a statement in relation to the Vernon, Greensburgh & Rushville Road, giving his views as to the valuation of same.

The Cincinnati, Wabash & Michigan Railway, by Owen Rice, Esq., made statement, also asking for a reduction of the main and side tracks of said road—main track from \$4,500 to

\$4,000, and side track from \$2,500 to \$2,000 per mile, and explaining the condition of the north end or new part of said road, and the Board not being fully advised in the premises, took the matters and things under advisement.

And it was unanimously agreed upon, that the Board commence on the assessment and equalization of railroads on Monday next.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

SATURDAY, July 8, 1882.

The Board met pursuant to adjournment.

Present the following members: Albert G. Porter, Thomas Hanna, E. R. Hawn, E. H. Wolfe and D. P. Baldwin.

Matters in relation to equalization and taxation were discussed by the members of the Board.

And thereupon the Board adjourned until Monday morning, July 10, 1882.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

MONDAY, July 10, 1882.

The Board met pursuant to adjournment. All members present.

The valuation of a number of railroads was considered.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

TUESDAY, July 11, 1882.

The Board met pursuant to adjournment.

The following members were present: Albert G. Porter, Thomas Hanna, E. H. Wolfe, and R. S. Hill.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

WEDNESDAY, July 12, 1882.

The Board met pursuant to adjournment.

The following members were present: Albert G. Porter, Thomas Hanna, E. H. Wolfe, R. S. Hill and Daniel P. Baldwin.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

THURSDAY, July 13, 1882.

The Board met pursuant to adjournment.

The following members were present: Albert G. Porter, Thomas Hanna, E. H. Wolfe, R. S. Hill and D. P. Baldwin.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

FRIDAY, July 14, 1882.

The Board met pursuant to adjournment.

The following members were present: Albert G. Porter, Thomas Hanna, E. H. Wolfe and R. S. Hill.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until to-morrow morning at 9 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

SATURDAY, July 15, 1882.

The Board met pursuant to adjournment.

The following members were present: Albert G. Porter, Thomas Hanna, E. H. Wolfe and R. S. Hill.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until Monday morning, July 17, 1882.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

MONDAY, July 17, 1882.

The Board met pursuant to adjournment.

The following members were present: Albert G. Porter, Thomas Hanna, E. H. Wolfe and R. S. Hill.

The valuation of railroads was resumed, among them the Wabash, St. Louis & Pacific Railway, and upon motion it was ordered that the main track of this road be reduced from \$13,500 to \$13,000 per mile.

Those voting in the affirmative were: Thomas Hanna, E. H. Wolfe, and R. S. Hill. Negative: A. G. Porter.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

TUESDAY, July 18, 1882.

The Board met pursuant to adjournment.

The following members being present: Albert G. Porter, Thomas Hanna, E. R. Hawn, E. H. Wolfe and R. S. Hill.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

WEDNESDAY, July 19, 1882.

The Board met pursuant to adjournment.

The following members being present: Albert G. Porter, Thomas Hanna, E. R. Hawn, E. H. Wolfe and R. S. Hill.

The valuation of railroads was resumed and continued during the entire day.

And thereupon the Board adjourned until to-morrow morning at 10 o'clock.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

THURSDAY, July 20, 1882.

The Board met pursuant to adjournment. All members being present.

The valuation of railroads was resumed, and the following valuation per mile of the various roads within this State, and the improvements on the right of way and in daily use by such railroads, was unanimously agreed upon, and the same was ordered to be spread upon record, and to stand as the assessment of the railroad property denominated Railroad Track, Rolling Stock, and Improvements on Right of Way, for the year 1882, which assessment is in the words and figures following, to-wit:

TABLE NO. 1.

Value per mile of Main Track, Second Main and Side Track, Rolling Stock and Improvements on Right of Way and in daily use for Railroad Purposes, as fixed by the State Board of Equalization for the Purposes of Taxation for the Year 1882.

RECAPITULATION.

	Miles.	Value.
Main track	4,898.44	\$35,099,126
second main track	45.84	272,600
Side track	802.09	2,256,713
Rolling stock	4,777.06	9,183,178
Improvements on right of way		1,073,781
Total valuation for 1882		\$47,885,398

*On the Richmond & Miami Railroad, the tax on 2.21 miles of main and .94 miles of side track, is to be paid jointly by the Pittsburg, Cincinnati & St. Louis Railway, and the Cincinnati, Hamilton & Dayton Railway, as joint lessees—one-half to each. Of the remainder, 1.98 miles of main track is paid by the P., C. & St. L., as sole lessee, and 3.77 miles of main track and .31 miles of side track by the C., H. & D., as sole lessee. The rolling stock is to be apportioned as follows: 4.19 miles to the P., C. & St. L., valued at \$2,050 per mile, making \$8,970; total value of rolling stock on said road, apportioned as above, \$17,560. The difference in the total rolling stock mileage of this road from its actual mileage of main track, is explained by the fact that 2.21 miles of its main track is used and operated jointly by the P., C. & St. L. and the C., H. & D. Railroad Companies, each Company paying the tax on the valuation of their rolling stock, as shown by their respective reports. The improvements on the right of way belong to the P., C. & St. L.

And thereupon the Board adjourned until Wednesday, July 26, 10 o'clock A. M.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

WEDNESDAY, July 26, 1882.

The Board met pursuant to adjournment.

Present the following members: Albert G. Porter, Thomas Hanna, E. H. Wolfe, E. R. Hawn and R. S. Hill.

And there being no business to transact the Board adjourned until Friday, July 28, 2 o'clock P. M.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

FRIDAY, July 28, 1882.

The Board met pursuant to adjournment, all members being present.

On motion it was ordered that the Auditor of State be authorized to draw warrants upon the State treasury for expenses of the Board as follows:

To W. F. Browder, two dollars for administering the oaths to the members and Secretary of the Board; to Bowen, Stewart & Co., five dollars for Poor's Manual, and to John W. Coons seven hundred and thirty-seven dollars for services as Secretary of the Board in preparing the report of the proceedings, spreading same upon the State Records and having same published and distributed, and for telegraph dispatches received and sent by the Board.

The business and labor of the Board being completed the Board adjourned.

ALBERT G. PORTER,

President of Board.

Attest: JOHN W. COONS,

Secretary of Board.

Hon. E. H. Wolfe, Auditor of State:

It is hereby certified that the foregoing record, from page 452 to 556, inclusive, is the true, full and complete record of the proceedings of the State Board of Equalization for 1882, organized under the act entitled "An act concerning taxation," approved March 29, 1881, and that the same is a correct statement of the valuation made by said Board for the year 1882.

ALBERT G. PORTER,

Governor of Indiana

And President of the State Board of Equalization.

JOHN W. COONS,

Deputy Auditor of State,

And Secretary of the State Board of Equalization.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, July 28, 1882. }

I, E. H. Wolfe, Auditor of the State of Indiana, hereby certify that the within and foregoing is a true copy of the assessed value of railroad property denominated "Railroad Track," "Rolling Stock" and "Improvements on Right of Way," located, used and operated in the State of Indiana, as fixed and valued by the State Board of Equalization for the year 1882, and as certified to me by the President and Secretary of said Board on the 28th of July, 1882.

[SEAL.]

In witness whereof, I hereunto set my hand
and seal at Indianapolis, this 28th day of
July, A. D. 1882.

E. H. WOLFE,

Auditor of State.

ANNUAL REPORT

OF THE

TREASURER OF STATE

OF THE

STATE OF INDIANA,

FOR THE

FISCAL YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received November 16, 1882, examined by the Governor, and transmitted to the Secretary of State to be filed and preserved in his office, and published, as prescribed by law, under the direction of the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

Filed in my office November 20, 1882,

E. R. HAWN,
Secretary of State.

REPORT.

TREASURER OF STATE'S OFFICE,
INDIANAPOLIS, INDIANA, November 16, 1882. }

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

In fulfillment of my duty as Treasurer of State, I have the honor to submit herewith a report of the transactions of this office during the fiscal year which ended October 31, 1882.

The net receipts from all sources during the year, and including \$740,650.72, balance on hand November 1, 1881, were \$3,-808,494.22.

The net disbursements during the year for all purposes were \$3,110,424.70, leaving a balance in the Treasury October 31, 1882, of \$698,069.52.

The total receipts of the General Fund, including \$278,228.22 balance on hand November 1, 1881, were \$1,538,629.86. The disbursements from this fund were \$1,436,900.65, leaving a balance on hand of \$101,729.21. The large accounts of this fund were the expenses of the Penal and Benevolent Institutions \$574,177.05; the State Judiciary, \$150,066.72; the payment of interest on the State Debt, \$280,866.24; and the transfers to the New State House Fund, amounting to \$200,000.00.

The balance remaining to the credit of the New State House Fund October 31, 1882, was \$423,236.84, or \$150,771.54 greater than at the beginning of the year. The balances in the other funds were nearly the same at the end as at the beginning of the year.

The Coghlan Bonds, interest on which was stopped August 1, 1881, by proffer of payment by the State, remain unpaid, the owner of the bonds refusing to accept payment as offered.

For a full detail of the operations of this office, I respectfully call your attention to the accompanying exhibits and tables arranged in the following order:

First. Showing the condition of the various funds of the Treasury at the beginning of the year.

Second. Showing the gross and net receipts and disbursements during the year.

Third. Showing the receipts and disbursements of the various Treasury funds.

Fourth. Showing the gross receipts and disbursements for each month of the year.

Fifth. Showing the condition of the various funds of the Treasury at the close of the year.

Sixth. Showing the condition of the Foreign and Domestic debt of the State October 31, 1882.

Seventh. Tabular statement showing the condition of the General Appropriation accounts.

Eighth. Tabular statement showing the amounts paid in by the County Treasurers at the December settlements, 1881.

Ninth. Tabular statement showing the amounts paid in by the County Treasurers at the May settlements, 1882.

Tenth. Tabular comparative statements, showing amounts collected from the several counties for the cost of maintaining offenders in the House of Refuge and Female Reformatory, and for clothing furnished pupils and patients in the benevolent institutions.

R. S. HILL,

Treasurer of State.

STATEMENT VI.

Showing the Condition of the Foreign and Domestic Debt of the State October 31, 1882.

FOREIGN DEBT.

Five per cent. Stock outstanding.....	\$14,469 99
Two and one-half per cent. Stocks outstanding.....	2,355 13
Five per cent. Bonds held by and pay- able to the Brooklyn Savings Bank of Brooklyn, N. Y., due December 1, 1889, but payable at the pleasure of the State after April 1, 1884.....	200,000 00
Five per cent. Bonds payable on the same conditions through Winslow, Lanier & Co. of New York City...	385,000 00
Five per cent. non-negotiable Bonds, held by Purdue University, due April 1, 1901.....	340,000 00
*Twenty-four Internal Improvement Bonds, past due.....	24,000 00
Six five per cent. Internal Improve- ment Bonds, due July 1, 1886, held by the United States.....	6,000 00
Total.....	<u>\$971,825 12</u>

DOMESTIC DEBT.

Six per cent. non-negotiable Bonds, due the Com- mon School Fund, interest payable semi-annu- ally April 10 and October 10, to the School Rev- enue for Tuition Fund.....	3,904,783 22
Total debt of the State.....	<u><u>\$4,876,608 34</u></u>

* NOTE.—These Bonds are familiarly known as the Henry Coghlan bonds. No interest has been paid on them since 1841. The State officers proposed to pay six per cent. on the principal and six per cent. on the coupons after they became due until February 13, 1873. This was refused, the holder of the bonds claiming interest at the rate of seven per cent. on both principal and coupons from the time they came due until they are paid. Suit was brought in the Superior Court of Marion County and the owner's claim of seven per cent. allowed by that court. From this decision an appeal was taken to the Supreme Court and the decision of the lower court affirmed. Bond No. 283, upon which the suit was brought was presented for payment and paid, June 6, 1881.

The holder of the bonds demanded payment of twenty-three of the remaining bonds and at a meeting of the Financial Board it was decided to pay them. Formal tender of payment was made by the Treasurer of State August 1, 1881, in the terms of the decision of the Supreme Court in the case of bond No. 283, and all interest from that date was stopped. The holder as yet refuses to accept payment and further demands interest on the total amount due at the date of his former demand, and has brought suit to that end. The case is now pending in the General Term of the Superior Court of Marion County, Indiana.

STATEMENT VII.

CONDITION OF THE VARIOUS APPROPRIATION ACCOUNTS.

TABULAR STATEMENT showing the Condition of the various Appropriation Accounts at the close of the Fiscal Year, October 31, 1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 16, 1882, examined by the Governor, referred to the Auditor of State for verification of the financial statement, (*q. r.*) and delivered to the Secretary of State to be filed in his office, and printed as may be ordered by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 20, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, do hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in my office December 20, 1882.

E. R. HAWN,
Secretary of State.

INDIANA UNIVERSITY, }
BLOOMINGTON, IND., December 9, 1882. }

To His Excellency, ALBERT G. PORTER,
Governor of the State of Indiana:

SIR:—I have the honor to transmit herewith, in accordance with law, the annual report of the Trustees of Indiana University for the fiscal year ending October 31, 1882, showing the receipts and expenditures for said year; also the report of the Committee on Finance, giving estimates for the year ending October 31, 1883.

Very respectfully, your obedient servant,

D. D. BANTA,
President of the Board of Trustees of Indiana University.

REPORT FOR THE FISCAL YEAR 1881-82.

RECEIPTS.

FINANCE COMMITTEE REPORT.

To the President and Board of Trustees of Indiana University:

Your Committee on Finance beg leave to report that they have carefully examined the accounts, warrants, vouchers, etc., of the Secretary and Treasurer of the Board, and found them correct. It is found by your Committee, that the revenue for the year ending October 31, 1882, from all sources, amounted to the sum of \$34,942.97, and that the total expenditures for said year, including the deficiency for the last quarter of the preceding year, amounted to the sum of \$37,362.13; thus leaving the sum of \$2,419.16 unprovided for, and payable on the 31st day of October, 1882.

The estimated revenue for the fiscal year ending October 31, 1883, is \$34,000.

To meet the deficit of last year and for the expenses of the fiscal year commencing on the 1st of November, 1882, your Committee recommend the adoption of the following resolution:

Resolved, That there be appropriated from the General Fund, the following sums:

Deficiency of last year, already paid	\$2,419 16
Salaries of the Faculty	24,750 00
Salaries of Officers	1,600 00
Pay of Trustees	1,800 00
For Contingent Fund	1,400 00
For buildings and grounds	200 00
For Library Fund	200 00
For Equatorial telescope (ordered).	520 00
For Department of Physics	100 00
For Department of Chemistry	350 00
For Department of English Literature (maps).	10 00
For Department of Natural Science (microscope)	100 00

Total for all purposes	\$33,449 16

THE

EIGHTH ANNUAL REPORT

OF

PURDUE UNIVERSITY,

FOR THE

COLLEGE YEAR ENDING JUNE 30, 1882;

WITH THE

TREASURER'S REPORT FOR THE FISCAL YEAR ENDING
OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1883.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 16, 1882, examined by the Governor, referred to the Auditor of State for verification of the financial statement, and delivered to the Secretary of State, to be filed and preserved in his office and published as may be ordered by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE.

Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 20, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, do hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,

Auditor of State.

Filed in my office, December 20, 1882.

E. R. HAWN,

Secretary of State.

BOARD OF TRUSTEES.

JOSEPH C. RATLIFF, Richmond.

JOHN S. WILLIAMS, Lafayette.

WILLIAM H. RAGAN, Clayton.

JACOB MUTZ, Edinburg.

CHARLES R. PEDDLE, Terre Haute.

ALFRED P. EDGERTON, Fort Wayne.

OFFICERS OF THE BOARD.

JOSEPH C. RATLIFF, President.

JOHN A. STEIN, Secretary.

MARTIN L. PEIRCE, Treasurer.

REPORT OF BOARD OF TRUSTEES.

PURDUE UNIVERSITY, December 14, 1882.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

SIR—The Trustees of Purdue University have the honor to submit the report of the institution for the college year ending June 30, 1882, with the report of the Treasurer for the fiscal year ending October 31, 1882.

The fourth section of the act of Congress, which is incorporated into and made a part of the law of the State organizing Purdue University, provides:

“An annual report shall be made regarding the progress of each college, recording any improvements and experiments made, with their costs and results, and such other matters, including State industrial and economical statistics, as may be supposed to be useful; one copy of which shall be transmitted by mail, free, by each to all other colleges which may be endowed under the provisions of this act, and, also, one copy to the Secretary of the Interior.”

In accordance with this provision, the Trustees have submitted to the Governor a report each year since the opening of the University, and these several reports have been published by the State; but the number of copies furnished the institution for distribution is not sufficient to meet the demand, and the Trustees have been obliged, for several years past, to make provision for printing an extra edition. There is an increasing demand for these reports, and it is earnestly hoped that the State may hereafter print a sufficiently large edition to supply the University with at least one thousand copies.

The present report is one of special value. The report of the President of the University, with the accompanying reports of the several departments, gives unusually full information respecting the progress, condition, and needs of the institution.

The exhibit made of the practical work of the University in science and industry, is very satisfactory to the Trustees, and it is believed that it will also be satisfactory to all friends of industrial education. It shows that the institution is held conscientiously to the work for which it was endowed.

Purdue University has never been in so hopeful and satisfactory condition as it is at the present time. Not only has there been a decided advance in the character of the work done in the past two years, but the appliances and accommodations of several of the departments have been greatly improved. The greatest change has been made in the Department of Agriculture and Horticulture. Nearly one-third of the State appropriation of 1881 was expended for its better equipment for practical and successful work.

It has been explained in previous reports that the financial statement of the Treasurer is for the *fiscal* year ending October 31, and hence does not give the receipts and expenditures for the *college* year. This information is given in the President's report, the summary being made out from the books kept by the Registrar at the University.

Special attention is called to the statement of the purposes for which the State appropriation of \$20,000 of 1881 was expended, and also to the fact that most of the appropriation of 1882 will be needed to pay the running expenses of the institution to November 1, 1883, leaving only some \$6,000 for improvements of all kinds.

As indicated in the report of last year, the only resources of the institution now available are (1), the interest on the endowment fund, \$17,000 a year; (2), current receipts from students, fees charged for rooms, etc., amounting to \$3,000 to \$4,000 a year; and (3), appropriations by the State, which must be liberal if the institution does the work expected of it. The estimates for the next two years, unanimously approved by the Trustees, show that it will require an appropriation of \$25,000 a year, and this should be a *continuous* appropriation. The Trustees feel that it can not be necessary to urge the appropriation asked for to erect a suitable building for mechanics' shops and other mechanical purposes. The present accommodations for this important department are inadequate, and they should be increased.

I desire to call special attention to the table compiled by President White, to show the cost-value of the property belonging to Purdue University, including lands and buildings, steam, gas, and water fixtures, apparatus, museum, cabinets, books, etc. The aggregate is over \$300,000—a magnificent investment. More than \$230,000 of this investment was paid for from bequests. If to these the endowment of \$340,000, derived from the land-scrip, be added, the total bequest to the State is \$570,000.

The present plan of managing the farm by the Professor of Agriculture, under the supervision of a committee of the Board, has worked well so far, and it promises good results. The Horticultural Department has never been in such good condition. Both green-houses are filled with choice plants that will be in fine condition for sale next season. The number sold to visitors last year amounted to nearly enough to pay the expenses connected with this department. The improvements on the campus have added greatly to its beauty. The suggestion that from one to six evergreens from the nursery, that will be too large for transplanting after next spring, be donated to the farmers in the vicinity of the University, who will plant them about their homes, meets the hearty approval of the Board.

It is a most gratifying fact that the ninth year of the University finds such full agreement and harmony of action among those entrusted with its management and control. Confidence in the complete success of the institution increases from year to year.

In behalf of the Board of Trustees,

JOSEPH C. RATLIFF,

President of the Board.

JOHN A. STEIN,

Secretary.

TREASURER'S REPORT.

The Treasurer reports the condition of the United States Endowment fund for the fiscal year ending October 31, 1882, as follows:

RECEIPTS.

Balance in treasury November 1, 1881.	\$1,945 31
From interest on loan to State of Indiana	\$17,000 00.
Collected from students (not from U. S. Endowment).....	1,539 40
	<hr/>
	18,539 40
Total.....	<hr/>
	\$20,484 71

PAYMENTS.

To President, Professors, Instructors, etc	\$19,336 76
Cash balance in treasury	1,147 95
	<hr/>
Total.....	<hr/>
	\$20,484 71

Also in treasury loan warrant to State of Indiana for \$340,000.

The Treasurer also reports receipts and disbursements of the General Expense and Improvement fund, as follows:

CURRENT RECEIPTS OF THE UNIVERSITY.

From rents of students and others	\$828 50	
From trees and plants sold	395 04	
From charges for chemicals and gas	227 00	
From breakages in laboratory.....	172 87	
From keeping horses, etc.....	110 00	
From experimental products sold.....	15 15	
From coal and gas sold.....	177 92	
From miscellaneous receipts	107 50	
<hr/>		
Total		\$2,033 98

CURRENT RECEIPTS OF FARM.

From farm products and pasturage	\$717 00	
From stock sold	261 00	
From hauling coal and other work.....	524 90	
<hr/>		
Total		\$1,502 90

STATE APPROPRIATION.

Appropriation for year ending November 1, 1882.....	\$20,000 00
--	-------------

EXPENDITURES.

Sundry warrants paid (as per report).....	\$24,925 17
---	-------------

Respectfully submitted,

M. L. PEIRCE,
Treasurer Purdue University.

PRESIDENT'S REPORT.

To the Board of Trustees of Purdue University:

GENTLEMEN—I have the honor to submit the report of Purdue University, for the college year ending June 30, 1882, the same being the eighth annual report of the institution.

The year was marked by needed improvements in the appliances and accommodations for instruction and practice in several of the departments, especially in the departments of Agriculture and Horticulture, Mechanics, Chemistry, Natural History, and Industrial Art, with a corresponding progress in the character of the work. The several courses of study were also carefully revised and the instruction improved in practical value—results made possible by a larger experience.

There was also a gratifying change for the better in the industrial spirit of the institution. This was made manifest to the public at Commencement by the orations, which, with perhaps one exception, were devoted to the discussion of practical industrial topics, and also to the fact that four of the young men who graduated, had completed the Agricultural course—three the regular course and one the special course—and have the honor of being the first agricultural graduates enrolled among the alumni of the University.

But the year was specially characterized by an increasing harmony and good feeling among the students, with a more earnest application to study and a consequent higher attainment and standing, and this change is even more marked the present year. The small but annoying source of discord which once existed, has disappeared, and the students are united and harmonious. An admirable spirit pervades the entire institution.

These gratifying and auspicious changes for the better are the natural results of the happy issue of the conflict through which the University has recently passed. The last annual report (1880-81) contains a full history of this conflict (known as the "Greek Fraternity Issue"), including the history of the Purdue regulation, the special reasons for its enactment, the decision of Judge Vinton, declaring the regulation reasonable and valid, and a mass of testimony bearing on the wisdom and expediency of such a regulation—this testimony consisting chiefly of the opinions of college men and the action of college authorities.

The case was subsequently taken by appeal to the Supreme Court, and it will suffice to add, in this report, that, while the Supreme Court reversed the judgment of the lower court and overruled the Faculty's petition for rehearing, it decided the *real* issue involved (the only question raised, argued, and decided in the lower court) in favor of the University. The portion of the amended opinion which affirms the authority of the Trustees to exclude the Greek fraternities from the University, and prohibit the connection of students therewith, is as follows:

"It is clearly within the power of the Trustees, and of the Faculty, when acting presumably or otherwise in their behalf, to absolutely prohibit any connection between the Greek fraternities and the University. The Trustees have also the undoubted authority to prohibit the attendance of students upon meetings of such Greek fraternities or from having any other active connection with such organizations, so long as such students remain under the control of the University, whenever such attendance upon the meetings of, or other active connection with, such fraternities tends in any material degree to interfere with the proper relations of the students to the University. As to the propriety of such and similar inhibitions and restrictions, the Trustees, aided by the experience of the Faculty, ought and are presumed to be the better judges, and as to all such matters, within reasonable limits, the power of the Trustees is plenary and complete."

"Roberts *vs.* City of Boston, 5 Cush., 198.

"Spiller *vs.* the Inhabitants, etc., 12 Allen, 127.

"Hodgkins *vs.* the Inhabitants, etc., 105 Mass., 475.

"Ferriter *vs.* Tyler, 48 Vermont, 444.

"State *vs.* Burton, 45 Wis., 150.

"Spear *vs.* Cummings, 23 Pick., 225.

"Donahue *vs.* Richards, 38 Maine, 379.

"Dallas *vs.* Fosdick, 40 Howard P. K., 249.

"Dritt *vs.* Snodgrass, 66 Mo., 286."

It is not easy to see how this utterance of the Court on the question of authority, the only real question involved, could be

made more explicit or decisive, and especially when read in the light of the supporting authorities cited. It is entirely satisfactory to the officers of the University, and is accepted as conclusive by patrons and students, and, so far as we know, by all parties interested. Since its publication there has been a most cheerful acquiescence in the regulations and authority of the University, and it is hoped that the institution may now have the opportunity to work out the difficult problem of higher industrial education without outside interference, and without any further challenging of its authority.

The great unanimity and harmony existing in and between the Board of Trustees, the Faculty, and the students, promise increasing prosperity in the future. In these important internal conditions of growth and success, Purdue University challenges comparison with any other college in the State.

STUDENTS.

The whole number of different students in attendance the past year was 238, classified as follows:

College.

Post Graduates.....	3	
Seniors	11	
Juniors.....	20	
Sophomores.....	18	
Freshmen.....	47	
	—	99

Special Schools.

Agriculture	17	
Mechanics.....	20	
Industrial Art.....	16	
Chemistry.....	6	
Natural History	2	
	—	61

Academy.

Second year.....	48
First year.....	38
Irregular.....	43
	<hr/> — 129
Total.....	289
Students twice entered (deducted).....	51
	<hr/>
Total number of different students.....	238

A comparison of these figures with those of the preceding year shows an increase of students in the College, and a slight decrease in the Academy. A comparison of the attendance in 1881–82 with the attendance in 1879–80 (two years before), shows a marked increase in both departments. The average increase in the number of students in the College in the past five years is over $12\frac{1}{2}$ per cent a year.

The slight falling off in the number of students in the Academy the past year is due to the raising of the standard of admission full one-half a year, and the requiring of all applicants to pass an entrance examination. It was expected that these changes in the conditions of admission would cause a temporary decrease in the number of students, and especially in the first-year class, but it was believed that these changes would improve the character of the work done in the Academy and be a gain to the University. The Academy is not designed to take the place of the common country school, but to fill the gap between the average country school and the college. The elementary instruction excluded by the raising of the standard half a year, is already provided for in the country school, and its omission from the Academy course permits more attention to be given to the higher common-school branches and other preparatory studies. Young people who have improved their opportunities in the common school, find no difficulty in passing the entrance examinations, and many of these applicants enter the second-year course, and a less, but considerable, number pass creditably the examinations for admission to the Freshman class.

The whole number of graduates from the regular college courses is 33, the number graduating from the Scientific course

being 30, and from the Agricultural course 3, all receiving the degree of Bachelor of Science (B. S.). The number of graduates in 1875 (first year of the University), was 1; in 1876, 1; in 1877, 2; in 1878, 4; in 1879, 2; in 1880, 7; in 1881, 8; in 1882, 8. The number of students in the present Senior class is 16. The number of students who have completed special courses and received a degree, is 6; five the degree of Analytical Chemist (A. C.), and one the degree of Civil Engineer (C. E.). Three students have completed the special course in Agriculture, and received a diploma.

To those who are not familiar with the growth of colleges, it may seem strange that there were so few graduates the first five years. It should be remembered that few students leave established institutions to enter a new institution. Nearly all the students who first entered Purdue, were in the preparatory classes, and it consequently took three to four years to create a Senior class. At the close of the second year of the University there were only fifteen students in the four college classes. It should also be remembered that the great majority of the students who enter a new institution, have no intention of completing the course and graduating. In the older colleges nearly all students enter with this intention. It takes time to reach this favorable condition, and the present Senior class shows that Purdue has made commendable progress in this direction. When this class was organized in 1879 it contained 36 students. The next year (Sophomore) the class enrolled 29 students; the next year, 20; and the present number is 16. Few of the classes in the older colleges in the West have a higher record in this particular. This result is very encouraging, since Purdue University represents a new departure in higher education, and it necessarily takes time to show its character and practical value.

COUNTIES REPRESENTED.

When the University first opened nearly all the students were from the vicinity, as is true of all new institutions of like grade, but the attendance from other sections of the State has steadily increased until nearly every county has been represented by one or more students. The names of the counties represented last year, are as follows:

Bartholomew,	Henry (5),	Rush,
Benton (17),	Howard,	Scott,
Blackford,	Jackson,	Shelby,
Boone,	Jasper,	Spencer,
Carroll,	Jay,	Steuben,
Cass,	Jefferson,	Switzerland,
Clarke,	Johnson,	Tippecanoe,
Clay,	Knox,	Tipton,
Clinton,	Marion (13),	Union,
Delaware,	Miami,	Vigo,
Fountain,	Montgomery,	Wabash,
Fulton,	Morgan	Warren,
Grant,	Orange,	Wayne,
Hancock,	Posey,	White,
Hamilton,	Putnam,	Whitley.
Hendricks,	Ripley.	Total, 47.

APPOINTED STUDENTS.

A law passed March 12, 1877, gives the Board of Commissioners of each county of the State the authority to appoint two students to Purdue University, and the students thus appointed are exempt from the payment of entrance and incidental fees, and the regular charges for room, heat, and light. The reduction in a student's expenses, thus provided for, amounts to \$33 a year, or about one-fifth of all necessary expenses. The Attorney General has decided that the students thus appointed must be residents of the county in which the appointment is made.

The number of appointed students in attendance the past year was 68, and, for several years past, about three-fourths of the young men occupying rooms in the dormitory have been appointed students. Most of the counties of the State have been thus represented, and a number of counties keep two representatives constantly in the institution.

It is believed that this law was at first a benefit to the University. It secured a wider, if not a larger, attendance, and thus made the special character of the institution more widely known. It has also brought, as a rule, a superior class of students to the institution, young men worthy of the assistance thus received.

But it is a question whether these advantages are not now somewhat offset by unfavorable results. Those who seem to be in a position to know, assure us that the law operates against the attendance of students from their respective counties. Young people look upon an appointment as the special inducement for attending Purdue, and being unsuccessful in their application (as all but two must be), they attend school elsewhere, or postpone attendance at Purdue, with the hope of receiving the appointment the next year, or when a vacancy occurs. This view is somewhat strengthened by the fact that in several known instances applicants, who had passed their entrance examinations, have postponed entering the University because of their failure to secure an appointment. We have no means of determining the extent to which the law thus unfavorably affects the attendance of students, but it certainly imposes a considerable tax on the limited resources of the University, the fees and charges remitted amounting to \$1,500 to \$1,800 a year. The assistance thus provided should, if possible, be so conferred as to obviate the difficulty above referred to, and, at the same time, more fully secure the object for which the law was enacted. I recommend that the law be so amended as to make its provisions applicable only to students who are pursuing either the Agricultural course or the Mechanical course. This will secure representatives from all sections of the State, and, at the same time, it will be an inducement to young men to pursue these excellent industrial courses, and thus will strengthen the institution in the special work for which it was founded. It may be wise to make the provisions of the law applicable only to *Agricultural* students. Such a change would greatly strengthen this department.

COUNTY ENTRANCE EXAMINATIONS.

In the last annual report attention was called to the fact that arrangements had been made for holding entrance examinations in the several counties, under the direction of County Superintendents. On the receipt of one or more applications from any county, printed or written questions are sent, with directions, to the County Superintendent for use at the first subsequent county examination of teachers, at which time the applicant or applicants are expected to present themselves for

examination. The written answers are forwarded to the University, where they are read and marked, and a certificate of admission forwarded to each applicant who passes the examination. The first county examination under this plan was held the last Saturday in July, 1881, at which twenty-one applicants were examined, and examinations have since been held at different times, in a score or more counties. Applicants can be examined at any county examination of teachers, by making application to the President of the University, at least twenty days prior to such examination. County Superintendents have generally expressed a willingness to render this service, and it is hoped that the plan may be increasingly successful. It enables applicants to pass the entrance examinations before leaving home, and thus removes all uncertainty respecting their admission.

APPLICANTS FROM HIGH SCHOOLS.

For several years past the State Board of Education has issued commissions to approved High Schools, authorizing them to prepare students for the Indiana University; and the graduates of these commissioned schools are also admitted to Purdue University without examination. The object is to put admission to the two State Universities within easy reach of as many well-prepared applicants as possible, and, at the same time, to acknowledge the excellence of these schools and their close relation to the university system of the State.

The following High Schools have been thus commissioned by the State Board of Education:

Attica,	Greenfield,	Peru,
Bloomington,	Greensburg,	Rockville,
Cambridge City,	Indianapolis,	Sullivan,
Carthage,	Knightstown,	Terre Haute,
Columbus,	Kokomo,	Union City,
Connersville,	Lawrenceburg,	Valparaiso,
Covington,	Logansport,	Vevay,
Edinburg,	Madison,	Vincennes,
Evansville,	Martinsville,	Washington,
Frankfort,	Mitchell,	Winchester,
Franklin,	Muncie,	Worthington.
Goshen,		

FACULTY.

The death of Prof. R. F. H. Weyher, A. M., in charge of the German department, occurred December 20, 1881, after an illness of several months. Professor Weyher had been connected with the University five years—three years as instructor and the last two as professor. He was an earnest and faithful teacher, and strenuously aimed to impart to his students the ability, not only to read German, but also to speak and write the language. The results did not fully meet his expectations, but the instructor was not disheartened. During Professor Weyher's illness and after his death the classes in German were taught by temporary instructors: Professor Bernhardt Tietz, of Terre Haute, for four months, and Rev. Alfred Kummer, of Lafayette, for about the same length of time.

As a temporary expedient, the instruction in German the present year has been divided between and added to the duties of two members of the Faculty—Professors Wiley and Peck. Professor Wiley is teaching two classes in German in addition to his duties as Professor of Chemistry (his work as State Chemist being largely done by an assistant), and Miss Peck is teaching one German class in addition to her duties as instructor in Latin and Elocution. This loads each with extra and temporary work, and whatever may be the progress made in German, the arrangement should not be continued longer than the present year. An able instructor, one who makes the teaching of modern languages a specialty, should be put in charge of the department, and nothing less than the ability to read, write, and speak German fluently should be accepted as a satisfactory result of daily instruction in German for three years. Every chair in Purdue should be filled by a scholar eminent, or with undoubted promise of eminence, in his special department, and, what is equally important, by a skillful and successful instructor.

Soon after Commencement, Prof. Charles L. Ingersoll, M. S., resigned the chair of Agriculture and Horticulture to accept the presidency of the State Agricultural College of Colorado, Fort Collins. He had been in charge of the department of Agriculture but three years, and, in this brief time, had organized it and made most gratifying progress both in instruction and experiment. A few months prior to his resignation he

consented to take the supervision of the farm in addition to his other duties, and soon had all this work well in hand. His leaving would have been an irreparable loss to the institution if the Board had not been fortunate in the choice of a successor. The department is now in charge of Prof. Wm. C. Latta, who is believed to be well qualified to carry on the work so well begun to satisfactory success. He is a graduate of the State Agricultural College of Michigan, and, for several years after graduation, gave special attention to the care of stock, drainage, experiments in Agriculture, and other duties which he has here assumed. He will continue the general plan and system inaugurated by Professor Ingersoll, thus avoiding the loss which usually results from a change of officers.

In the last report, attention was called to the arrangement by which the services of Lieut. W. R. Hamilton, U. S. A., as instructor in Military Tactics, were secured for the past year. The arrangement is continued, with the further advantage that he takes charge of the school of Engineering, reopened in September last. He divides his time equally between Asbury University and Purdue University. The present Faculty is constituted as follows:

EMERSON E. WHITE, President, and Professor of Political and Intellectual Science.

HARVEY W. WILEY, Professor of Chemistry and Physics.

DAVID G. HERRON, Professor of Mathematics.

LANGDON S. THOMPSON, Professor of Industrial Art.

JOHN A. MAXWELL, Professor of English and History.

CHARLES R. BARNES, Professor of Botany, Zoology, and Geology.

WILLIAM F. M. GOSS, Instructor in Mechanics and Foreman of the Mechanics' Shop.

WILLIAM C. LATTI, Instructor in Agriculture and Horticulture, and Farm Superintendent.

ANNIE S. PECK, Instructor in Latin and Elocution.

EDWARD E. SMITH, Principal of the University Academy.

EDNA D. BAKER, Associate Instructor in the Academy and Matron of the Ladies' Hall.

LIEUT. W. R. HAMILTON, U. S. A., Instructor in Military Tactics and Engineering.

MOSES C. STEVENS, Registrar and Librarian.

Mr. Walter H. Peters, class of 1882, succeeds Mr. G. L. Spencer (now in Europe) as Assistant Chemist; Miss Jessie F. Thompson, class of 1881, is Assistant in Industrial Art; and Emory C. White, of the Senior class, is teacher of Book-keeping in the Academy. These assistants are each employed only a part of the time.

The plan of employing assistants in the several departments where help is needed, is more economical than the division of the departments and the creation of new chairs; but assistant-instructors, or tutors, lower the character of college instruction, and they should be employed only when the resources of a college are not sufficient to employ permanent and well-qualified professors. But in a laboratory of any kind there is always much work which can be efficiently, as well as economically done by assistants, who may also be pursuing special studies. This is now true, not only of the departments of Chemistry and Industrial Art, but also of Natural History, Agriculture, and Mechanics. Something more than assistance in laboratory work will soon be needed in several of these departments. The amount of work in Natural History and Agriculture and Horticulture will soon exceed the ability of the professors in charge of these departments, and additional chairs must be established. It is impossible, for example, for one professor to teach four or five natural history sciences, provide for and oversee the laboratory work of students in each science, and also act as curator of a growing museum and cabinet. It is also impossible for one professor to teach daily three classes in Agriculture and one in Horticulture, and, at the same time, conduct an experimental station and superintend a model farm.

The first change required will be the transfer of Horticulture to the department of Natural History, and the division of this department, thus enlarged, into two departments. This change should be made at an early day, and other chairs must be added in the near future, if the institution is to continue to do creditable work; and this, too, without adopting prematurely the university plan of assigning at least one professor to each important branch or subdivision of science. We recognize the fact that the College proper stands between the High School and the University, and that its methods of instruction are consequently less elementary than the former,

and less advanced than the latter. In college training the two elements of testing and drill are much more prominent than in university instruction, where the formal lecture has so large a place, and hence it is not unreasonable to require a college instructor in science to teach at least two classes daily, and personally direct the attending laboratory practice.

But the organization of special schools, with post-graduate courses, has introduced the university element into Purdue, in connection with and in addition to its regular college work. So far, the only special students of this grade have been in Chemistry, Engineering, Botany, and Industrial Art. The other special courses so far taken have been within the regular courses, and have required but little extra attention and time. How far it may be wise to develop the university element here, is a question not yet fully settled. Much will depend upon the resources of the institution.

OBJECTS AND AIMS OF THE UNIVERSITY.

Purdue University is one of the industrial colleges which were partially endowed by an act of Congress, donating lands to the several States "for the benefit of agriculture and the mechanic arts." The fourth section of the Act concludes as follows :

"The interest of which shall be inviolably appropriated by each State, which may take and claim the benefit of this Act, to the endowment, support, and maintenance, of at least one college where the leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

It is plain from these provisions, that it was not the design of Congress to found new colleges of the ordinary classical type, or to make a donation for the benefit of existing classical institutions. The one imperative condition on which each State accepted the grant, is that the funds derived therefrom are to be used for the support and maintenance of at least one college, "*where the leading object shall be * * * to teach such branches of learning as are related to agriculture and the mechanic arts.*" The act, it is true, does not exclude other scientific and

classical studies, and so many of these may be taught as auxiliary studies as may be deemed best to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life. But the one central purpose of the grant was to found colleges of science and industry for the benefit of agriculture and the mechanic arts. All the professions had their schools for special training, and business colleges had been established in all the centers of trade. The new National Industrial College was founded to afford scientific and technical training for the farmer and the artisan, and to promote the leading industrial interests of the country by scientific experiment and discovery.

The manner in which these great purposes should be accomplished, was left by Congress to the legislatures of the several States, and these have usually determined the general plan of organization, but have entrusted all details to Boards of Trustees appointed to give shape and direction to the institutions thus founded. The State of Indiana accepted the grant by an act approved March 6, 1865, therein assented to "all the conditions and provisions" of the act of Congress, and designated and appointed trustees to receive the land scrip, under the corporate name of the "Trustees of the Indiana Agricultural College." An act of the General Assembly, approved May 6, 1869, accepted the donation of \$150,000 by John Purdue, located the Indiana Agricultural College in Tippecanoe county, and changed its name to Purdue University. There is not a provision in either of these organic acts of the General Assembly that defines the character of the institution thus established. This is left precisely as determined and defined by the provisions of the act of Congress above cited; and, in conformity to these provisions, Purdue University has been organized and managed. It is claimed, and fully believed, that the institution conforms more literally and fully to the terms of the congressional grant, than any other land-grant college in the country. It is, in reality, *a college of science and industry*, science being made the basis of its industrial training. Its central, controlling aim is to prepare men to lead in the applications of science to agriculture and the mechanic arts; to send forth well trained scientists, agriculturists, and artisans to promote the great industrial interests of the State.

COURSES OF STUDY.

The University, as reorganized in 1876, embraces three general departments, designated as the College of General Science; Special Schools of Science and Industry; and the University Academy. The college provides four regular courses of study, viz.: the Scientific course, the Agricultural course, the Mechanical course, and the Industrial Art course. The aim and scope of these several courses are indicated below:

1.—*Scientific Course.*

The aim of the Scientific course is to give a thorough scientific education as a general preparation for all industrial pursuits, and, secondly, as an adequate preparation for special courses of study. The natural and physical sciences are the *leading* branches in the course, requiring about one-third of the student's time for the entire period of four years. It also gives unusual prominence to industrial art.

The regular course is as follows:

FRESHMAN YEAR.—(a) Biology and Botany; (b) Geometry and Algebra; (c) Industrial Drawing; (d) Latin or German or English.

SOPHOMORE.—(a) Zoology and Physics; (b) Higher Algebra, Trigonometry, and Surveying; (c) Ancient, Mediæval, and Modern History; (d) Latin or German.

JUNIOR.—(a) Chemistry; (b) Analytical Geometry and Astronomy; (c) Rhetoric and English Literature; (d) Latin or German.

SENIOR.—(a) Higher Physiology and Geology; (b) Political Economy, U. S. Constitution, and Intellectual Science; (c) Calculus and Logic, or an advanced course in Chemistry, or Botany, or Zoology.

2.—*Agricultural Course.*

The Agricultural course aims not only to give a good scientific education, but also to impart a thorough and practical knowledge of the principles of Agriculture and Horticulture. It gives special attention to scientific experiments.

The regular full course is as follows :

FRESHMAN YEAR.—(a) *Stock, Stock Breeding, Comparative Anatomy, Veterinary Obstetrics, and Veterinary Science*; (b) *Biology and Botany*; (c) *Geometry and Algebra*; (d) *Industrial Drawing*. Due attention is given to English composition.

SOPHOMORE.—(a) *Crops* (methods of tillage, rotation of crops, etc.), *Meteorology, Drainage, and Farm Management*; (b) *Zoology and Physics*; (c) *Higher Algebra, Trigonometry, and Surveying*; (d) *Ancient, Mediæval, and Modern History*.

JUNIOR.—(a) *Pomology, Floriculture, Forestry, Entomology, Landscape Gardening, and Market Gardening*; (b) *Chemistry*; (c) *Analytical Geometry and Astronomy*; (d) *Rhetoric and English Literature*.

SENIOR.—(a) *Agricultural Chemistry and Special Studies and Experiments in Agriculture*; (b) *Higher Physiology and Geology*; (c) *Political Economy, U. S. Constitution, and Intellectual Science*.

The students who take the above course, are required to work two hours daily in the experimental field, campus, nursery, orchard, etc., during the fall and spring terms (receiving pay for satisfactory work), and in the mechanics' shop during the winter term. This manual labor not only imparts increased skill, but it also fosters an active interest in industrial pursuits.

The first two years of the full course, outlined above, constitute a *Short Course in Agriculture*.

The branches of study printed in *italics* in the above course, constitute a *Special Course in Agriculture and Horticulture*. All students who take this special course, are required to pursue the corresponding Natural and Physical Sciences. Students who have a fair knowledge of Botany and Zoology, can complete the first two years of this special course in one year, but the results, so far, have not been satisfactory.

3.—*Mechanical Course.*

The regular Mechanical course is as follows:

FRESHMAN YEAR.—(a) *Shop Practice in Carpentry, Wood-turning, Pattern-making and Vise Work*, with Instruction in

Carpentry, Pattern Construction, Casting and Founding, and Machine Drawing; (b) Geometry and Algebra; (c) Industrial Drawing; (d) English.

SOPHOMORE.—(a) Shop Practice in *Forging and Machine Work*; (b) Instruction in *Machine Drawing, Mill Work, and Machinery*; (c) Higher Algebra, Trigonometry and Surveying; (d) Physics.

JUNIOR.—(a) *Mechanical Engineering*, or German; (b) Chemistry; (c) Analytical Geometry and Astronomy; (d) Rhetoric and English Literature.

SENIOR.—(a) *Mechanical Engineering*, or German; (b) Higher Physiology and Geology; (c) Calculus and Logic; (d) Political Economy, U. S. Constitution, and Intellectual Science.

The first two years of this course furnish an excellent technical training for a mechanic or machinist, and it also affords a good preparation for a course in Mechanical and Civil Engineering. It provides two years of shop-practice (two hours daily) in the use of hand and machine tools for working in wood and iron; one year's instruction (one hour daily) in the elements of Carpentry, Pattern-making, Foundry, Mill Work, etc., and one year's instruction in Mechanical Drawing, thus including the elements of all the common trades; and, at the same time, the course of these two years provides instruction in Mathematics, Physical Science, and English.

This may be followed by two years' instruction in Mechanical Engineering, taken in connection with the branches in the corresponding terms of the Scientific course.

The branches of study and practice printed in *italics* in the first two years of the above course, constitute a *Special Course in Practical Mechanics*, and may be taken by those who have the necessary knowledge of Algebra, Geometry, and Drawing. This course can be taken in one year, but the results are not satisfactory. It is much better for students to take the first two years of the regular course.

4.—*Industrial Art Course.*

Instruction in Industrial Drawing has been provided for from the beginning, and such instruction is made an important element in all the regular courses of study. The more advanced

instruction has been given to special students, or to regular students who have been able to continue Industrial Art as an extra study.

The importance of this training, and the interest of students in it, have resulted in the adding of an Industrial Art course to the regular industrial courses. It is as follows:

FRESHMAN YEAR.—(a) *Industrial Drawing* (1 yr.); *Clay or Wax Modeling* (15 w.) and Wood Carving; (b) Geometry and Algebra; (c) Biology and Botany; (d) English.

SOPHOMORE.—(a) *Industrial Art* (see below) and *Industrial Design*; (b) Higher Algebra, Trigonometry, and Surveying; (c) Zoology and Physics.

JUNIOR.—(a) Chemistry; (b) Analytical Geometry and Astronomy; (c) Rhetoric and English Literature; (d) Latin or German.

SENIOR.—(a) Higher Physiology and Geology; (b) Political Economy, U. S. Constitution and Intellectual Science; (c) Latin or German; (d) *Special Study in Industrial Art*.

The course in Industrial Drawing in the Freshman year includes Geometrical Drawing (about 100 problems), Perspective, Orthographic Projection, Isometric Projection, and Model and Object Drawing.

The course in Clay and Wax Modeling will include the modeling of geometrical solids, followed by architectural ornaments, fruits, flowers, parts of the human body, etc., an excellent preparation for work in wood, iron, glass, plaster, stucco, etc.

The course in Wood Carving will include diaper carving, incised carving, low-relief carving, and higher-relief carving, including tablets, panels, sculptured ornaments, etc.

The course in Industrial Art in the Sophomore year will include drawing in light and shade, light and color, and historical ornament; and the course in Industrial Design will include the analysis of plant-forms for purposes of design, and the making of original designs for prints, carpets, lace, wall paper, oil cloths, tiles, China ware, etc.

Students who do not wish to take the full course, outlined above, can take a special course, made up of branches printed in italics in the above full course, and devote all their time to it.

CONDITIONS OF ADMISSION.

Applicants for admission to the Freshman Class (to take any one of the four courses given above) must pass a satisfactory examination in Spelling, Geography, English Grammar, Arithmetic, Elementary Algebra (including quadratic equations), History of the United States, Physical Geography, and Physiology. An applicant's knowledge of the common branches must be sufficient to entitle him to a teacher's certificate of good grade, and his knowledge of the elements of Algebra should be thorough. Applicants who have completed their course of preparation in High Schools, which hold the certificate of the State Board of Education, will be admitted without examination. See page 17.

SPECIAL SCHOOLS.

The several departments of the University, which provide special instruction for students who wish to pursue branches as *specialties*, are called *Special Schools*. The following Special Schools have been organized:

1. School of Agriculture and Horticulture.
2. School of Mechanics.
3. School of Industrial Art.
4. School of Chemistry.
5. School of Natural History.
6. School of Mechanical and Civil Engineering.

The courses of study in the first three of these Special Schools are the same as the special courses printed in italics in the corresponding regular courses which are outlined above.

The course in Chemistry adds to the instruction in the Junior year of the Scientific course one year in qualitative and quantitative analysis, instruction occupying five hours a week, and laboratory practice ten hours a week. The third year is devoted to Mineralogy, Metallurgy, and Assaying, or to Organic Chemistry, from six to eight hours a day being spent in the laboratory.

The school of Natural History provides two courses, one in Botany and one in Zoology, each adding two years of special study to the instruction in these branches, which is included in the regular Scientific course.

The course in Engineering covers a period of three years, the first two of which may be taken in connection with the Junior and Senior years of the regular Mechanical course.

REPORTS OF DEPARTMENTS.

The courses of study, outlined above, show that Purdue University has made generous provision for instruction in those branches of learning which are "related to agriculture and the mechanic arts," and it is believed that they fully justify its claim to the standing, if not the title, of a scientific and industrial college. The evidence of its scientific and industrial efficiency is presented with much greater fullness in the accompanying reports of the several departments, to which special attention is invited. These reports not only show what has been done, but they indicate, to some extent, the method by which the results attained have been worked out.

The details presented in these reports greatly enhance their value, and their annual publication will serve as a basis of comparison with the work done in other similar institutions, as well as afford evidence of the progress made from year to year.

DEPARTMENT OF AGRICULTURE.

This Department was organized and opened to students in September, 1879, and the first students were graduated in June last, three having completed the regular Agricultural course and one the Special course, then limited to three years. The instruction and training provided have given good satisfaction from the first, and the successive classes have shown more than ordinary interest and zeal in their studies. The discouraging feature is the comparatively small number of students who choose the Agricultural course. This difficulty is so intelligently stated, in a recent editorial in the *Indiana Farmer* (Oct. 21, 1882), that I quote as follows:

"Four years ago the friends of agricultural education were somewhat impatient over the delay in providing instruction in Agriculture in Purdue University. The authorities of the University explained the delay, and announced that they would organize an efficient Agricultural department at the opening of the next college year, and they kept their word. A practical and thorough course in Agriculture and Horticulture was adopted, and one of the best qualified agricultural instructors in the country was secured to take charge of the new department; and all this was done with the hope that there would be a corresponding demand for the superior instruction and training thus provided.

"What is the result? The course of instruction provided has been as practical and comprehensive as that furnished by any agricultural college in the country, and the instruction and management of the department have been satisfactory in a high degree. The University has done its duty fully, but have the friends of agricultural training in the State done theirs? The truth is that the number of students who have entered the institution to take this excellent agricultural course has been discouragingly small when compared with the increase in other departments. Four successive classes have entered with but little change for the better. What is the explanation?

"This result must be chiefly due either to a want of public confidence in the practical value of a knowledge of the principles and methods of agriculture, or to a feeling among farmers that there is little, if any, *present* need of instruction in such knowledge in this State. It may be that both of these conditions enter into the explanation. Such instruction is comparatively new, and its nature is imperfectly understood by our farmers. As a people, we are just awakening to the importance of a better style of agriculture, and we are just beginning to realize that successful farming in Indiana would be promoted by a knowledge of the sciences, and especially of the science of agriculture. Indeed there are comparatively few people who are aware that there is any science in agriculture, much less a science of agriculture.

"But are the intelligent agriculturists of Indiana as wanting in appreciation of the practical value of agricultural training as the small demand for such training would seem to indicate? In a recent conversation President White stated that nearly all the students who have taken this course, represent counties where active members of the State Agricultural Society have created an interest in agricultural training.

"This suggests the kind of work that ought to be done in every county in the State. The wide-awake intelligent friends of agricultural progress should talk up the practical value of agricultural training, and promising young men should be induced and encouraged to enter Purdue and take the Agricultural course. There ought to be a hundred sons of intelligent farmers in Purdue taking its excellent course in agriculture. If Purdue could send annually one thoroughly trained agriculturist into each county of the State, it would soon effect a great improvement in the farming of Indiana. But if the University is to undertake the task of creating a demand for the industrial training which it was founded to furnish, the progress made will be slow.

"There is a growing industrial spirit in Purdue, the change in two years being very encouraging, and the Faculty is, we believe, doing all in its power to make the industrial courses popular and successful. The Purdue industrial exhibit at the late State Fair was worthy of the interests represented and a great credit to the College."

It is hoped that the change in the course of study, which provides an excellent short course of two years in agriculture proper (see above), may result in an increase in the number of students in this department. The special agricultural instruction in the first year of this course is devoted to stock, including the breeding, feeding, and care of domestic animals, and the elements of veterinary science, including obstetrics and the more

common diseases and injuries to which these animals are subject. The instruction of the second year relates to tillage, the selection and rotation of crops, drainage, farm economy, etc. This short course also includes biology, botany, zoology, physics, geometry, trigonometry, surveying, industrial drawing, and other branches of practical value. The student who takes this course, will have not only a good knowledge of agriculture, but also of surveying and leveling, of drainage, including the laying out of drains, the use of carpentry and blacksmithing tools, the elements of the natural sciences, and a good general education for all ordinary purposes. The young man who has the time and means to go on and complete the remaining two years of the course, will obtain, in addition, a practical knowledge of the various departments of Horticulture, Agricultural Chemistry, Agricultural Experiments, and other branches of great value to a progressive agriculturist.

The Agricultural department is now provided with a suitable building (Agricultural Hall), which was erected last year. It is located on the experimental grounds and is designed for use in connection with the experimental work, as well as for the purposes of instruction. It is a valuable addition to the appliances of the department. The front part is 44 by 32 feet. The lower floor contains an office, where are kept the indoor meteorological instruments, a room for an agricultural museum, a seed room, and a tool room. The second floor contains a well lighted and conveniently arranged class room for instruction and lectures, a dissecting room, and a room for the occupancy of the assistant in charge of the building and instruments. The rear part of the building is a large store room 56 by 24 feet, divided into small compartments for the storage of the products of the experimental plats, and supplied with a drive-way in which is located a pair of scales for weighing all experimental products, fertilizers, etc. The building is a plain but substantial structure, and is surmounted by a deck and balustrade, where are mounted the outdoor instruments exposed to wind and rain. The department is supplied with a complete set of meteorological instruments, purchased through the United States Signal Service office. For cut of building, see report of the department.

THE EXPERIMENTAL STATION

In which Agricultural Hall is situated was permanently located and laid out in April, 1880. The field contains ten acres, and is laid out in large plats, eighteen rods long and ten rods wide, and each large plat is subdivided into eighteen smaller plats, ten rods long and one rod wide, each plat containing one-sixteenth of an acre. These plats are used for series of experiments of various kinds, the results being carefully recorded and annually published. The present report contains the third annual series of results which have been tabulated. The experimental work undertaken by Purdue University, has already attracted wide notice, and it promises most valuable results in the near future. It is estimated that the expense involved in carrying forward these experiments will not exceed \$1,000 a year, certainly a small expenditure for so important an undertaking.

The work in

HORTICULTURE

Has greatly improved within two years. A propagating house, 83 by 13 feet, was added to the greenhouse last year, and most of the space was soon filled. The plants not needed for the ornamental beds on the grounds and for class instruction, are readily sold, the demand exceeding the supply. Both buildings are now filled with choice plants in excellent condition, and it is expected that the sales of the surplus plants next season will pay a good part of the running expenses of the conservatory for the year. It is the general testimony of visitors that the grounds have never been kept in as good condition as they have been the present season. The lawns have been greatly improved, and a few ornamental beds have added much to their beauty. The growth of the hedges, shrubbery, and young trees has been more than usually rapid. The number of evergreen trees of different varieties in the nursery exceeds the demand, and since most of these trees will be too large to transplant, if not removed next spring, it is suggested that from one to six trees be given to any farmer who will take the trouble to remove them. The University would thus contribute something to the improvement of farmers' homes in its

vicinity. The campus will require much attention next year, and, with such attention, it can be made increasingly worthy of an institution which makes Horticulture one of its specialties.

THE FARM.

The change in the management of the farm, adopted by the Board in June, 1881, took effect the first of March last, the Professor of Agriculture then assuming control. It is proper to say that Professor Ingersoll found the farm in a not very creditable condition. The buildings and fences, having received but little attention for a year or more, were badly needing repairs. The implements, almost without exception, were unfit for use, and things generally showed neglect. This state of things was due to the fact that the person in charge of the farm had not regarded himself directly responsible for its condition, and hence had not felt due personal interest in its success. It is earnestly hoped that the present plan will be more satisfactory. The Professor of Agriculture being the responsible manager of the farm, will certainly feel a personal interest in its condition as well as financial success. The change effected in one short season is a gratifying promise that the condition of the farm will soon be a credit to the College.

The credit of the improvement made in the practical workings of the farm is due, in good part, to Mr. R. H. McDowell, who began work as foreman March 1. He had formerly occupied a similar position in the Michigan Agricultural College, and brought to his work here valuable practical experience. The fields were cultivated admirably, and the crops were harvested in good condition. The work could not have been done with greater care and economy if he had felt himself pecuniarily interested in the result. Mr. McDowell resigned in October, to accept the position of farm superintendent of the Michigan Boys' Reform School.

Professor Latta took charge of the farm in August, and the good work begun by Professor Ingersoll is continued. His plans for improving the stock, for conducting experiments in feeding, for arresting the deterioration of the soil, etc., have my hearty approval. It is hoped that the improvement effected the coming year may be satisfactory to all interested.

Mr. Wm. O. Fritz, of the Michigan Agricultural College, began work as foreman of the Farm on December 1. He also brings to his duties good agricultural training and practical experience.

The unsatisfactory balance in the farm account for the year 1881 was due to the comparative failure of the wheat and corn crops, there being not more than half the usual yield, and the grain, especially the corn, being of poor quality. The corn was injured by the excessive drought, and the wheat by the dry weather when sown, and also by the severe winter.

DEPARTMENT OF PRACTICAL MECHANICS.

The very full statement of the work, condition and needs of this department, made in the accompanying report, gives all needed information in these directions. It is only necessary to say here that its equipment and accommodations have been greatly improved within the past two years, and the work done has been increasingly satisfactory. At the opening of the last College year, the course of training was much improved by supplementing the shop practice with instruction in the principles and methods of mechanic art, and also by increasing the time devoted to mechanical drawing. The re-opening of the School of Engineering this year permits students to continue their mechanical training through the Junior and Senior years.

The system of mechanical training adopted here is no longer an experiment. Its value has been made too evident for doubt or question, and, what is more conclusive, students who have taken the course, are attesting its utility in the work shops of the State and as inventors. But it should, perhaps, be stated with clearness that the aim of the course is not simply to fit men to fill the place of the common artisan, but specially to prepare them, with added experience, to take important positions as foremen, superintendents, engineers, and inventors. A system of mechanical training that imparts skill of mind as well as skill of eye and hand, fits the student for head-work as well as hand-work, and all the doors leading to the higher grades of artisanship open at his touch. It may be added that the excellence of the mechanical department of Purdue University has been strongly commended by competent judges in this and other States. The last annual report of the State Board of

Education of Massachusetts devotes over three pages to an account of its method of instruction, and the plan and equipment of the shops—the plan being shown by an engraved cut.

Attention is specially called to the fact that the Mechanical department of the University has outgrown its accommodations, and that its future growth and success demand the immediate erection of a suitable building for its use. The shops are in the basement story of the laboratory, and all available space is occupied. The main shop was somewhat enlarged last year, but the addition of new machines and tools, and the increase of students, make it even more crowded and inconvenient than it was two years ago. It was never expected that the rooms would afford permanent accommodations, but it was hoped that they could be used long enough to show the practical value of such a department, and this has been done. All the fixtures, machinery, and other appliances can be readily transferred to a new building, and the rooms in the laboratory building, thus vacated, will serve a useful purpose in connection with the department of Chemistry and Physics. It is estimated that a suitable building can be erected and fully equipped, using present fixtures and appliances, for a sum not exceeding \$10,000.

DEPARTMENT OF INDUSTRIAL ART.

This school has grown from a small beginning to a leading position among the departments of like character connected with the Industrial Colleges of the country. It is believed that it has no superior, if it has an equal, either in instruction or in accommodations and appliances. Its training forms an essential element in each of our regular courses of study, and its practical value is more and more manifest. All of the students devote one hour daily to drawing during the Freshman year, and the Sophomore students are permitted to elect Industrial Art in place of History, devoting two hours daily to the course, which includes light and shade, light and color, and historical ornament. The students in Mechanics devote a full year, two hours daily, to machine drawing.

Before the opening of the present College year, a new regular college course was arranged, consisting of the same studies as

the regular Mechanical course, with the exception of the shop work and instruction in Mechanics. In the place of this part of the Mechanical course is substituted two years' instruction in Industrial Art, consisting of clay-modeling and wood-carving in the Freshman year, and flat decorative design and applied design in the Sophomore year. It is called the Industrial Art course, and is given above (p. 30).

These several courses of instruction and practice are given somewhat in detail in the accompanying report of the department. The present special need is a suitable hall for a museum. The present rooms afford no space for the exhibition of even the accumulating work of the students, a hallway being now used for this purpose. The expenditure of a few hundred dollars would provide a fine hall for a museum in the building in which the department is located, and an annual expenditure of a few hundred dollars would soon fill it with valuable pieces of workmanship for illustration and study.

DEPARTMENT OF CHEMISTRY AND PHYSICS.

Since the last report of this department important additions have been made to the apparatus and other appliances of the Chemical Laboratory. A room has been specially fitted up for the analysis of fertilizers and other work contemplated by the General Assembly in creating the office of State Chemist. New furnaces and other fixtures for assaying have been supplied, and important improvements have been made in the students' laboratory. Quite a large amount of glass, porcelain, and platinum ware has been imported from Germany, and a somewhat expensive polariscope has been imported from Paris for use in sugar investigations, the instrument being the one used in all official sugar work by the French government. In importing this and all other apparatus for the University, advantage has been taken of the tariff regulation, which permits apparatus, books and other appliances for college use to be imported free of duty. The saving on apparatus thus effected is about forty per cent.

The equipment and supplies of the Chemical Laboratory have required a comparatively large outlay from the beginning, and no first-class laboratory of this kind can be sustained without a

considerable expenditure. In view of this fact, the students in Chemistry are charged \$15 per year for chemicals and gas, while in the other departments of the University no charge is made for materials used in regular class work. In all departments students are required to make good all breakage, and in the Chemical Laboratory the annual breakage charges average from \$10 to \$15 per student—very much more than in any other department.

The expenditures for laboratory purposes last year were somewhat greater than was anticipated, owing, in part, to the demands made by the act which imposed upon the Professor of Chemistry in Purdue University the duties of State Chemist. This necessitated not only the fitting up of a new laboratory for this special work, and the supply of expensive chemicals, but the employment of an assistant, to whom, under the direction of the State Chemist, the analytic work was intrusted. The entire expenditure for this State work last year, including the fitting up of the special laboratory, the salary of the Assistant Chemist, the cost of chemicals, etc., was over \$800, while the compensation received by the University for the twenty-four analyses made was \$48. It is true that this entire cost was not due solely to the State work, since the Assistant Chemist did analytic work for the Agricultural department, and also for other parties. The University does not complain of this demand on her resources, but, on the contrary, is pleased to serve the agricultural interests of the State in all practicable ways; but it is questionable whether the requirements of the law which provides for the chemical analysis of commercial fertilizers, affords the farmers of the State the desired protection against the sale of poor fertilizers. There seems to be little certainty that the fertilizers offered for sale a few weeks after the analysis are the same as those analyzed, and there is no certainty that the fertilizers that may be sold next year will be the same as those analyzed this year. Manufacturers are not likely to pay the expense of a new analysis so long as the old certificate will answer their purpose. It is also questioned whether these certificates of the State Chemist of Indiana are not likely to be improperly used in other States to cover the sale of comparatively worthless fertilizers. The law provides a cheap way for the manufacturers of fertilizers to secure a

State Chemist's certificate. All that is necessary is to put a superior quality of the article on sale in Indiana, and submit a sample to the State Chemist for analysis, and thus, for \$2 and the cost of labels, they can secure an official certificate of analysis to use in other States to cover an inferior article; but, of course, this does not affect the farmers in Indiana.

Special attention is called to the suggestions and recommendations of the State Chemist, and also to the results of the analyses made, the results of sugar investigations, and other chemical work of practical interest, all given in the accompanying report. Although the building used as a chemical laboratory, was constructed specially for this purpose, it is not as well suited as is desirable for the best chemical work; but its most serious defects, including imperfect ventilation, can be remedied at a comparatively small cost. As soon as the mechanics' shops can be removed, the building should be remodeled in some respects and put in thorough repair.

There has been no marked improvement in the department of Physics. The course of study remains the same, being limited to the second and third terms of the Sophomore year, when elementary instruction only is practicable, this being largely by illustrative and experimental lectures. This should be accompanied by laboratory work by the students, and to this end the laboratory ought to be supplied with complete sets of working apparatus. Physics is a science of great practical importance, and it should have as prominent a place in a school of science as Chemistry, and the necessary apparatus for efficient instruction by modern methods should be supplied. In the Ohio State University the chair of Physics is one of the most important departments of the institution. The same is true in several other scientific colleges.

DEPARTMENT OF NATURAL HISTORY.

The progress made by this department in the past two years has been most gratifying. The museum and cabinets have been increased by the purchase and exchange of minerals, by valuable donations from the Smithsonian Institution and the Forestry Department of the Census Bureau, and especially by the purchase of a large and choice collection of the Hon.

Joseph Gardner, M. D., of Bedford, Ind., a collection estimated by Prof. John Collett, State Geologist, and other competent judges, to be worth four times the price paid for it. Dr. Gardner desired to see the collection transferred to Purdue University, and generously put the price at about one-fourth of the value. Additional cases have been supplied, and the specimens have been classified and arranged. Most of the specimens in the "Owen cabinet," purchased in 1874, need to be determined and located, and a specialist should be employed to do this work at an early day.

But the greatest change in the department is in methods of instruction and study, the substitution of systematic laboratory practice for the ordinary text-book study and recitation. The text-book and recitation still have a place, but the means chiefly relied upon for acquiring a knowledge of plant and animal life is the study of the actual objects that embody such life. To make such study possible, the laboratory of Natural History has been equipped with compound and dissecting microscopes for the use of students; with projection apparatus, including a superior lantern, illuminated with electricity generated by the Gramme machine; and with anatomical models and skeletons in Zoology. A room has also been fitted up temporarily for the determination of minerals, including blowpipe analysis. The numerous objects for study in the museum are supplemented by those secured from time to time for the express purpose of dissection and examination.

The number of microscopes now in use (18) is not sufficient to supply all the students, and so the Freshman class is obliged to do laboratory work in two sections, which nearly doubles the time required for its instruction and oversight. At least as many more microscopes should be purchased before the opening of the next College year. There are still serious deficiencies in the cabinet and museum collections which should be supplied as early as possible. The appropriations for this department should not be reduced, but should rather be increased. In another place (p. 23) attention has been called to the importance of dividing this department at an early day, and creating two chairs; but the immediate need is the employment of a Curator, to take charge of the museum and cabinets. The instruction of the present classes now demands

the entire time of the Professor in charge, and the admission of special students in Botany and Zoology, already begun, will require increasing attention. Even when two chairs are created, there will be continued need of an efficient Curator.

DEPARTMENT OF MATHEMATICS AND ENGINEERING.

The instruction in pure mathematics in Purdue University is as extensive and thorough as the courses in the classical colleges, while the attention given to applied mathematics, including surveying and engineering, is greater than in most of these colleges. Several of the Purdue graduates and students hold the position of County Surveyor, and Mr. Elwood Mead, of the class of '82, is now an assistant in the U. S. Engineering Corps, engaged in the improvement of the Wabash River.* The attention given in the Purdue course to geometrical and mechanical drawing, platting and field-work in surveying and leveling, gives its students a decided practical advantage over those taught in the usual way.

The opening of the school of Mechanical and Civil Engineering will greatly increase these advantages. The department has a small beginning, but this is not an unusual experience. Its opening was announced at a late day, and those desiring to take the course were, with one exception, not prepared.

OTHER DEPARTMENTS.

The accompanying reports of the departments of English and History, Latin and Elocution, Military Tactics, and the Academy, contain full information respecting their progress and condition, and only a few statements need be added.

The increased attention paid to English studies in the high schools and colleges of the country is a change in the right direction. The importance of such training in a school of science and industry, where only a limited time can be devoted to linguistic studies, is evident. Whatever may be true of the value of a study of other languages, the direct and shortest road to a practical knowledge of English is the preferable one in such an institution. Its aim is not to make literary scholars or to

*Since the writing of this report, Mr. Mead has entered on his duties as Instructor in Mathematics and Engineering in the State Agricultural College of Colorado.

prepare men for the so-called learned professions, but to prepare men for industrial and scientific pursuits, and the essential element in such preparation, so far as language is concerned, is thorough training *in the use of good English*, the imparting of the ability to write and speak the language with respectable accuracy and effectiveness, to say nothing of elegance in style or diction. It seems at least desirable that an educated man, though engaged in scientific or industrial pursuits, should be able to pronounce correctly the words he uses, and to use good English, and it would certainly be a great advantage to such a man to possess a taste for the ennobling literature of the English-speaking race. The most speedy, as well as effective way, of imparting such skill and appreciation is direct training in the use of the language and a thorough and inspiring study of English literature. The mastery of other languages will help, but nothing can take the place of systematic and continued training *in English*.

The course of English instruction in Purdue is begun in the Academy, where it receives special attention, and is continued through the entire College course. It includes Composition and Analysis, Rhetoric, English Literature, and Elocution. The aim of the drills in Elocution is chiefly to train the student in the accurate pronunciation of words and the effective vocal expression of thought, emotional oratory receiving comparatively little attention. The desire and purpose is to make this training in English as thorough and efficient as the present admirable instruction in Latin.

At the opening of the present year, the students of the Sophomore class were given their choice between History and Industrial Art as a fourth study for the year, and, as a result, the class is divided into two nearly equal sections. The plan was tried as an experiment, and since a regular Industrial Art course has been adopted, it may not be best to continue this choice after the present year. The study of history is too desirable a part of any course of higher education to be omitted, except in cases where the student has neither the taste nor the ability to acquire historical knowledge.

We have alluded to the arrangement by which the services of Lieut. W. R. Hamilton, U. S. A., were secured the past and the present year as instructor in Military Tactics. The company

has been small, but it has acquired great efficiency. The cadets are now neatly uniformed. It was stated in the last report that it was doubtless the purpose of Congress to make the land-grant institutions supplementary to the United States Military Academy at West Point, in preparing officers for the army, the latter for the regular army and the former for the volunteer service in time of war. To this end, it is not necessary that all the students in the land-grant colleges receive military training, but it is important that those who are thus trained be thoroughly prepared for military service in case of war. The value of the military drill as a means of physical training (important from the college standpoint) is a secondary consideration, so far as the United States Government is concerned. This view shows the importance of placing the military departments in all these institutions in charge of men who have themselves received a thorough military training. The propriety of making the drill compulsory, at least during the first three years of the College course, is strongly urged by Lieut. Hamilton.

The Academy has made good progress during the past two years, notwithstanding a slight decrease in the number of students. The raising of the standard of admission, the increased attention given to practical instruction in English, and to several other branches, have improved the character of the instruction. It affords excellent advantages to young people who wish thorough instruction in preparatory branches. The course of study is so arranged that students who pass a satisfactory examination in Arithmetic, Geography, English Grammar, Reading, and Spelling, can prepare for the Freshman class in one year.

RECEIPTS AND EXPENDITURES.

The receipts and expenditures of Purdue University for the College year ending June 30, 1882, were as follows:

RECEIPTS.

Endowment Fund.

From interest on Indiana State Bond	\$17,000 00
---	-------------

Current Receipts of University.

From fees paid by students (added to endowment income).....		\$1,611 05
From room-rents by students and instructors.....	\$864 34	
From fees for chemicals and gas in Laboratory.....	207 00	
From charges for breakage in Laboratory.....	172 87	
From proceeds of coal and gas sold.....	357 23	
From sales of trees, plants, and flowers (horticultural)	591 99	
From sales of products of experimental station.....	56 85	
From charges for keeping horses and use of stalls	161 40	
From miscellaneous sources.....	223 42	
		2,635 10

Current Receipts of Farm.

From sales of farm products and pasturage.....	\$683 22	
From sales of stock (horse, \$250).....	324 35	
From charges for hauling coal, etc., for University.....	524 90	
		1,532 47

State Appropriation.

From State Treasurer, November 2, 1881	\$20,000 00
Total receipts.....	\$42,778 62
Balance in treasury July 1, 1881.....	1,789 11
Total available resources.....	\$44,567 73

EXPENDITURES.

Current Expenses of University.

For salaries of President, Professors, and Instructors.....	\$18,067 60
For salaries of Registrar and Librarian, Assistant Chemist, and Assistant Instructors.....	1,450 00
For heat, light, and water, including repairs	\$5,657 06
For general repairs and supplies.....	2,048 99
For janitor work in all the buildings.....	622 49
For agricultural experiments, including supplies	515 05
For care of green-houses and campus.....	1,163 76
For other current expenses.....	1,939 50
	<hr/> 11,946 85

Current Expenses of Farm.

For labor	\$1,130 27
For supplies and repairs.....	372 04
For stock-breeding, etc.....	77 65
	<hr/> 1,579 96

Trustees and Officers.

For per diem and mileage of Trustees.....	\$479 65
For salaries of Treasurer and Secretary....	1,000 00
	<hr/> 1,479 65
Total current expenses.....	<hr/> \$34,524 06

Improvements.

For sundry improvements in buildings....	\$298	79
For new Agricultural building.....	3,970	04
For gas fixtures and furnishing building..	115	15
For specimens, apparatus, and fixtures in Natural History.....	1,766	17
For apparatus and fixtures for Laboratory..	1,216	57
For apparatus and fixtures for State Chem- ist	157	25
For machinery, tools, and fixtures for Me- chanics' Shop.....	927	51
For appliances and fixtures for Industrial Art.....	258	26
For apparatus for other departments.....	38	50
For lumber for scales for Experimental Station.....	23	89
For books and periodicals for Library.....	449	69
For propagating house, with heaters.....	1,209	92
For other general improvements.....	488	08
		<hr/>
		10,919 82
For improvements on farm (well and harvester).....		503 22
		<hr/>
Total expenditures.....	\$45,947	10

The total current expenses, not including the farm, was \$32,944.10, the cost of instruction being \$18,250.93, and the other expenses amounting to \$14,693.27. The cost of heat, light, and water continues to be a large item, the cost last year being \$569.33, greater than in the previous year, but this was due to the extensive repairs made in the summer of 1881, to insure safety and greater economy. These included the thorough repair of four large boilers, the uncovering of the underground steam pipes and encasing them in wooden tubes, with a brick and tile conduit, and other repairs, all costing in the aggregate \$1,249.99, against \$130.79 the previous year. The cost of coal, coke and lime was \$3,228.07, against \$3,835.07 the previous year, the winter being much less severe.

The repairs of so large a group of buildings, with the furniture, apparatus, and fixtures, necessarily make a considerable item of expense, and this will increase from year to year. It

is always economy, as well as advantage, to keep college buildings in good condition. All the buildings, with the exception of Agricultural Hall, need repainting, and this should be done in the next summer vacation. The campus will also require increased attention and labor next year.

The following statement shows the purposes for which the State appropriation of \$20,000, received November 2, 1881, was expended:

Department of Agriculture.

New building, fixtures, and furniture.....	\$4,109 08	
Labor and supplies for Experimental Station (less sales).....	450 45	
	<hr/>	\$4,559 53

Department of Horticulture.

New propagating house and heaters.....	\$1,209 92	
Labor and supplies, less sales (\$591.99)....	571 77	
	<hr/>	1,781 69

Department of Mechanics.

Machinery, tools, and fixtures.....	\$927 51	
Improvement of shops (\$158.22) and supplies.....	327 03	
	<hr/>	1,254 54

Department of Chemistry.

Apparatus and fixtures.....	\$1,373 82	
Supplies and assistance.....	992 10	
	<hr/>	
Total	\$2,365 92	
Less fertilizer fees and breakage charges..	220 87	
	<hr/>	2,145 05

Department of Natural History.

Specimens, apparatus, and fixtures.....	1,766 17
---	----------

Other Departments.

Appliances and fixtures.....	\$296 76	
Books and periodicals.....	449 69	
	<hr/>	746 45
General improvements.....		488 08

Current Expenses.

Repairs of steam boilers and fixtures.....	\$1,249 99	
Compensation of Trustees and officers.....	1,479 65	
Other current expenses (in part).....	4,528 85	
	<hr/>	7,258 49
Total.....		\$20,000 00

The large expenditure for the better equipment of the Departments of Agriculture and Horticulture made it necessary to reduce the allowances to the department of Industrial Art and several other departments, and even then it left too small a balance for current expenses.

It is estimated that the current expenses of the University the present year will be about \$33,000, while the current receipts, including interest on United States Endowment Fund, fees and charges, paid by students, trees and plants sold, etc., will not exceed \$21,000. This will leave a balance of \$12,000 to be paid from the State appropriation, leaving only \$8,000 available for improvements of all kinds, and for running expenses from July 1 to November 1, 1883 (four months), when the next appropriation by the State will be received. The running expenses for these four months, thus paid, will be about \$3,000. This will permit an expenditure of only \$5,000 for improvements, and the most of this has been used. It is thus seen that the appropriation asked for by the Trustees two years ago, and allowed by the General Assembly, did not equal the needs of the Institution. Appliances greatly needed in several departments have not been supplied, and the necessity of running the University *sixteen* months on a year's income will necessitate the postponing of these improvements another year.

STATE APPROPRIATION NEEDED.

The foregoing statements and exhibits show that, if the important work now undertaken by Purdue University is carried forward and made a worthy success, the income of the Institution from its endowment fund and from fees and other current sources, must be supplemented by liberal appropriations by the State. Several of its most important departments have made only a promising beginning, and their present equipment is wholly inadequate for future growth. Expenditures for these purposes must be continued and increased from year to year. It is impossible to run a college of science and industry on the income of an ordinary classical college.

The following are the estimates of the annual expenditures for the next two years, to be provided for by State appropriation :

Current expenses, including supplies, repairs, labor, etc., but not including salaries of officers or instruction.....	\$10,000
Per diem of Trustees, salaries of Treasurer, Secretary, and Registrar.....	2,250
Labor and supplies for Experimental Station.....	1,000
Labor and supplies for green-house, nurseries, and campus.....	1,000
Machinery, tools, and fixtures for Mechanics Shop.....	1,000
Labor and supplies for Mechanics Shop.....	1,000
Industrial Art appliances and supplies.....	1,000
Works and fixtures for Industrial Art museum.....	1,000
Chemical apparatus and fixtures, assistance, and supplies.....	1,750
Physical and engineering apparatus and supplies.....	1,000
Specimens, etc., for cabinets and museum.....	1,000
Natural history apparatus, fixtures, and supplies.....	1,000
Apparatus and fixtures for other departments.....	1,000
Books and periodicals for library.....	1,000
Total annual appropriation needed.....	\$25,000

It is hoped that the General Assembly may not only make the University this needed appropriation of \$25,000 a year, but

that it may be made a continuous appropriation. The necessity of appealing to the General Assembly every two years, not only for money for improvements, but to pay the necessary running expenses of the Institution, makes its future uncertain and discourages private bequests. I am confident that wealthy citizens of Indiana will be ready in the near future to equip and endow important departments in the University, when satisfied that such bequests will not lessen the support of the University by the State.

In addition to the regular appropriation of \$25,000, a special appropriation of \$10,000 will be needed to erect and equip a suitable building for the department of Practical Mechanics, and make needed improvements in the Laboratory.

ENDOWMENT AND EQUIPMENT OF PURDUE UNIVERSITY.

Purdue University in its endowment and equipment is the property of the State of Indiana, held in trust for the promotion of the great industries of the people, and with the sacred obligation to make it efficient and successful. The value of the property thus invested and the sources from which it has been derived, are matters of public interest, and the following tabular statement has been compiled with the hope that it may not only present this information, but that it may also indicate the present importance and the future possibilities of the institution:

LAND.

One hundred acres land (estimated value, 1875)*..	\$30,000 00
Eighty-six and one-half acres land, purchased.....	25,500 00
Two and one-half acres land, purchased at appraised value.....	2,500 00
	<hr/>
Total, July 1, 1876.....	<u>\$59,000 00</u>

*Donated by Nicholas Marsteller, John Opp, Silas Steeley and Mrs. Rachel Russell. The land was deeded by them to John Purdue, and by him to Purdue University.

FARM BUILDINGS.

Prior to July 1, 1876.

Farm-house and stables.....	\$3,433 21
Barn and granary.....	4,022 62
Fencing, wind-mill, implements, etc.....	691 65
Other improvements.....	936 37
	<hr/>
	\$9,083 85

From July 1, 1876, to June 30, 1882.

Implements and other improvements.....	695 89
	<hr/>
Total.....	\$9,779 74
	<hr/>

COLLEGE BUILDINGS.

Prior to July 1, 1876.

Young Mens' Dormitory.....	\$34,282 29
Boarding House.....	41,249 99
Chemical Laboratory.....	15,892 88
Military Hall.....	6,478 67
Engine House.....	4,814 00
Charges of architects and superintendents on five buildings.....	1,820 00
Foundation of building (not erected).....	6,318 74
Stable.....	1,666 47
	<hr/>
Total, July 1, 1876.....	\$112,523 04

From July 1, 1876, to June 30, 1882.

University Hall.....	\$33,380 48
Agricultural Hall.....	3,970 04
Peirce Conservatory(donation)..	\$993 65
Heating and water fixtures.....	623 43
	<hr/>
	1,617 08
Propagating house.....	\$712 14
Heating and water fixtures.....	497 78
	<hr/>
	1,209 82
Boiler and coal house (re-building).....	1,499 24
Improvements in different buildings...	1,617 53
	<hr/>
	43,294 19
	<hr/>
Total invested in college buildings.....	\$155,817 23
	<hr/>

STEAM, WATER, AND GAS FIXTURES.

Prior to July 1, 1876.

Boilers, steam fixtures, gas works and fixtures, engines, pumps, etc.....	\$30,656 44
--	-------------

From July 1, 1876, to June 30, 1882.

Steam, gas, and water fixtures (Univer- sity Hall).....	\$3,405 54
Steam, gas, and water fixtures (other buildings).....	1,592 52
	<hr/> 4,998 06

Total	<hr/> \$35,654 50 <hr/>
-------------	-------------------------

FURNISHING BUILDINGS.

Prior to July 1, 1876.

Boarding House.....	\$4,603 55
Young Mens' Dormitory.....	2,311 12
College rooms	720 09
	<hr/> \$7,644 76

From July 1, 1876, to June 30, 1882.

University Hall*.....	\$1,867 80
Other buildings.....	914 21
	<hr/> 2,782 01

Total	<hr/> \$10,426 77 <hr/>
-------------	-------------------------

GROUNDS.

Prior to July 1, 1876.

Grading, putting in drains, planting nursery, mak- ing walks, etc.....	\$9,707 13
---	------------

*This includes \$440 for platform book-cases, and tables for Library.

From July 1, 1876, to June 30, 1882.

Grading, putting in drains, making drives and walks, removing nursery, planting trees, etc.....	1,712 52
Total.....	<u><u>\$11,419 65</u></u>

MISCELLANEOUS IMPROVEMENTS.

Prior to July 1, 1876.

General improvements.....	\$1,165 49
<i>From July 1, 1876, to June 30, 1882.</i>	
General improvements.....	1,842 95
Total.....	<u><u>\$3,008 44</u></u>

CABINETS AND MUSEUM.

Prior to July 1, 1876.

Geological specimens (Owen).....	\$821 30
Microscope (total cost).....	881 66
Cases for specimens.....	431 50
	<u>82,134 46</u>

From July 1, 1876, to June 30, 1882.

Cases and other fixtures.....	\$972 17
Specimens, models, etc.....	2,689 03
Microscopes.....	679 86
	<u>4,341 06</u>
Total.....	<u><u>\$6,475 52</u></u>

CHEMICAL LABORATORY.

Prior to July 1, 1876.

Apparatus and fixtures.....	\$1,516 35
-----------------------------	------------

From July 1, 1876, to July 1, 1882.

Apparatus and fixtures.....	2,783 27
Total	<u>\$4,299 62</u>

PHYSICAL LABORATORY.

Prior to July 1, 1876.

Apparatus and fixtures.....	\$1,942 79
-----------------------------	------------

From July 1, 1876, to July 1, 1882.

Apparatus and fixtures.....	2,752 65
Total	<u>\$4,695 44</u>

MATHEMATICAL DEPARTMENT.

Prior to July 1, 1876.

Engineering apparatus.....	\$463 60
Globes.....	126 00
	<u>589 60</u>

From July 1, 1876, to July 1, 1882.

Telescope	\$422 16
Other apparatus	54 30
	<u>476 46</u>
Total	<u>\$1,066 06</u>

INDUSTRIAL ART.

From July 1, 1876, to July 1, 1882.

Fitting up lecture and drawing room.....	\$344 02
Drawing tables	330 00
Apparatus and other appliances.....	964 03
Total	<u>\$1,638 05</u>

MECHANICAL DEPARTMENT.

Machinery and fixtures (1876).....	\$1,178 66
Fitting Mechanics Shop.....	160 23
Machinery, tools, and fixtures.....	2,026 18
Total.....	<u>\$3,365 70</u>

AGRICULTURAL DEPARTMENT.*

Meteorological instruments.....	\$138 13
Fencing experimental field.....	109 65

Glassware and other appliances.....	89 94
Total.....	<u>\$635 16</u>

OTHER DEPARTMENTS.

Apparatus and other appliances.....	<u>\$386 65</u>
-------------------------------------	-----------------

LIBRARY.

Prior to July 1, 1876.

Books and periodicals.....	\$2,118 53
----------------------------	------------

From July 1, 1876, to July 1, 1882.

Books and periodicals.....	2,870 62
Total.....	<u>\$4,989 15</u>

*For Experimental Station—not including the farm.

RECAPITULATION.

Land	\$59,000 00
Farm buildings and implements.....	9,779 74
College buildings.....	155,817 23
Steam, water, and gas fixtures.....	35,654 50
Furnishing buildings.....	10,426 77
Improvement of grounds.....	11,419 65
Other improvements.....	3,008 44
Apparatus, cabinets, and other appliances.....	22,562 20
Books and periodicals.....	4,989 15
Total.....	<u>\$312,657 68</u>

Prior to July 1, 1876.....	\$239,212 10
From July 1, 1876, to July 1, 1882.....	<u>73,445 58</u>

Bequests.

John Purdue.....	\$150,000 00
Tippecanoe county.....	50,000 00
Marsteller, Opp, Steeley and Russell (land).....	30,000 00
Total.....	<u>\$230,000 00</u>

State Appropriations.

In 1873, for improvements.....	\$60,000 00
In 1875, for two years.....	20,000 00
In 1877, for two years.....	19,500 00
In 1879, for two years.....	9,000 00
In 1881, for two years.....	40,000 00
Total.....	<u>\$148,500 00</u>

Endowment Fund.

Indiana bond, at 5 per cent interest.....	<u>\$340,000 00</u>
---	---------------------

It is seen from the above summary that the cash value of the property in possession of Purdue University, July 1, 1882, was \$312,657.68, exclusive of its endowment fund. The cost of the buildings includes the loss occasioned by the burning of the boiler and coal house in 1877, and the abandoning of the building foundation, constructed in 1875. The total cash value of the lands, buildings, fixtures, and other property, known as improvements, is, in round numbers, \$300,000, making the total cash value of the property, including the endowment fund, \$640,000.

It is believed that the \$73,445.58 invested in improvements since July 1, 1876 (an average of only \$12,000 a year), represents property worth more than its cost, and the same is doubtless true of much of the property representing improvements made prior to 1876, though prices were then high. The three buildings erected under the writer's supervision (the main college building, the agricultural building, and the green houses), could not be re-erected for the money, and the most rigid economy has been used in all the other improvements.

Attention is also called to the suggestive fact that the donations and bequests made to secure the location of the University in Tippecanoe county are about *seventy-five per cent.* of the total cost of all these improvements. These generous donations, amounting to \$230,000, and the United States Endowment Fund of \$340,000, representing the land grant by Congress, together constitute a total munificent bequest of \$570,000 to the State of Indiana, for the equipment and endowment of a "College for the benefit of Agriculture and the Mechanic Arts."

Purdue University is no longer an experiment or a promise. Two years ago I was able to say:

"The resources, so far, at its command have enabled Purdue University to pass, in six years, from a hopeful possibility to a recognized success. It stands before the people not merely with plans and promises for the future, but actually and successfully meeting the requirements of the Act of Congress which endowed it, and of the law of the State which provided for its organization. Its two-score students have increased to over two hundred, and confidence and commendation are fast taking the place of doubt and criticism. The tide in its affairs has reached the flood, and the State has now the opportunity to make its prosperity and usefulness continuous and sure."

The General Assembly improved this opportunity by appropriating \$40,000 for two years, \$20,000 being paid in 1881 and \$20,000 in 1882, the full amount then asked for by the Board of Trustees. The progress in industrial appliances and training, secured and made possible by this liberal appropriation, has been marked, much exceeding the progress of any two preceding years, and it is believed that the General Assembly of 1883 will esteem it a privilege, as well as a duty, to make this progress continuous.

Most respectfully submitted,

E. E. WHITE,

President of Purdue University.

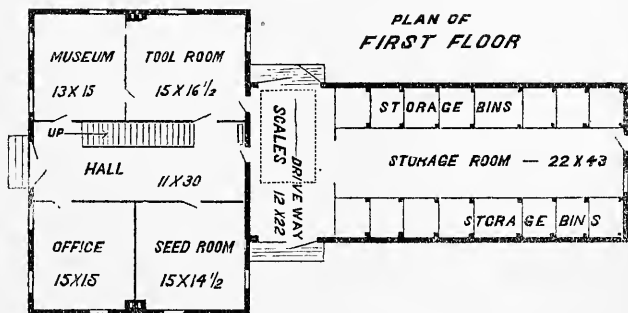

DECEMBER 11, 1882.

ACCOMPANYING REPORTS.

Agricultural Hall.

REPORT

OF THE

DEPARTMENT OF AGRICULTURE AND HORTICULTURE.

To the President of Purdue University:

I herewith submit a detailed statement of the working of the various lines of labor over which I have exercised control, together with results as far as they have been reached, which have been decisive enough to render conclusions of any value.

In this report I shall treat of the instruction given, the experiments, the work in horticulture and on the farm, and lastly the record in Meteorology.

I.—INSTRUCTION.

In this third year of the work in the Agricultural department, there were three daily recitations to conduct: the Freshman class of eight students, the Sophomore of three, and the Junior class of nine students. The work done in all classes was excellent, and would have done credit to students in any institution. In the winter term, by reason of sickness and other causes, the Sophomore class was abandoned, so that after February 1, there were only two recitations daily. In the spring term the Freshman class was reduced to four, but the Junior class remained intact through the year, with one exception. This class contained five Seniors, of whom one left and one graduated in the regular Agricultural course. Two were graduated in the Agricultural course in addition to the Scientific course, and one received a diploma in Agriculture. Thus four left the University with credit, having completed the Agricultural course. This marks an era in the history of Purdue University—the graduation of students in the industrial departments.

II.—EXPERIMENTS.

The experiments of the previous year have been carried on and others have been begun, as they were thought to be beneficial to the State or to the science of agriculture. The head of this department agreed with others to co-operate with the Department of Agriculture at Washington, D. C., in series of experiments in various lines.

The first experiment was the comparison of mineral and nitrogenous fertilizers. This was tried last year in conjunction with the Connecticut Experiment Station, and reports with corn and potatoes made to them. This year the experiment is continued with slight variations.

The season of 1882 has been a peculiar one. The month of March opened warm, but the weather was cold in the latter part of the month, and April was very cool and frosty. This had its effect on the spring planting, and especially on the small fruits on the Experimental ground. The month of May was also frosty and cold, there being six mornings on which there was white frost. The cold freezes of April caused the buds on the grapes to drop, and it was very late before they put out the second time. In the spring several new varieties were set, so that now our grounds contain the following:

Concord,	Wilder,	Elvira,
Merrimac,	Massasoit,	Agawam,
Brighton,	Isabella,	Lady,
Iona,	Lindley,	Goethe,
Delaware,	Prentiss,	Catawba,
Salem,	Ives's Seedling,	Moore's Early,
Hartford Prolific,	Martha,	Senasqua,
Worden's Seedling,	Early Champion,	Rebecca,
Croton,	Concord Chasselas,	Eumelau,
Triumph,	Vergennes,	Barry,
Highland,	Noah,	Pocklington,
Duchesse,	Lady Washington,	Jefferson.
Thirty-six varieties.		

On April 16, shortly after they were uncovered, the following observations were made in my note book:

"All the varieties living. Salem, very feeble; Croton, very weak; Lady, poor growth in 1881, not strong; Prentiss, wintered well, but not a strong growth in 1881; Catawba, not strong. The following look well, and have wintered in fine condition: Early Champion, Agawam, Elvira, Concord, Wilder, and Iona. There were several more nearly as good as these."

After the severe freezing weather in the latter part of April, an examination was made to see about the proportion of buds killed. The earlier varieties suffered most. "Early Champion, Merrimac and Brighton, nearly all the buds killed—new buds forming for future growth; Concord, buds three-fourths killed; Hartford, Moore's Early, Massasoit, Isabella, Catawba, Ives's Seedling, one-half killed; Agawam and Delaware, one-third killed; Elvira, one-fourth killed. Of those apparently uninjured we have Senasqua, Eumelan, Goethe, and Iona. Lady appears to have received very little injury." The Black Cap raspberries were all injured, but Gregg and the Mammoth Cluster did best, and in the order named. Of the red varieties the Herstine and the Turner did best, and Philadelphia next. The strawberries were well covered with straw mulch and were not uncovered until quite late. The consequence was, that the plants were not as early, and the blossoms received less injury from frost.

The following varieties were fruited this season:

Black Defiance,	Captain Jack,	Glendale,
Kentucky,	Sharpless,	Sterling,
Green Prolific,	Huddleston's Favorite,	Crescent,
Great American,	Cumberland Triumph,	Charles Downing,
Wilson's Albany,	Bidwell,	Windsor Chief,
Seth Boydon,	Sucker State,	Warren,
Longfellow. Nineteen varieties.		

In the judgment of several persons, the Black Defiance was the best berry for table raised on the grounds. The berries were large and luscious. Crescent was the most profuse bearer. Cumberland Triumph sustained its old reputation. In order of ripening, the Black Defiance began May 28, then Crescents, Capt. Jack, Warren, Windsor Chief, Charles Downing, Hud-

dleston's Favorite, Cumberland Triumph, Bidwell, Sucker State, and Longfellow. Glendale did very poorly, and berries were poor. Kentucky, few berries, but fine. Sterling, only a few berries, but only medium. Green Prolific, about one-third of a crop.

VARIETIES OF WHEAT.

The following varieties of wheat were sown on soil prepared as evenly as possible, and the same quantity of seed sown per acre. The following table shows the result with other data connected with their growth:

WHEAT—VARIETY.	Ratio of Cwt. Straw per Bushel.	Smooth or Bearded.	Height of Straw— Inches.	Stiffness of Straw— Scale 10.	Time of Ripening.	Character of Grain— Red, R.; White, W; Amber, A.	Bushels per Acre.	Straw—Cwt. per Acre.

* Error in threshing.

In order of yield the best five varieties were Sandomirka, 39.28 bushels; Arnold's Hybrid, 36.45; Thiess and Zimmerman, 35.35 each; Michigan Wick, 31.42. In order of stiffness of straw and standing up we have Shumaker, Sandomirka, Velvet Chaff, etc.

POTATOES.

Thirty-two varieties of potatoes were planted in rows, side by side, on equal areas of ground. The following table shows the result:

VARIETIES.	Bushels per Acre.	VARIETIES.	Bushels per Acre.
Compton's Surprise	51.47	Early Dexter	15.97
White Flesh	14.20	Early Queen	26.62
Early Vermont	8.87	Leader	30.17
Jersey Peach-blow	31.47	Little Giant	35.50
St. Patrick's	150.87	Strawberry Mercer	104.72
Trophy	62.12	College Seedling	62.12
Brigham's	83.42	Mammoth Pearl	225.42
Improved Peach-blow	111.82	Galva.	44.37
Climax	56.80	Rose, Magnum Bonum	81.65
Lilly No. 1	97.07	White Elephant	131.35
Whipple's Seedling	53.25	Beauty of Hebron	67.45
Early Ohio	79.87	Washington	39.05
Prolific	37.27	College Seedling No. 1	10.65
Genesee County King	39.05	Dr. Brenonian	8.87
Ruby	23.07	Early Samaritan	35.50
Snowflake	156.20	Lilly No. 10	92.30

The seedlings of last year which did so finely were planted, and the result was hardly as good as might have been expected from last year's growth, the proportion of small potatoes being considerably increased.

CORN.

The corn plat "C," has now been in crop for three years in succession without manure or fertilizer of any kind. I have prepared a table in which the results of the three years are placed side by side for comparison. It will be interesting to compare the yearly yield of the same small plats in successive seasons, as well as to compare the yield of different plats in the same season.

In each case the whole eighteen plats have been plowed, harrowed, and planted in a single day; and each subsequent operation has been performed upon the whole of plat "C."

The evenness of the soil is very strongly shown by the yields of corn in 1881, when several plats did not vary more than two to five pounds on an area of one-sixteenth acre.

YIELD OF PLAT C—NO FERTILIZERS.

Experiment with Corn.

18	38.17	28.57	44.57	19.20	18.40

It is early to show comparative results, but as many persons think the results of a season, or at most two seasons, are suffi-

† The stalks were so brittle and wasted so badly, that only an average of the yield was taken. It was at the rate of 18.76 cwt. per acre.

* Sections No. 1, 2, 3, 4, 5 and 6, in this year, were averaged in pairs, hence the equal results.

cient to establish a deduction, the above table may, by its seemingly discordant results in three years, show somewhat clearly greater variations than those produced in some single seasons with fertilizers, and by this means the farmers of the State may be cautioned against hasty conclusions based on insufficient data. For full particulars of this experiment I refer you to Reports of 1880 and 1881.

PLAT D—WHEAT.

In 1881 wheat was harvested from this plat. The different sections had been treated precisely alike. In the fall of that year the plat was again sown to wheat, having been treated alike in all its sections, except that the quantity of seed per acre was varied as follows: Sections 15, 16, 17, and 18 received seed at the rate of 56 pounds per acre. Sections 11, 12, 13, and 14 received seed at the rate of 68 pounds per acre. Sections 7, 8, 9, and 10 received 79 pounds per acre. Sections 3, 4, 5, and 6 received 88 pounds per acre. Sections 1 and 2 were sown in drills 16 inches apart, by closing each alternate aperture in the grain drill, and seed at the rate of 48 pounds per acre was sown.

The results as compared with the yield, when the same quantity of seed was sown, in 1880, are given in the table below:

PLAT D—WHEAT.

SECTION NUMBER.	SEED, LBS. PER ACRE.		WHEAT, BUSHELS PER ACRE.		STRAW, CWT. PER ACRE.		RATIO OF STRAW PER CWT. TO BUSHEL OF WHEAT.

PLAT E—CORN.

This plat, after having corn raised without fertilizers in 1880, was devoted to the test of mineral and nitrogenous fertilizers in 1881-2.

The result in 1881 was published in the last annual report. In the table below the results of the three years are compared.

PLAT E—CORN.

Section No.	CORN, BUSHELS PER ACRE.			STALKS, CWT. PER ACRE.		
	1880.	1881.	1882.	1880.	1881.	1882.
1	46.51	35.87	72.00	*18.76	19.20	42.00
2	37.61	36.34	66.66	19.20	44.00
3	32.30	34.51	66.66	18.08	36.00
4	32.97	33.60	69.33	17.60	38.00
5	33.31	34.51	73.33	18.40	40.00
6	31.26	34.51	72.00	18.88	41.00
7	30.34	37.26	80.00	18.40	48.00
8	34.34	32.46	70.66	17.60	41.00
9	32.51	33.11	72.00	20.80	42.00
10	35.83	33.37	72.00	21.60	42.00
11	49.37	36.11	80.00	23.20	46.00
12	44.91	38.40	84.00	24.00	50.00
13	47.6	34.06	85.33	23.20	49.00
14	44.69	25.66	77.33	23.20	42.00
15	42.91	34.06	70.66	22.40	46.00
16	40.91	34.51	80.00	24.00	52.00
17	41.54	33.37	74.66	24.80	52.00
18	38.30	33.37	82.66	24.00	44.00
Average.	38.70	34.72	74.95	18.76	21.03	44.16

The fertilizers applied were as follows, and the amounts in 1881 and 1882 nearly the same.

The table formulates this, and also shows the yield of potatoes in 1881 and 1882.

*Only an average could be taken that year, on account of brittleness and wastage.

Section No.	VARIETIES OF FERTILIZER USED.	FERTILIZER, POUNDS, PER ACRE.		POTATOES, BUSHELS, PER ACRE.

0	No fertilizer	12.08	42.66
00	No fertilizer	11.70	35.20

* Called below "Mixed minerals."

More difficulty was experienced in experimenting with the potatoes than with corn. The ravages of the potato beetle, the prolonged drought and poor seed, all conspired to give an uneven stand and thus to tend to vitiate the results and make them somewhat unreliable.

There are three rotations of crops being tried on the experimental grounds, but as these are to continue over periods of five, six, and seven years, it is too early to publish any results.

On plot H were set apart several double sections, containing one-eighth acre each, on each of which was to be raised some particular crop without fertilizer. The result for three years is embodied in the following table:

Special Crops Without Fertilizer.

VARIETY OF CROP.	YIELD, BUSH. PER ACRE.			STALKS OR STRAW, CWT. PER ACRE.		
	1880.	1881.	1882.	1880.	1881.	1882.
Corn	36.29	21.15	†
Oats	3.50	38.00	36.87	22.00	12.28	19.00
Barley	2.60	14.84	‡	19.56	9.68
Potatoes	37.07	12.25	36.26
Buckwheat	6.93	*	¶	17.70	*	¶
Wheat

GRASSES.

The plats of grasses and clovers were many of them destroyed by the building of the new Agricultural Hall. The plats of Alsike clover, Orchard grass, Alfalfa or Lucerne, and Meadow Foxtail were not disturbed, and all but the Alsike are doing well. The Alfalfa has made one cut of grass, and is now ready for a second one (July 12). The *Poa. nemoralis*, or wood meadow grass, also did well. Other plats will probably be laid out so that the comparative growth can be noted from year to year.

* Killed by drought.

† Seed poor, and hence failed to grow.

‡ Injured by rain.

¶ Not sown.

FARM EXPERIMENTS.

The following experiments were tried on field crops, oats and grass with super-phosphate manufactured in Philadelphia :

I.—Oats.

Five plats were arranged as in annexed diagram, and the fertilizer used as indicated.

These plats were of unequal area on account of the highway, which borders on the north side of the field. The plats were all of the same width (two rods) and the fertilizer was sown with drill at the rate of 170 pounds per acre.

The results were as follows :

Oats.

Plat No.	Fertilizer, lbs., Per Acre.	Weight of Oats, lbs.	Oats, bu. Per Acre.	Straw, cwt. Per Acre.	Ratio of Straw, per bu. grain.
1.	00	645	33.59	11.41	0.33
2.	170	505	27.44	8.60	0.31
3.	00	375	21.30	9.72	0.45
4.	170	380	22.61	10.00	0.44
5.	00	375	23.43	10.10	0.43

Average yield of grain, fertilized plats, per acre 25.02 bu.
 Average yield of grain, unfertilized plats, per acre 26.10 bu.
 Loss, per acre 1.08 bu.

Average straw, fertilized plats, per acre	9.30 cwt.
Average straw, unfertilized plats, per acre	10.41 cwt.
Loss, per acre	1.11 cwt.

Deductions: That fertilizer in this season produced a loss equal to 1.08 bushels per acre of grain, and a loss of 1.11 cwt. straw per acre.

II.—Super-phosphate on Meadow or Grass.

Fertilizer was sown on plats as designated in diagram, on April 2, 1882, at the rate of 200 pounds per acre, and the result is tabulated below:

Grass Plats.

1	2	3	4	5
Grass.	Grass Phosphate.	Grass.	Grass Phosphate.	Grass.

Fertilizer on Meadow.

Plat No.	Fertilizer per Acre.	When Cut.	When Weighed.	Hay—lbs.	Hay—lbs. per Acre.
1.	July 29	August 8	1,905	3,810
2.	200	July 29	August 8	1,860	3,720
3.	July 29	August 8	1,685	3,370
4.	200	July 29	August 8	2,210	4,420

Average hay, lbs., on fertilized plats	2,035
Average hay, lbs., on unfertilized plats	1,795

This shows a gain of 240 lbs. per acre for use of fertilizer. The meadow was of timothy grass and only a very slight stand of red clover.

Experiments with Ground Limestone.

Some of this fertilizer having been sent the University from Bloomington, Ind., with the request that it be tested, plats were laid on oats and meadow, as follows:

Oats.	Oats— Ground Limestone.	Oats.	Grass.	Grass— Ground Limestone.	Grass.
-------	-------------------------------	-------	--------	--------------------------------	--------

Each of these plats was two rods in width and had an area of one-half acre.

The results of this experiment are as follows:

Average yield of oats on unfertilized plats, per acre	19.33 bu.
Straw, per acre.	10.88 cwt.
Average yield of oats on fertilized plats, per acre	25.84 bu.
Straw, per acre.	8.34 cwt.

This shows a gain for the fertilized plat of 6.51 bu. per acre and a loss of 2.54 cwt. of straw per acre.

Grass.

Average yield of grass on unfertilized plats, per acre	37.54 cwt.
Yield of fertilized plat, per acre	34.80 cwt.

This shows a loss of 2.74 cwt. per acre.

Experiments with Sorghum.

The attention of sugar makers and refiners having been drawn quite strongly during 1881 to the fact that a large quantity of good, crystalized sugar could be made, and as several varieties of the sorghum or sugar-cane had been and were being tested in different States and localities, I procured seeds of seventeen varieties of sorghum, and these were planted, about May 15, in a field with corn, so as to prevent their mixing or cross-fertilizing each other. Professor Wiley, of the De-

partment of Chemistry, kindly offered to make the sugar determinations and report the same. They have made fine growth at this date, and everything gives promise of interesting results.

Miscellaneous.

During the last year several new varieties of different things have been tried. In 1881 an ounce of Blount's Prolific corn was planted and produced 35 lbs., or one-half bushel, of ears. This furnished seed enough to plant one large plat, C, of 180 square rods.

The Black Mexican sweet corn was tried and was found to be excellent. Some seed of Egyptian early sweet corn, sent from Washington, D. C., was tried, and produced very fine samples of early garden corn. It was sweet and very tender. The Dourra, or Egyptian rice corn, was tried a second time, as a forage plant, and showed that it had remarkable qualities to withstand drought. It remained green when all else was dried up. The seeds are excellent food for poultry. None was planted this year.

* Probably mixed in grinding.

† Weights lost.

III.—HORTICULTURE.

The work in Horticulture is in part included in the instruction and in part in the experiments, as the small fruits are all grown experimentally on the grounds devoted to that purpose. The orchard suffered severely with the winter of 1880 and 1881; but few of the trees were killed, however, until the prolonged drought of the following summer gave them a still stronger test. This Spring (1882) it was found that about fifteen trees were entirely dead and several more were leaving out but feebly.

The dead trees were taken out, and the orchard has been treated to keep off the borers, and the ravages of the tent caterpillar checked. The early frosts have nearly destroyed the fruit prospect for this year. The nursery has been attended to, and the trees are in many instances grown too large to transplant.

Mr. E. Y. Teas presented the University with over 1,000 young Catalpas from his nursery at Dunreith, Indiana, and these, after being hilled in during the winter, were in part planted in a cornfield on the west margin of the farm as a practical start in Forestry. The remainder have been placed in the nursery rows here for one more years' growth, when they will be placed out in the same way in another field. Those planted out have all lived and are growing finely. They are put in rows, and are cultivated as often and as much as the corn in the same field. The evergreens and other trees have made fine growth during the past two years, and the time has now arrived when the campus of Purdue University will change more in appearance from the growth of trees than at any period in its previous history. A few vacant places have been filled.

THE GREENHOUSE.

The addition put up for propagating purposes in the Fall of 1881, has proved a valuable addition to the greenhouse in many ways, and the increased propagation, together with the increased sales, both attest the wisdom of the act. Early in

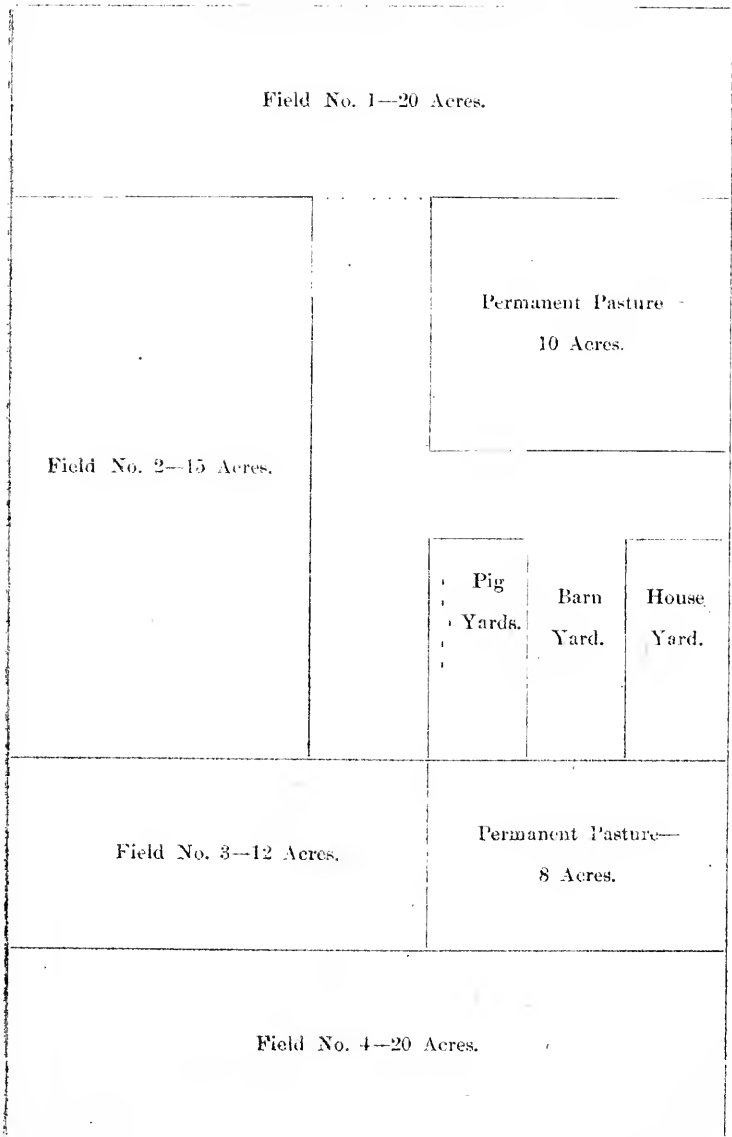

March, Mr. G. W. Vestal left the University, and Mr. R. Elliot was selected to fill the place of Florist and Horticulturist. Mr. Vestal, who was an able man, has been succeeded by one who is fully as capable, and the showing which the greenhouse makes in the appearance of the plants, in the sales and in the plants used for ornamental purposes about our lawns, is one of which Mr. Elliot may well be proud, as certainly are the friends of the University.

IV.—FARM REPORT.

By resolution of the Board of Trustees, I assumed the management of the farm on March 1, 1882, and the title of Farm Superintendent. The farm seemed to be without definite plan for its future work, and at an early day the following plan was outlined for a systematic rotation of crops and farm management. There were about thirty-two acres of wheat on the ground and about three acres of corn unhusked in the field. The time of the men was first directed to hauling coal for the University; at a later day to getting in spring crops.

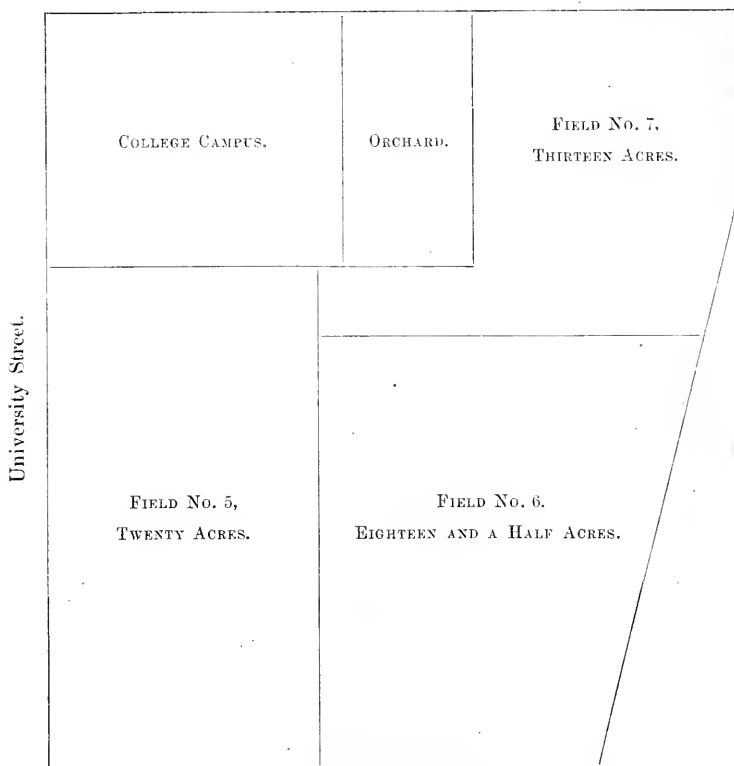

The farm has been divided into fields, and these numbered as follows, for convenience in description and reference.

The plan toward which the work has been directed, together with the annexed diagram, will make all plain:

Farm Fields.

Street—Farm Front.

The foregoing diagram contains the 100 acres on the south side of the highway. The one below, shows the fields on the north side, and lying farther east, toward town :

The rotation adopted has seven crops or in familiar terms is called a 7 course rotation. It is as follows:

- | | | | |
|---------|----------|----------|----------|
| 1 Corn, | 3 Oats, | 5 Wheat, | 7 Grass, |
| 2 Corn, | 4 Wheat, | 6 Grass. | |

This is supposed to begin with a grass sward, either meadow or pasture, as circumstances may control. Corn two years, gives two years of cultivation to the soil, and the manure should be applied in these two years. Then oats to be followed by wheat, sown the same Fall. This crop of wheat to be followed by another, when the ground should be worked so smooth by three sowed crops as to give a nice level bed for

meadow. Seed with timothy or blue-grass and clover. Mow one year and pasture the next; or mow two years and pasture till the time to plough for corn at the beginning of the rotation. The following scheme will show the cropping for the past year and the arrangement to and including 1886, when all the fields will be brought into the regular system and in their regular order.

This system and arrangement will give about one-third the farm in oats and meadow and one-third each in corn and wheat, with twenty-two acres laid down in permanent blue-grass pastures, close to the yards, where there are sheds for shade and tanks with fresh water supplied by wind mill and tank system.

ROTATION SCHEME.

Field No.	1881.	1882.	1883.	1884.	1885.	1886.	1887.
1	Wheat.	Corn.	Corn.	Oats.	Wheat.	*Wheat.	Grass.
2	Wheat.	Grass.	Corn.	Corn.	Oats.	Wheat.	Wheat.
3	Wheat.	Wheat.	Corn.	Corn.	Oats.	Wheat.	Wheat.
4	Grass.	Grass.	Grass.	Grass.	Corn.	Corn.	Oats.
5	Wheat.	Corn.	Oats.	Grass.	Grass.	Corn.	Corn.
6	Corn.	Oats.	Wheat.	Grass.	Grass.	Grass.	Corn.
7	Corn.	Oats.	Wheat.	Wheat.	Grass.	Grass.	Grass.

Yields.

Field No. 1—Corn, 894 bushels.

Field No. 2—Meadow, 30 tons hay.

Field No. 3—Wheat, 438.50 bushels, or 22.48 bushels per acre.

Field No. 4—Pasture.

Field No. 5—Corn and cane, 105 tons of cane, 696 bushels of corn.

Field No. 6 and field No 7—Together in oats; 833 bushels of oats, or at the rate of 28.75 bushels per acre.

In submitting this section of my report, I feel that so little has been accomplished where so much has been planned that it may appear premature to submit any report at all.

*The first year when the cropping will be regular and according to the original plan.

Realizing that what the people of the State want is facts, I have presented the section for whatever of good or profit may come of it.

V.—METEOROLOGY.

The work in this branch has been carried steadily forward, and as, when this report is published, three years of observations will nearly have been completed, some comparison may be made of the results during this period of time. The young men of the Junior class have taken the work cheerfully, and have done its duties well; they deserve especial credit. On January 1, the department began submitting regular monthly reports to the War Department Signal Office, at Washington, D. C. At the same time we began to co-operate with the Indiana Weather Service, J. B. Connor, Chief, and have also sent that department at Indianapolis our regular monthly report. The making of these reports involves a large amount of pains-taking labor, and requires three copies of each observation after the original entry. The interest in the work, and the results reached by this branch, are of increasing interest to those connected with the University and others.

SUMMARY.

Interesting Data for each Month.

DECEMBER, 1881.

Highest barometer 30.663 inches December 4.
 Lowest barometer 29.716 inches December 28.
 Highest thermometer 62° December 1.
 Lowest thermometer 12° December 30.
 Range of temperature 50°

Rain fell on the 1st, 11th, 12th, 13th, 20th, 22d and 27th—in all 7 days.
 Prevailing winds, S. and S. W.

JANUARY, 1882.

Highest barometer	30.736 inches	January 23.
Lowest barometer	29.640 inches	January 26.
Highest thermometer	59°	January 26.
Lowest thermometer	1°	January 17.
Range of temperature	58°	

Rain fell on the 4th, 8th, 13th, 15th, 25th and 26th—in all 6 days.

Prevailing winds, S. W.

FEBRUARY, 1882.

Highest barometer	30.579 inches	February 24.
Lowest barometer	29.359 inches	February 28.
Highest thermometer	59°	February 28.
Lowest thermometer	13°	February 22.
Range of temperature	46°	

Rain fell on the 16th, 19th, 20th, 21st, 23d, 26th and 28th—in all 7 days.

Prevailing winds, S.

MARCH, 1882.

Highest barometer	30.614 inches	March 7.
Lowest barometer	29.369 inches	March 1.
Highest thermometer	67°	March 29.
Lowest thermometer	22°	March 13 and 14.
Range of temperature	45°	

Rain and snow fell on the 4th, 9th, 14th, 17th, 20th, 21st and 26th—in all 7 days.

Prevailing winds, S. and S. W.

APRIL, 1882.

Highest barometer	30.338 inches	April 24.
Lowest barometer	29.459 inches	April 19.
Highest thermometer	79°	April 3.
Lowest thermometer	25°	April 11.
Range of temperature	54°	

Rain fell on the 2d, 6th, 9th, 10th, 19th, 23d and 26th—in all 7 days.

Prevailing winds, N. E. and S. W.

MAY, 1882.

Highest barometer	30.430 inches	May 18.
Lowest barometer	29.562 inches	May 10.
Highest thermometer	81°	May 8.
Lowest thermometer	34°	May 2.
Range of temperature	47°	

Rain fell on the 1st, 3d, 5th, 6th, 8th, 9th, 10th, 11th, 13th, 14th, 21st, 25th, 27th, 28th and 31st—in all 15 days.

Prevailing winds, N. E. and S. W.

JUNE, 1882.

Highest barometer . . . 30.204 inches . . . June 20.

Lowest barometer . . . 29.573 inches . . . June 3.

Highest thermometer . . . 95° . . . June 20.

Lowest thermometer . . . 41° . . . June 1.

Range of temperature. . . . 54°

Rain fell on the 2d, 9th, 10th, 11th, 13th, 14th, 16th, 18th, 21st, 25th, 26th, 28th and 30th—in all 13 days.

Prevailing wind, S. W.

JULY, 1882.

Highest barometer . . . 30.371 inches . . . July 22.

Lowest barometer . . . 29.902 inches . . . July 1.

Highest thermometer . . . 91° . . . July 27.

Lowest thermometer . . . 50° . . . July 22.

Range of temperature. . . . 41°

Rain fell on the 1st, 3d, 8th, 10th, 13th, 16th, 27th and 31st—in all 8 days.

Prevailing wind, S. W.

AUGUST, 1882.

Highest barometer . . . 30.328 inches . . . August 20.

Lowest barometer . . . 29.800 inches . . . August 8.

Highest thermometer . . . 87° . . . August 22.

Lowest thermometer . . . 49° . . . August 12.

Range of temperature. . . . 38°

Rain fell on the 1st, 2d, 3d, 8th, 9th, 15th, 23d, 24th, 25th, 26th, 27th and 29th—in all 12 days.

Prevailing winds, S. W., S. and N. W.

SEPTEMBER, 1882.

Highest barometer . . . 30.427 inches . . . September 26.

Lowest barometer . . . 29.893 inches . . . September 13.

Highest thermometer . . . 87° . . . September 18.

Lowest thermometer . . . 35° . . . September 24.

Range of temperature. . . . 52°

Rain fell on the 19th, and 29th—in very small quantity.

Prevailing winds, S., N. E. and W.

OCTOBER, 1882.

Highest barometer . . . 30.341 inches . . . October 5.

Lowest barometer . . . 29.708 inches . . . October 30.

Highest thermometer . . . 78° . . . October 5.

Lowest thermometer . . . 30° . . . October 20.

Range of temperature. . . . 48°

Rain fell on the 2d, 3d, 8th, 10th, 13th, 16th, 27th and 28th—in all 8 days.

Prevailing winds, S., S. E. and N. E.

NOVEMBER, 1882.

Highest barometer . . . 30.551 inches . . . November 2.
 Lowest barometer . . . 29.916 inches . . . November 23.
 Highest thermometer . . . 71° . . . November 11.
 Lowest thermometer . . . 9° . . . November 27.
 Range of temperature . . . 62°

Rain or snow fell on the 1st, 5th, 9th, 10th, 12th, 17th and 26th—in all 7 days.

Prevailing winds, S. W., W. and S.

There were six frosts, and 5 $\frac{3}{4}$ inches of snow fell during the month.

The year has been chiefly remarkable for a mild winter, a cool and very wet summer, and a dry September.

Daily observations have been taken for three years, and some interesting comparisons are given in the following table:

YEARS.	Highest Temperature.	Lowest Temperature.	Average Temperature.	Range of Temperature.	Lowest Temperature of May.	Lowest Temperature of September.	Wettest Month.	Dryest Month.	No. of Rainy Days, May 1 to August 31.	Rainfall, May 1 to August 31.	Annual Rainfall.	Average Humidity.	Wind, Miles Traveled.
1880. . .	99	-18	54.74	117	32	30	June	Oct.	32	18.15	43.08	.713	61,151
1881. . .	107	-23	50.95	130	37	45	June	Jan.	20	13.50	41.90	.745	66,649
1882. . .	95	1	51.50	94	34	35	June	Sept.	48	25.83	50.03	.800	67,230

In the above table the year 1882 is superlative as to number of rainy days and rainfall in the actively growing season, the total rainfall, per cent of humidity, and windiness.

Respectfully submitted,

C. L. INGERSOLL,

Professor of Agriculture and Horticulture.

SUPPLEMENTARY REPORT OF THE AGRICULTURAL DEPARTMENT.

President E. E. White, LL. D.:

DEAR SIR—As successor to Prof. C. L. Ingersoll, I herewith submit a brief statement of the work, condition, and needs of the department since I assumed control on the 21st of last August. I also submit some plans and suggestions with reference to future work and improvements.

EXPERIMENTS.

The experimental work of the department has been carried forward in accordance with the plans projected by Prof. Ingersoll. It will be the aim of the department to continue every experiment begun, until satisfactory results can be reached. And, as far as means and facilities will permit, the department is desirous to conduct such other field and feeding experiments as will further the interests of Agriculture in the State.

THE AGRICULTURAL BUILDING AND GROUNDS.

The work of grading around the Agricultural building is nearly completed. A gravel walk and drives have been built, and the grounds in the immediate vicinity of the building will be seeded to lawn grasses in the spring.

The Agricultural building is an invaluable aid in the carrying forward of exact experiments.

The office, seed room, and museum, are yet to be properly furnished with suitable cases and shelves. This will receive attention soon.

THE FARM.

In order to show the stock and field products on the farm last Spring, I abstract from Professor Ingersoll's inventory of March 1, 1882:

Horses.—Three Clydesdale mares, one half-blood Percheron mare, and one common mare.

Cattle, Jerseys.—One bull, one cow and one calf. Grades: One half Jersey heifer, and one three-quarters Jersey heifer.

Swine.—Thirty-five head, including fifteen small pigs.

The farm products then on hand were:

Corn in crib	5 bu.
Corn in field	90 bu.
Oats	10 bu.
* Hay	21 tons.
Hungarian grass	$\frac{1}{2}$ ton.

A few sheaf oats and some rye straw.

The small amount of grain on hand necessitated the purchase of more, which considerably increased the farm expenses.

THE STOCK.

When I succeeded Prof. Ingersoll the stock of the farm consisted of:

Horses.—One Clydesdale mare, one half-blood Percheron mare, and two common mares.

Jerseys.—One bull, one cow and one calf. Grades: One half Jersey cow, one three-fourths Jersey heifer, and a three-fourths Jersey calf.

Swine.—Twenty-four head, large and small.

CROPS AND PASTURE.

The farm products of the year are given below, and their values, estimated at current prices:

	<i>Amount.</i>	<i>Value.</i>
Wheat.....	638 bu.,	\$574 20
Corn.....	1,590 bu.,	636 00
Oats.....	833 bu.,	295 55
Potatoes.....	20 bu.,	10 00
Sorghum seed†.....	150 bu.,	40 00
Sorghum leaves.....	5 tons,	25 00
Sorghum.....	105 tons,	262 50
Corn fodder.....	30 tons,	100 00
Timothy hay	30 tons,	360 00
Clover (poor).....	15 tons,	75 00
Straw	55 tons,	25 00
Pastureage		125 00
Total.....		\$2,528 25

*Mostly clover of poor quality.

†The amounts of cane seed, corn fodder, and straw are estimated.

CONDITION OF THE FARM.

Soil.—Most of the land is in fair, but not high condition. The field lying north and east of the orchard is badly “run.” The fields are quite foul and active measures will be necessary to subdue the weeds.

Fences.—Many of the fences are getting old and insufficient to protect the crops from the cattle and swine of the highway. One field suffered slightly from the incursions of swine this year.

Buildings.—Some of the buildings have been neglected and, as a result, considerable repairs are necessary. Needed repairs are now receiving attention.

The piggery is too small, the arrangement very defective and the location bad.

The tool shelter is insufficient and very inconvenient.

The storage room for grains is hardly sufficient. This can be easily remedied by putting bins on the west side of the barn floor.

The inside arrangement of the barn is very inconvenient, as it involves too much handling of the coarse feeds. Some not very expensive modifications would make a very great improvement.

The basement of the barn is not well arranged for keeping cattle.

There is no floor in the basement except a very imperfect one under the horses. As a result, valuable elements of fertility are wasted and the health of the animals endangered.

FARM IMPLEMENTS, ETC.

The implements of the farm, available for service, consist of one chilled and two steel plows, one shovel plow, two wheel cultivators, two double shovel plows, two light harrows, two grain drills, two lumber wagons, one horse-rake, one roller, one fanning mill, and an Osborne self-binder.

Most of the above tools are in fair working order at present, but some repairs will soon be needed.

NEEDS.

The needs of the farm may be briefly summed up as follows: One good horse, suitable for general farm work, an increase

in the stock, a mowing machine, two heavy harrows, a power feed-cutter, and some repairs on the fences.

RECOMMENDATIONS.

Attention is respectfully invited to the following recommendations:

First. I would advise a gradual increase in the number of cattle, until the fullest capacity of the farm is reached. Animals of fair, but not fancy pedigrees, and of first-class milking qualities, will, doubtless, prove most profitable.

Second. I would recommend the purchasing of a pair of registered Poland-China pigs, not related, of compact form, and medium growth.

Third. I would urge the removal of the piggery from its present low site, and an enlargement of the same.

Fourth. I would recommend, further, the laying of a floor, bedded in grout, in the barn basement, and the erection of suitable cattle stalls.

Fifth. I would also recommend a six-course rotation, consisting of corn, corn, oats, wheat, grass, grass, and such changes in the arrangement of fields as the above rotation would involve.

Sixth. I would suggest the desirability of a small silo for the supplying of green food in time of drought and during the winter months.

ACKNOWLEDGEMENTS.

My acknowledgements are due to Professor Ingersoll, for the careful manner in which he outlined those parts of his report necessarily left incomplete at the time of his resignation; to Mr. Hackstaff, for efficient aid in the experimental work; and to Mr. Walter S. Ratliff, a Senior student in Agriculture, for valuable services in taking and tabulating the meteorological observations.

Respectfully submitted,

W. C. LATTA,

Instructor in Agriculture, and Farm Superintendent.

DEPARTMENT OF PRACTICAL MECHANICS.

To the President of Purdue University:

I take pleasure in presenting my second biennial report of the Mechanical Department of Purdue University.

Since the people of Indiana know little or nothing of the extent and importance, or even of the character, of the work of the department, I have added to my usual statement of the progress and present condition of the school, a second part, containing a report on our system of instruction, with full details of the class work in the shops.

The special school of Practical Mechanics was opened in the fall of 1879, and is therefore only just entering upon the fourth year. Though the work at Purdue, guided by the experience of other technical schools, has always been effective, still the first two years were of necessity, to a great extent, experimental. Local requirements necessitated modifications of detail, questions as to the division of time between different branches of the course had to be settled, and the special direction to be taken by the work could not at first be satisfactorily determined. To compensate, however, for these hindrances at the start, we have now a systematic course of instruction which, though still defective, is arranged after careful study, and observation to meet the needs of this State. The people of Indiana, let us hope, will appreciate the advantages offered by this department of Purdue, and will give their sons an opportunity to become familiar with those underlying principles of practical mechanics upon which success in the everyday work of life must, in the future, so greatly depend.

PART FIRST.

IMPROVEMENTS AND APPLIANCES.

The workshops of the department, which are still located in the basement of the Laboratory, have been materially improved by enlarging the windows and by repainting.

The important appliances added are as follows: In 1880-81 five sets of carpenters' tools, four wood turning lathes, and a Fay scroll saw; in 1881-82, one small machine lathe, one speed lathe, three iron working vises with tools for the same, three sets of carpenters' tools, and a circular sawing machine.* For a more complete understanding of the extent and arrangement of the equipment, see plan of the shops, page 105, which the following explanation will make clear:

EXPLANATION OF PLAN.

"A," is the main shop for wood and iron work; "B" and "C," are forge shops; "D," a storage room for lumber; and "E," is used as a molding room, and also as a storage room for acids by the Chemical Department.

In the main shop "A," No. 1 is a shaft running in a tunnel between engine house and shop; the pulleys, Nos. 2 and 3 distribute the power from this shaft to the line shafts (not shown), by which all of the machinery is driven; No. 4, Instructor's table; No. 5, wood working benches; No. 6, vises for benches; No. 7, cabinet for miscellaneous wood working tools and supplies; No. 8, bench for completed wood work; No. 9, circular sawing machine; No. 10, scroll saw; No. 11, fret saw; No. 12, four wood turning bench lathes, 3-foot bed; No. 13, bench and tool cabinet for lathes; No. 14, wood turning lathe, 9-foot bed; No. 15, cabinet for lathe; No. 16, two iron working benches with drawers for tools; No. 17, eight iron working vises; No.

* Although the additions of the summer just passed (1882) are not included in this report, I will state that a large machine lathe, a set of Bett's standard gauges, from $\frac{1}{4}$ to $2\frac{1}{2}$ inches, and other measuring appliances, together with a number of miscellaneous tools, were then purchased.

Plan of the Shops.

18, two machine lathes, 6-foot bed; No. 19, machine lathe, 3½-foot bed; No. 20, speed lathe; No. 21, machine planer; No. 22, vertical drilling machine; No. 23, emory grinder; No. 24, grindstone; No. 25, polishing head; No. 26, cabinet for measuring appliances; No. 27, cabinet for chucks, drills, etc.; No. 28, closet for small supplies; No. 29, closets for students' clothes; No. 30, sink, with conveniences for washing; No. 31, blower for furnishing blast to forges.

In forge shops "B" and "C," No. 32, four wrought iron forges, each provided with coal and water tanks; No. 33, portable forge; No. 34, anvils; No. 35, tool stands; No. 36, case for completed work; No. 37, bench; No. 38, vise.

In storage room "D," No. 39, bench; No. 40, racks for lumber.

In molding room "E," No. 41, a large receptacle for sand; No. 42, movable boards upon which the students work; No. 43, bench taken by Chemical Department; No. 44, is a closet for the storage of paints and oils; No. 45, stairs to floor above; No. 46, entrance steps.

REGULAR CLASS WORK IN THE SHOPS.

After re-arranging the order of the different branches of the shop work, the Fall and Winter terms of 1880-81 were devoted alike by the Freshmen and Sophomores to bench work in wood, wood turning, and pattern making; the third was spent by the Freshmen in vise work in iron, and by the Sophomores in machine work. Since the beginning of the year 1881-82, the classes have taken up the work in regular order, which is as follows:

Freshman Year.

Bench work in wood	12 weeks.
Machine work in wood	4 weeks.
Pattern making (including molding).....	12 weeks.
Vise work in iron.....	10 weeks.
Total.....	<u>38 weeks.</u>

Sophomore Year.

Iron forging.....	14 weeks.
Steel forging.....	4 weeks.
Machine work in iron.....	20 weeks.
Total.....	<u>38 weeks.</u>

The above arrangement divides the time between the different branches in proportion to the value of the work, and the difficulty with which it is acquired; it appears to be all that can be desired. The work of students under it has been of excellent quality, and is sufficiently extensive to accomplish the object of the course.

In machine work, some inconvenience has been experienced, owing to a lack of proper appliances, but as some of the deficiencies have now been made good, there can be but little trouble during the present year. As a whole, the work has been very satisfactory.

SUPPLEMENTARY INSTRUCTION.

At the beginning of the school year, 1881-82, the course in Mechanics was enlarged by the introduction of what is called a Supplementary Course of Instruction, and also by extending the course in Mechanical Drawing. The nature and object of the former will be set forth in another part of this report (page 115), and I need only add here that its success has been very gratifying. The latter will be reported by the Industrial Art Department.

AGRICULTURAL MECHANICS.

As is given in the annual Register, the two lower classes in Agriculture take an abbreviated course in shop work. They devote one hour each day to it during the twelve weeks of the middle term. On account of the short exercises, the work has not been as good as I desire it to be, though in some cases marked success has been attained; whether or not a shop exercise of one hour duration will, in general practice, prove profitable is a question which I am not fully prepared to answer. I feel confident, however, that where there is an earnest desire to succeed on the part of the students, good work results, but, without it, nothing approaching satisfaction can be obtained.

SPECIAL STUDENTS.

Students coming under this head are those who enter the shops with the view of taking some one or more selected branch without pursuing the whole course.

They are admitted upon application whenever room and instruction can be given them, and generally do not enter regular classes, but come in sufficient numbers to form a class by themselves; bench work and wood turning are the branches principally chosen. The advisability of admitting such students to take a little of this or that, is a serious question, since too frequently it is indulging whims which can not amount to much, because of the incompleteness of the work. Where the work covers considerable ground and extends through one or more whole terms this objection does not apply.

Among the special students a number of young ladies have come, who have donned their ample wrappers and entered upon their work with as much enthusiasm as their stronger companions. They have done the same work as the young men, and though progressing much slower, have been nearly as successful.

The above remarks do not apply to students who are in the *Special School of Mechanics*. Such students in the shop enter regular classes, and so far as their work there is concerned, are considered regular.

NUMBER OF STUDENTS.

The total number of students to whom instruction was given during the first year of the department's work (1879-80), was 5—all were regular; the second year (1880-81), 24, of whom 8 were regular, 8 were agricultural mechanics, and 8 were specials; and the third year (1881-82), 30, of whom 9 were regular, 9 were agricultural mechanics, and 12 were specials. The present Freshman class completely fills the shops, there being at the time of writing not a single place vacant. I consider this a favorable showing.

OUTSIDE WORK.

The above term is applied to all work carried on by students in the shops outside of their class hours, and for which they receive compensation. As an educator, by affording additional practice, it gives increased skill, and consequently forms a valuable adjunct to the class work. Among the students, many depend upon it, as the compensation they receive enables them

to reduce considerably the amount of ready money necessary for a year's schooling, and to the Institution it is self-sustaining, the prices paid to the students making the cost of their work about equal to what it would cost if done by skilled labor. The quality of the work is always good, since nothing is attempted that can not be successfully carried out. The schedule of prices adopted at the end of last year is meeting the requirements much better than the previous arrangement.

The varied nature of this work will not admit of a detailed account. I shall, therefore, only speak of a few results which, though forming but a small fraction of the whole, will be sufficient to illustrate its range.

Carriage Sheds.—The building, which was completed in the spring of 1881, is $18\frac{1}{2} \times 38$ feet, and is divided by double board partitions into five stalls, each of which is 7×18 feet in the clear. All joints are carefully framed together and its construction throughout is of a secure and substantial character. The ornamental headpiece surmounting the shingle roof, with the semi-circular arched openings of the front, give to the whole a neat and attractive appearance.

Models for the Industrial Art Department.—These comprise a set of thirty-six models, consisting of cubes, half, quarter, and eighth cubes, pyramids, cones, cylinders, etc., the principal dimensions of all being sixteen inches. Fifty T-squares and fifty drawing boards have also been made.

Tables for the Museum.—These, four in number, are thirty-two inches wide, and ten feet long. The frames and tops are of ash and the legs of turned maple. They are used to display work of the Mechanical department upon, and, as an example of students' work, have attracted considerable attention.

Lantern Box and Slides for the Natural History Department.—The lantern box is of walnut, and is used in connection with an electric light for projecting purposes. Thirty-five glass slides for the same were framed in cherry.

Desk for the English Department.—A small walnut reading stand, ornamental in its design and carefully made.

Vane for Agricultural Department.—This wind vane is mounted eight feet above the roof of the Experimental Building, and is arranged with a depending rod which carries an indicator, in the form of an arrow, to the ceiling of the hall two stories below. The arrow always points in the same direction as the vane, and the whole arrangement is very sensitive to variations in the direction of the wind.

For the Mechanical Department.—Two eight-inch gongs (one for the engine house and one for the shops), for signaling purposes; sand trough, flasks, rammers, slickers, etc., for the molding room; counter shaft for scroll saws; boring bar, and several cabinets for tools.

For proposed plan for the future development of this work, see "Outside Work." in a subsequent part of this report.

REPAIRS.

Although by appointment I have nothing to do with the repairs, yet since, as a matter of fact, much of the work has devolved upon my department, it is but just that I should speak of them here.

The present plan of keeping up the small repairs by student labor is one of which I do not approve. To do good repairing requires a workman of skill and experience, for in no other work is the care and judgment that comes only from long practice so necessary. Students, no matter how good in the main, can not always be depended upon. Mistakes are apt to occur, and ill-appearing work in conspicuous places will often follow as an inevitable result. The only way in which this can be avoided, providing student labor is utilized, is by active supervision. This duty I have been obliged to perform to a considerable extent ever since I have been connected with the Institution, and it is one, which, in justice to my regular work, I can not longer be expected to do.

My suggestion is that a competent man be employed whose only duty will be to attend to the repairs and minor improvements. There is plenty of such work, and the expense to the Institution will not be greater than at present. Such a plan need not embarrass the outside work in the shops, but, by improving its quality, it would increase its value.

STATE FAIR.

The Mechanical department has, for three successive years, made an exhibit at the State Fair at Indianapolis. In 1880, in connection with other departments, it showed some of its first work; in 1881 it represented the Institution alone; and in 1882 it made a large display in connection with the departments of Agriculture and Industrial Art.

The object of this has been to call the attention of the people to the practical work that Purdue is doing, and to impress them with the fact that successful results are being obtained. The interest manifested in the exhibits has been marked. No premiums have been offered for educational exhibits.

WORK OF STUDENTS PRESENTED TO OTHER INSTITUTIONS.

In April, 1881, at the request of a special committee, the School Board, of Louisville, Ky., was presented with a series of models equivalent to the work of one student during the entire course of shop practice at Purdue. In May, 1882, a similar set was presented to the Michigan State Agricultural College, at Lansing, at the request of Professor Carpenter, of that institution, and Mr. Reynolds, of the Michigan State Board of Agriculture. In September, 1882 (the present year), at the request of President Ingersoll, specimens of bench work in wood, wood turning, and vise work in iron, were presented to the Colorado State Agricultural College, at Fort Collins.

WANTS.

A Foundry.—The course in founding is at present very limited and is conducted under difficulties. We have a small room imperfectly fitted for bench molding, but excepting the forges, we have no means for melting. The class in pattern-making make use of the molding room enough to learn how a pattern of a given form must be constructed in order that it may be properly drawn from the sand, and they frequently mold their own patterns after completion. Molds thus made are run with lead, and on a few occasions with brass. The work done in this direction is only sufficient to give the class such practical knowledge of molding as is necessary to insure success in pattern-making.

It is very desirable that a course in founding be established, which, besides being valuable in supplementing other work, would be valuable in itself. To provide such a course, it would be necessary to erect a small cupola furnace and core oven, to further equip the molding room, and to add ladles, etc. The expense of all, if room could be provided, would be small, while the benefit to be derived from it can not be estimated.

A Special Course in Ornamental Machine Works.—There is a growing demand for a course in fret sawing, inlaid work, and ornamental turning, involving special chucks, etc., to fill the gap between the present wood working courses and the wood carving of the Industrial Art course. This would not be taken by all mechanical students, but would stand as a special course for such persons (principally ladies) as desire to make a specialty of ornamental work. It would require a small room away from the dust and vibration of the main shop, fitted with a few small and comparatively inexpensive machines. The work could be arranged to follow the regular course in wood turning and would be a valuable addition.

A New Building.—The principal need of the Mechanical department is larger and more convenient quarters, and upon their acquisition all other improvements depend. As will be seen by referring to the plan (page 105,) the floor of the main shop is crowded to its utmost, while the available wall space is made use of by tool racks and cabinets. The inconvenience of such a state of affairs, though at all times apparent, is most felt in wood work, where considerable floor space is, to say the least, desirable. It is with difficulty that a pair of trestles can be placed in any position where they will not obstruct a passage way, and when it is necessary for each student to use trestles of his own, as it is at times, the complications resulting are serious and annoying. Nor is it wholly a question of convenience, for many evil results are the outgrowth of an over-crowded shop. Besides this, the room is so low in the walls that one is obliged to stoop in passing the belts from the larger pulleys, the pulleys at the same time penetrates the ceiling several inches. Being under ground they are always damp, and at times exceedingly so. In spite of their many disadvantages these rooms have served our pur-

pose for the three years past in a very fair manner, but because of the increase in the number of students and because of the demand for more extensive and more thorough work, it is necessary that some change for the better be made; otherwise our work can not be much extended, certainly nothing new can be introduced.

Equipment.—A new building would not necessitate additional appliances, but for the continuation of good results, it is important that the present equipment be strengthened and further increased by the establishment of needed additional branches of work. New machines and small tools are wanted for work in both wood and iron; and as the number of students is rapidly increasing, a greater amount of duplicate appliances will be necessary. In view of the above facts, I hope that the Board of Trustees will prove its interest in the welfare of the department, by asking of the incoming Legislature a special appropriation for the erection of a suitable building, and for thoroughly fitting it for its work. The building should be of brick, constructed in a neat and substantial manner, and should not cost less than \$6,000. Its equipment, with what we already have, can be made as complete as need be by an expenditure of \$4,000, making a total of \$10,000 as the amount necessary to establish the department on a good working basis. If Indiana desires a school of training, by which her future foremen and master-mechanics are to be educated, she must provide for its complete establishment and support.

PART SECOND.

SYSTEM OF INSTRUCTION.

Before speaking of our work in detail, we shall do well to consider, in general, the present position of schools for mechanical training, and their relation to the apprenticeship system, now practically obsolete. Since courses of shop work are intended to give young men a knowledge of practical mechanics, it is evident that such courses are only necessary as a

substitute for the older plan. This system, by which our fathers became skilled workmen, was a simple, but effective, method of instruction. Why is it impracticable at the present day? Principally because the growth of manufacturing interests, stimulated by the rapid introduction of improved machinery, has replaced, by more pretentious establishments, the little shops wherein the master, with his one or two apprentices, work. A modern shop, or factory, is equipped with appliances especially adapted to the particular class of work carried on. These are simple in their adjustments, yet almost perfect in operation. To "learn the trade" is to learn to tend these machines by performing upon them a series of operations which, because of the perfection of the machine itself, and the sameness of the work, requires but little skill, and affords but a narrow field of practice. Thus, while mechanical productions constantly increase, and are improved in quality, the work of the individual operator is proportionally restricted in its range.

The demand is for special workmen, it is true, and it is equally true that any shop can develop such workmen from the roughest material in a short space of time; but these form the laboring element, the moving force, in the mechanical world. From what source is the thought necessary to the guidance of this force to come? What is the best preparation for men who are to direct and to control mechanical operations? This is the problem that confronts us and one that industrial schools are called upon to solve. A successful foreman, or superintendent, must look above and beyond the work of his men. He should be able to devise methods for accomplishing desired results, and to judge the value of every man working under his direction. To do this, besides a complete understanding of the particular branch in which he is engaged, he must possess a wide knowledge of general mechanical work. This puts mechanics on the same plane as other sciences; general elementary work first, followed by more extended work in any special direction.

In accordance with the above, the object of the Mechanical Department of Purdue University is to give young men theoretical instruction and practical training in the use of all the common tools for working in wood and iron, and to educate them in the fundamental principles of construction. To accom-

plish this result, no attempt is made to manufacture work for sale or to teach special trades; but, on the contrary, the constructive system with all its tendency to specialties is put aside, and the work arranged upon a true educational basis. The student is given practice with each tool by performing with it upon suitable pieces of material, such operations as will best illustrate its use and at the same time develop some principle of construction. Whenever it is possible, the material is worked into useful forms, but the principle involved is always of prime, and the utilization of the work of secondary consideration. By this plan (the Russian or Model System), the student is able to secure a maximum amount of information in a minimum of time. At the end of his course, his acquaintance with practical operations and appliances permits him to direct his attention in special directions as one thoroughly prepared to take up such work.

The special work of the Mechanical department is made up of three distinct features; namely, recitations, or lectures, known as the Supplementary Course of Instruction, class work in the shops, and work in the shops outside of classes, or "outside work." These will now be considered separately in the order named.

I.

SUPPLEMENTARY INSTRUCTION.

The recitations or lectures are daily, and extend through the first two terms of the Freshman year and the last term of the Sophomore year, Mechanical Drawing taking its place during the last term of the Freshman year and the first two terms of the Sophomore year. Since this line of work directs and assists the shop practice, it would be better if arranged to continue unbroken throughout the time that shop practice is in progress. The time devoted each day could then be reduced from an hour to a half hour, which, while keeping the total time the same as now, would distribute it better. As it is, by judicious anticipation of subjects, much, though not all, of the ground is covered.

A tool, or an appliance of any kind, used in the shop, is first

brought before the student in the class room. Here the different adjustments are explained and its theoretical action demonstrated; when he takes it up for work, he not only knows what it is for, but he can tell exactly how the best results are to be obtained, under whatever conditions he may be obliged to use it.

Before anything is made in the shop, a blackboard drawing (with dimensions) is presented to the class, from which the members take a rough sketch, and from this sketch, they prepare, at their leisure, a drawing to scale. If the work is complicated, working drawings are given them to be copied. In either case each one works from his own drawing; before using them, however, they are submitted for inspection and correction.

When a drawing is given out, the mechanical principle involved in the piece of work represented, is explained and its application pointed out.

As a whole, it is by this course of instruction that all necessary directions are given, and all explanations made in regard to the shop work; and by it many subjects are treated in a more extensive manner than it is possible to do by actual construction in the shops. Use has been made of the following works as text-books: Shelley's Work Shop Appliances (Text Book of Science), Rose's Pattern Maker's Assistant, and Rose's Practical Machinist; more or less use has been made of Holly's Saws, Northcott's Turning, and the first two volumes of Building Construction, published by Rivingtons.

In order that a better idea of this work may be obtained, I add copies of some of the examination papers used last year.

Wood Working Tools.

1. (a) What, and where, is the English standard of length? (b) What is the French standard? (c) The length of a metre in inches?

2. Explain the board-measuring table that is given on the framing square.

3. (a) What is a center-bit, and for what kind of work is it particularly adapted? (b) Distinguish between firmer and framing chisels, and between shank and socket-fitted handles.

4. If, in planing a board, the grain is obstinate, by what adjustments of the plane can best results be obtained?

5. In grinding a tool should the stone run towards or from the work, and why?

6. (a) How may a grindstone that has become untrue by use, be "trued?" (b) What should be the cutting speed of a grindstone for tools?

7. Describe, tell where found, and state the peculiar merits of the Washita and Arkansas oilstones.

8. (a) In a cross-cutting saw, what should be the angle of the advancing edge of the teeth? (b) What is it in its operation that controls the keenness of the point.

9. (a) In what two ways may a rip saw be set? (b) How can you find the proper angle for the teeth of circular cross-cutting saw? (c) Of a circular rip saw?

10. (a) What are trammels or trammel points? (b) How are winding-sticks used?

ELEMENTS OF CONSTRUCTION.

1. What five principles are to be adhered to in designing joints and fastenings?

2. Make a sketch, giving dimensions, of joints in 4x6 oak for each of the following purposes: To resist tension; cross strains; compression; and cross strain and tension.

3. Where should a mortise be cut in a timber subject to cross strains to weaken it as little as possible?

4. What are struttings, as applied to floors, and what office do they fill?

5. (a) As applied to the wall of a building, what is a sill, a plate, a stud? (b) How are common inside partitions generally put up?

6. Give a sketch of a king-post roof-truss; name the parts, and show, by detail sketches, how the different joints may be made.

7. (a) Give the strain, or strains, to which each timber in a king-post roof-truss is subject. (b) What is the longest span to which such a truss should be applied, and why?

8. (a) What are beads? (b) The object of their use? (c) When are they said to be "stuck," and when "planted?"

9. What is a dowel? A key? A slip-feather?

10. Given, the vertical height to be gained, 12 feet; hori-

zontal distance between first and last riser, 17 feet; to find the proper proportions for a straight stair, with one intermediate landing, 3 feet 6 inches long.

PATTERN MAKING AND MOLDING.

1. (a) After planing a board all over how should it be left to prevent warping? (b) If a piece of timber be well seasoned, is it liable to warp when worked?

2. (a) What is a core? (b) Sketch an example of each of the three classes of core-boxes. (c) Of what are small dry sand-cores composed? (d) How are green sand-cores strengthened to stand handling?

3. Show a section of a mold (indicate the parting lines on pattern and mold) made from a wheel pattern such as shown in Fig. A.

4. Sketch three ways in which the pattern for a casting of the form shown by Fig. B may be made, the line *ab* representing the face.

5. (a) What is the allowance for shrinkage in iron and in brass? (b) Define shake and draft.

6. Suppose you were to make a T pipe-fitting, with the branch half the diameter of the body; show how you find the length of the branch necessary to make the joint.

7. Show how to lay off the pieces for the body of a "built-up" elbow, each half to be composed of five pieces.

8. (a) What do you understand by "sweep and loam work," and in what class of work is it principally used? (b) How are large wheels cast without the use of complete patterns?

9. (a) How do sharp corners effect the strength of casting, and why? (b) Other things being equal, which way will ribs which are thinner than the plate to which they are fastened, tend to curve the plate, and why?

10. (a) How are very thin patterns retained in shape while the sand is being rammed about them? (b) If a pine pattern weighs six ounces, what will the casting in iron weigh? In brass?

Vise Work.

1. Name in order the six distinctive terms representing different grades of cut in files.

2. What is the difference between a flat file and a hand file of the same size?

3. Show a section of a crossing and of a feather-edge file. Are they straight or tapered?

4. What is a rubber? A rifler?

5. How should work be finished with a file?

6. How is a "clouded finish" produced?

7. How may pinning be prevented?

8. Wherein does the imperfection lie in the operation of tapered taps and adjustable dies?

9. What is the process of making a surface-plate after it has been worked up on the machines? Show the direction of the scraper marks in the different courses.

10. (a) Sketch three forms of scrapers used in the shop and indicate which of the three you like best. (b) What is a surface-gauge, and for what used?

Machine Work.

The following have been selected from a set of fifty questions used in an oral examination:

1. (a) Describe the form of a cutting tool best adapted to heavy wrought iron work? (b) For finishing light wrought iron.

2. What are spring tools, or springing tools, and for what are they used?

3. (a) What would you take as the average cutting speed for cast iron? (b) For wrought iron?

4. (a) What is a chaser? (b) What is hand chasing?

5. How do you proceed in centering work upon the face plate of the lathe?

6. Why are pointed centers not adapted to taper turning?
7. What can you say of pulley turning and balancing?
8. What can you say about finishing cuts in a cylinder?
9. In a fluted reamer what can you say of the number of flutes?
10. In reamers, taps and drills, what are the advantages and disadvantages in having more or less bearing surface around the circumference as indicated by a cross section?
11. What are "liners," as applied to bearings?
12. What is the result of having a flat drill ground with unequal bevels?
13. (a) What is a gasget? (b) How are small spiral springs wound?
14. What can you say about drifts?
15. (a) How are compound milling cutters made? What should be the speed of a milling cutter?

Engines and Boilers.

It is not intended to make a theoretical study of engines and boilers, but since a majority of the students would complete their shop work without knowing really anything about them, it is desirable that they be given at least a practical understanding of their operation and management. With this view the above subject is introduced as a basis for the closing work of the supplementary instruction.

The following have been selected from a set of fifty questions used in an oral examination:

1. What do you understand by the term piston speed?
2. What do you understand by the terms lap, lead, and clearance, as applied to a valve?
3. (a) What is a horse power? (b) Suppose: A =area of piston; P =mean pressure per square inch on piston; S =stroke of engine, and R =number of turns a minute; what is the horse power?
4. What is considered to be the shortest practicable point of cut-off for common slide-valve engine, and why?
5. (a) What is a variable cut-off engine? (b) An automatic cut-off engine?
6. What can you say of reversing gears?

7. (a) Sketch upon the blackboard a section of the Corliss admission valve. (b) Sketch the Corliss cut-off gear.

8. (a) Describe an indicator. (b) What is the indicated horse power of an engine? (c) The actual horse power?

9. Suppose the card shown by Fig. A to have been taken from a 12x18-inch engine, making 100 revolutions a minute. About what is its power?

10. Tell what you can about the card shown by Fig. B.
11. What materials are used in boiler construction?
12. What is heating surface and what superheating surface?
13. What can you say of the different forms of boilers?
14. (a) What is the strength of a single riveted seam? (b) A double riveted seam?
15. (a) What is foaming and how is it caused? (b) How may it be checked?
16. In case of low water, what should be the course of the engineer?

II.

CLASS WORK IN THE SHOPS.

The shop exercises are daily and of two hours each (ten hours a week) throughout the first two years of the College course. The work is divided into six branches or courses, which are as follows: Bench work in wood, machine work in wood, pattern making, vise work in iron, iron and steel forging, and machine work in iron. In each course a series of operations is performed, arranged to afford systematic practice in the use of the different appliances, at the same time permitting the development of such elementary principles of construction as are most frequently met with in every day practical work.

Each piece of work is marked or graded on the scale of 10, with 7 as the passing grade, (if the work is fair it is marked 7, if good 8, if very good 9, and if excellent 10). At the completion of each course the grades are averaged and reported on a scale of 100. The value of each piece is determined after careful inspection and in accordance with good judgment.

There is need of more system in grading, and it is only because such an improvement would not effect the quality of the work itself, and because of a want of time on my part, that the subject has been left until last, and has not yet received particular attention. A complete system should not only enable the separate piece of work to be graded methodically, but it should fix a value for each piece, in accordance with the amount of time required for its construction, so that the average would be practically based upon time, and not upon the number of pieces.

The Department provides tools and material for all class-work, and in return, claims the privilege of retaining all results.

The proportional size, or *scale*, of the drawings shown below vary with the size of the work they represent, the object being to have them all as large as convenient, for the sake of clearness. The scale given with each course may be relied upon, as in all exceptional cases the correct scale is marked upon the drawing. The principal dimensions only are given. The ex-

planations are not intended to point out details, but are simply to indicate the nature and extent of the operation performed.

The time given with each course represents the distribution of the thirty-eight weeks of a school-year; but since there are not thirty-eight *full weeks*, and since at least three days of each term is lost by the occurrence of examinations, the time for actual work is considerably less—the difference, in some branches, amounting to fully a week.

BENCH WORK IN WOOD.

Ten Weeks (100 Hours): Drawings One-eighth Size.

For this course there are five 9-foot and four 11-foot benches, each fitted with vise and drawer. Eight of the benches are provided with a set made up of the following tools:

One cross-cutting saw, one ripping saw, smooth-plane, jack-plane, jointer, set of firmer-chisels, $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1 and $1\frac{1}{2}$ inch; set of framing chisels, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, 1 and $1\frac{1}{2}$ inch; drawing-knife, back-saw, set of 13 bits from $\frac{1}{4}$ to 1 inch, bit-brace, mallet, oil-stone, try-square, framing-square, screw-driver, hammer, hatchet, 2-foot rule, two scratch-gauges, bevel, and nail-set. Besides the eight sets as given above, there is a good supply of other tools which may be passed around to the students as needed—a full set of iron planes, beading and matching planes, hollow and round planes, clamps, screw-boxes, expansion bits, etc.

Particular attention is given to laying off work with the square, bevel, and gauges. To cut and fit material after it is "lined," is but routine work; to lay off the lines requires the application of fixed principles, coupled with care, thought, and judgment.

The practice with the cutting tools is so arranged as to involve the most important (saws, planes and chisels), as frequently as possible. To learn to keep these in order is one of the principle objects of the course.

First Exercise.—Planing and Sawing.

The material is a rough pine board 1 inch thick, 12 inches wide and 48 inches long. By use of the proper planes one face

is first smoothed; the second face, beside being smoothed, is made as nearly as possible a true plane, (straight both ways and "out of wind,") use being made of the winding-sticks in connection with the planes. With the second face as a working face, one edge is jointed (made straight and at right angles with the working face) from which, as a working edge, the board is "lined off" as indicated by drawing (not given) for an exercise in sawing. Practice with the saws is then given in cross cutting and ripping.

Second Exercise.—Box—Practice in Gauging, Joining, Nailing and Finishing.

The material, from the board worked upon in the first exercise, consists of two pieces 5 inches wide by 17 inches long for the sides, two pieces 5x9 inches for the ends, and one piece 10½ x17 inches for the bottom; all about ¾ inch thick. A working edge is produced on each piece from which the side and end pieces are worked down to 4½ inches wide. They are then all scribed across, and cut to the proper length with the back-saw. The box is then nailed together; the nails set; the ends and sides finished square with the bottom and with each other.

Third Exercise.—Bench Hook.

The material is cut from a two-inch poplar plank. The edges are jointed, lined off, and the two triangular pieces sawed

out. This illustrates the necessity of some provision for starting a saw when the cut is to be made at an acute angle with the surface of the work.

To avoid repetition it may be stated that the material for the next five pieces is cut from a rough two-inch plank and brought to a true square in sections before being laid off with the proper lines for cutting, thus giving needed practice with the saws and planes. The material for the remaining pieces of the course is taken from suitable dressed lumber and worked to the proper size.

Fourth Exercise.—Halved-Splice—Sawing and Fitting.

The two pieces, between which the splice is made after being lined off, are sawed to line, fitted accurately together with the chisel, and secured by nails as indicated. It is then trued up with the plane and the ends squared with the back-saw.

Fifth Exercise.—Splayed-Splice.

This involves the same practice as No. 4, but on account of splayed ends, it is more complicated to lay off and difficult to cut.

Sixth Exercise.—Mortise and Tenon Joint.

This, as an example of several similar joints, illustrates the manner in which all are lined off and cut. The tenon is cut with the back-saw (sometimes called *tenon-saw*), and the mortise bored and chiseled out. After the joint is fitted, it is pinned, as shown, and the parts squared to length with the back-saw.

Seventh Exercise.—Open Dove-tail Mortise and Tenon Joint.

This piece, though differing in detail, and presenting a different form of construction, involves about the same operations as No. 6.

Eighth Exercise.—Keyed Mortise and Tenon Joint.

A combination of Nos. 6 and 7, in which the joint is secured by a key, obviating the necessity of a pin.

Ninth Exercise.—Mitre-Box.

Introduced to show the manner of laying off and cutting the mitres.

Tenth Exercise.—Carpenter's Trestle.

An excellent exercise in developing the angles for giving the legs the required spread. When all parts are secured together, the legs are "scribed" to the proper length.

Eleventh Exercise.—Dovetailing.

An elementary form of a dovetail joint, affording practice in laying off and cutting.

Twelfth Exercise.—Dovetailed Box.

The application of the principle developed by No. 11 to a common box.

Thirteenth Exercise.—Drawer—Lap Dovetailing and Rabbeting.

One side of the drawer is lap-dovetailed to the front, while the other side is rabbeted, thus showing two ways by which

such a joint may be made. The front and sides are ploughed for the reception of the bottom, and the whole, when completed, is a well-made drawer.

Fourteenth Exercise.—Blind Dovetail.

Showing how a dovetailed joint can be made, which, when together, will appear as a mitred joint, thereby showing no end grain of the wood. Only one angle is made; its application is apparent.

Fifteenth Exercise.—Panel Door—Framing.

The frame is mortised and tenoned together in the usual way, and is ornamented by a shop chamfer as shown. The square panel is screwed to the back.

Sixteenth Exercise.—Queen-Post Roof-Truss.

Besides giving many useful hints in truss building, this piece affords excellent exercise in working accurately from drawings made to scale, and I think it doubtful if better practice in laying off work could be found. All lengths and all angles are developed from the drawing, and by following them the parts are made separately and are not fitted together until all are done. Different forms of trusses have been tried. In one class, each student completed a king-post truss; in another, queen-post trusses, such as shown, were made by two students working together on each truss.

It should be remembered that the supplementary instruction keeps along with this work, to show the application of the different principles as fast as developed.

MACHINE WORK IN WOOD.

Four Weeks (40 Hours).—Drawings One-fourth Size.

The appliances are as follows: Four wood turning lathes, three-foot bed; a wood turning lathe, nine-foot bed; a Fay scroll saw, and a circular sawing machine. The lathes are each provided with gouges and chisels of one-fourth inch, one-half inch, and one inch; one parting tool, a pair of calipers and compasses, and a rule.

In wood turning, besides commanding the use of the tools, it is desirable that one be able to judge accurately, by the eye alone, the proportions of details, so that by this means curves and small quirks, which are not easy to measure, can be produced on the work, that will conform so nearly to the same detail on the drawing that no difference is noticeable.

In chuck work upon the lathe much ingenuity may be exercised, and there is scarcely an end to the forms which may by different means be produced. The exercises given are types of many varieties.

First Exercise.—Straight Turning.

The material is 3 inches square and 8 inches long. It is operated upon by the gouge and chisel until brought to a cylinder of the required diameter, which is, determined by the calipers, when it is lined off with the compasses, and the lines cut with the chisel as shown.

Second Exercise.—Cutting In.

(This term is used to designate cuts made at right angles to the axis of the work.)

Material 3 inches square and 9 inches long. It is reduced to a cylinder of the required diameter, the parts to be cut marked, and reduced as shown. "Cutting in" illustrated a new use of the chisel.

Third Exercise.—Convex Curves with the Chisel.

This is reduced to a cylinder of the required diameter, from material the same as No. 2, lined off, and the curves, as shown, made with the chisel.

Fourth Exercise.—Compound Curves with the Gouge.

Reduced to a cylinder, the same as No. 3, lined off, and the curves, as shown, cut with the gouge.

N. B.—The four above pieces embody the elements of the work, and if one is successful in making them, he has, as far as handling the tool is concerned, about all in principle that there is in wood turning. If a failure is made in making one of these pieces, a second and even a third attempt is allowed, since it is useless to proceed until they can be successfully produced. To give increased skill in the use of the cutting tool, Nos. 5, 6, 7 and 8 are introduced.

From this point all work is polished in the lathe with shellac varnish.

Fifth Exercise.—Pine File-Handle.

There are three sizes made, varying from three to five inches in length. Some two of the three sizes are made by each student. All handles are nicely ferruled and polished.

Sixth Exercise.—Cherry Chisel Handle.

Made in three sizes, varying from 5 inches to 6 3/4 inches in length; some one size is made by each student.

Seventh Exercise.—Walnut Turning Handle.

Made in three sizes, varying from 7 inches to 11 inches in length; some one size is made by each student.

Eighth Exercise.—Mallet.

There are two forms, one being made by each student. The

one shown, known as No. 8 B, is made heavier by the application of iron rings as shown at II—these rings form a part of the course in forging. No. 8 A is a common form of mallet without the iron rings.

Ninth Exercise.—Picture Frames. (Chuck Work.)

Of cherry or walnut, and is the first piece made without the aid of the tailstock of the lathe. Since it is turned both inside and out, it involves two chuckings.

Tenth Exercise.—Card Receiver. (Chuck Work.)

There are two forms, the one shown being No. 10, A. Both are made in the three pieces, (the top, base, and piece connecting them,) each piece of a different kind of wood. It presents different features in chucking from No. 9.

Eleventh Exercise.—Cup. (Chuck Work.)

There are two forms, the one given being No. 11, A. It is made of any hard wood and as will be seen by the partial section is worked out on the inside until quite thin. It presents new features in chucking.

Twelfth Exercise.—Ball. (Chuck Work.)

This is probably the most difficult piece of turning that would be met with in common practice, for to turn a true sphere requires a good degree of skill. It is made of walnut and usually in an excellent manner.

Although the scroll-saw is used a little in sawing out the material for No. 9 and 10 the work with it does not amount to much. The following pieces are therefore intended to give practice in its use.

Thirteenth Exercise.—Small Bracket.

Made from $\frac{3}{8}$ -inch poplar. It shows the advantage of having holes into which the saw may run where sharp angles are to be formed, whether inside or out, and affords a little practice in sawing to line.

Fourteenth Exercise.—Builders' Bracket.

Made in three pieces, with turned ornaments, as shown. It affords practice with the saw.

PATTERN MAKING.

Twelve Weeks (120 Hours).—Drawings Quarter-size.

It is supposed that the student is now familiar with wood-working tools and machines, and that he possesses a fair degree of skill in their use. The work of this course, though well calculated to give increased skill, is arranged chiefly with reference to the principles of pattern construction to be developed. There is no set of fixed models forming the work of each class, for the range of application for patterns is so great, extending as it does into almost every branch of industry, that an infinite number of such courses might be arranged which would be equally valuable. The object is to afford such practice as will develop the details of the work; the manner in which the different pieces of wood forming the pattern shall have the grain lie; where and what allowances are to be made for warping, shrinkage, finish, etc.; and in what manner different patterns of any form should be constructed to draw properly from the sand.

I believe that best results can be accomplished by increasing the variety, by changing somewhat the work of each class, and it is not at all necessary that all in the same class should be on work precisely alike. On the contrary, if different, the student not only obtains an understanding of his own work but he learns the peculiar features in his neighbor's. As a result of the practical workings of this plan, after three years operations, we have an exhibition of pattern work embracing quite an extensive field of application.

The appliances for pattern making are the same as used in the two preceding courses.

The work presented below will give a good idea of the course.

First Exercise.

This is always a simple pattern which will necessitate the making of allowances for shrinkage, draft, and finish. It may be of lathe work or of bench work, or it may be of both. The ball crank and handle shown are fair examples of this exercise. The crank, which is made in two pieces, is held together for turning by glue, with paper between the joint. The spherical portions are made true by use of a template, shaped to the required curvature from a thin piece of hard wood. The handle, being smaller, is usually made in one piece.

Second Exercise.—Flanged Pipe-Fittings.

These are both straight and curved fittings, and have been made in three different sizes for pipes of one inch, one and one-half inch, and two inches in diameter. Each student makes only one pattern; it may be of either class. The branched fitting, besides being made as a straight T, as shown in two views (Fig. 2), has been made with branch of different size from the body, and with the branch at an oblique angle with

the body. Besides the elbow, shown at Fig. 3, curved pipe fittings have been made, such as return joints, and as off-set

joints. All patterns of pipe fittings are made in two parts, as shown by the line on A', Fig. 2, to facilitate the molding.

Third Exercise.—Core Boxes.

Fig. 4 shows a core box for the T fitting, Fig. 2, and Fig. 5 the core box for the elbow, Fig. 3. Core boxes are made for pipe fittings in all their different forms, but no single student makes more than one, and that does not belong to the same class as the fitting which he has previously made. If he makes

a pattern for an elbow, he makes a core box for a T, and *vice versa*. This plan gives each student practice in both

straight and curved work, for the patterns and core boxes involve very similar operations, though they are quite different themselves.

Fourth Exercise.—Built-up Pulley Patterns.

A built-up pulley pattern of some description is made, by

each student; the one illustrated by a face and side view is a fair example. This pattern is made or "built up" of six courses of six segments each, giving a form of construction wherein the grain of the wood is made to run favorably throughout the entire circumference. This gives uniform strength and prevents a change in form by unequal shrinkage.

Fifth Exercise.

To this point the work, though varying in size and proportions, is much the same for all. It now diverges. Each student is given a piece of work of some magnitude. Gear wheels, shaft hangers, parts of machines, etc., have been made. The engine cylinder, with its core boxes, as shown, forms an example which is rather more extensive than the average.

Fig. 7 shows the pattern with the core prints P, P and P. Fig. 7a shows the box for the main core which is to be received

by the prints P P; Fig. 7b, the box (with prints for the port cores) for the core to fill the print P on the pattern; Fig. 7c

shows the two halves of the core box for the exhaust port, and Fig. 7d a side and end view of the induction port core box.

Rose's Pattern Makers' Assistant is used as a text book throughout the time that the above work is in progress.

WISE WORK IN IRON.

Ten Weeks (100 Hours).—Drawing Half-size.

The shop is provided with two substantial benches, fitted with eight iron working vises, and a drawer for each vise. The supply of small tools (which are given out as needed) are as follows: Cold chisels (flat, cape and round nose), chipping hammers, a good assortment of files, file cards, calipers, squares, and hand vises; there are also surface plates, surface gauges, and other measuring and testing appliances that may be used when necessary.

The course is intended to give practice in the use of the different hand tools for metal, to give practice in keeping them in order, and to illustrate the different methods employed in fitting and finishing work in the vise. The illustration represents the finished work.

First Exercise.—Chipping.

The finished piece is shown in three views at Fig. 1. The material is a rectangular cast-iron block 2x4 inches by 1½ inches thick, with the lug L for convenience in holding it in the vise. The face and edges are planed, and the lines for chipping marked

off on the machine. The first operation is to chip the corners down to line, producing surfaces marked A, with a $\frac{1}{8}$ -inch flat cold chisel; the second is to cut the spline marked B with a $\frac{5}{16}$ -inch cape chisel, and the third is to cut the circular groove marked C with a round-nose chisel.

Second Exercise.—Key Seating.

The material, as shown by the two views of Fig. 2, is a hub with a flange running round it—the hole is bored on the lathe.

The operation is in laying off and chipping a key-seat (as shown at K) through it $\frac{5}{16}$ inch wide and $\frac{1}{4}$ inch deep; one such key-seat is made by each student. It will be seen from the character of the piece that the conditions in this operation are the same as in key-seating a pulley or a hub of any kind.

Third Exercise.—Hack Sawing.

The material is cast iron 2x4 inches and $\frac{3}{4}$ inch thick, planed on both faces but not upon the edges. The operation is to saw a piece $\frac{7}{8}$ of an inch square from two corners as shown, Fig. 3, A A, on the pieces cut out.

Fourth Exercise.—Chipping and Filing Cast Iron.

The material is 2x4 inches by $1\frac{1}{2}$ inches thick, planed upon the sides and ends but left with the scale on the top. A line is given on each of the two sides $\frac{1}{4}$ inch below the upper edge to which line the surface is to be reduced. The dotted line A B, shows the size of the block before being operated upon. The operation is in first removing the scale and bringing the surface nearly to the line with the chisels, after which it is cross-filed to line and finished by draw-filing to as true a surface as possible. Nothing finer than an 8-inch smooth file is used on this piece. It is shown in two views as Fig. 4.

Fifth Exercise.—Wrought Iron Chipping and Filing. (Half Round File.)

The material is wrought iron $2\frac{1}{2}$ x4 inches by $\frac{1}{2}$ inch thick, planed on one face, upon which the piece is lined to a template. The operation is in chipping and filing both the concave and convex surfaces to line, having them square with the working face; they are finished by draw-filing in oil. The face opposite the face that is lined, is filed up and polished with emery cloth. In cross-filing upon curved work, a peculiar twist of the wrist is necessary, which is not easily acquired. The piece is shown as Fig. 5.

Sixth Exercise.—Round Filing. Squaring.

The material is cast iron, 2x4 inches by $\frac{1}{2}$ inch thick, with a $\frac{1}{2}$ -inch round hole in the center, and is planed on its two faces, the edges being left with the scale on. The first operation is in filing the $\frac{1}{2}$ -inch round hole to an ellipse, as shown (Fig. 6), to be finished square with the working face, guided by a line on one face only; and second, the outside edges are made square with the working face and square with each other all around—finished by draw-filing with an 8-inch smooth.

Seventh Exercise.—The Ring.

The material or blank for this piece is shown as B, Fig. 7, while the other two figures show two views of the finished piece. The operation is in making the material forming the ring a true circle in section, in making all surfaces of the tang T straight, and at right angles with each other, and in making the tang meet the ring in a clearly defined manner, as shown. It gives practice in round filing and in systematic calipering.

Eighth Exercise.

Although the piece shown at Fig. 8 is frequently substituted by fitting of a constructive character, as for example the strap to a connecting rod, yet the piece shown represents the work of the exercise. The operation is in fitting the key A to the slot of the rectangular piece of wrought iron, as shown. After the fit is complete the whole is squared up so that every surface is square with its neighboring surfaces, and all but the bottom is superfinished in oil.

Ninth Exercise.—Checker Work. (Free Hand.)

The operation upon a rough casting of about the shape shown by the finished piece, Fig. 9, is shaped up all over and the lines laid across the face. Two lines of equal width and parallel, are made by the instructor. The student completes that series and begins and completes the second series, crossing

the first, maintaining as nearly as possible the distance apart, the width, and the parallelism of the lines, as given. It is a test for the eye as well as for the hand.

Tenth Exercise.—Point. (Hand Vise Work).

The material is a piece of soft steel wire $\frac{1}{8}$ inch diameter and 3 inches long. The operation is in filing a point $\frac{1}{8}$ inch long, which will be in the center of the piece, of straight taper, and of a round section. The use of the hand vise requires a peculiar twist of the wrist which is difficult to acquire.

Eleventh Exercise.—Shoulder. (Hand Vise Work).

Material, soft steel wire $\frac{1}{4}$ inch diameter and 3 inches long. The operation is in filing $\frac{1}{8}$ inch of its length to an $\frac{1}{8}$ inch in diameter, keeping the reduced portion round in section, straight and in the center of the stock, with an even shoulder.

Twelfth Exercise.—Screw. (Hand Vise Work).

Material, soft steel $\frac{3}{8}$ inch diameter and 4 inches long. Operation, a line representing the thread is marked off by the instructor once around the piece, beginning at the end; the mark is continued by the student ten times around the piece, keeping the same pitch as given by the first time around. After the screw is marked off by a light line, the filing is carried on by

alternate use of the three-cornered and half-round files, and is continued until the screw is complete. It is intended to train the eye in free hand work, and to continue the practice with the hand vise.

Thirteenth Exercise.—Surface Plates. (Scraping.)

This is a cast iron plate, strongly ribbed to prevent deflection; it is worked upon the planer as accurately as possible before it comes to the vise-worker. The operation is in filing and scraping the surface S, Fig. 13, until it will bear evenly all over when placed upon another plate known to be accurate. Two such plates, when brought in contact by being rubbed together, thus expelling the air from between them, require the application of considerable force to pull them apart.

FORGING.

(Drawing Fourth-size.)

Iron forging.....	14 weeks (140 hours)
Steel forging.....	4 weeks (40 hours)
Iron and Steel forging.....	18 weeks (180 hours)

Iron Forging.

There are four circular forges of iron each provided with an iron water tank in front and a similar coal tank behind, and each supplied with air blast by power; the blast is regulated by a suitable valve. There is one portable forge that may be used when the machinery is not running. Besides an anvil for each forge there are tongs, punches, hot and cold chisels, heading tools and a hammer. There are also two sets (one for each room) of swedging tools—set hammers, flatters, fullers, etc.

In forging, considerably time is necessarily spent in acquiring the elements of the work; in learning where, and how, and at what heat, a blow should be struck to give a desired result, and in becoming able to keep the fire in good order. A good fire is a most valuable factor and the habit of always keeping one is a most difficult one to inculcate.

First Exercise.—Drawing.

(To make longer by increasing the cross-section.)

The stock is $\frac{1}{2}$ inch square Norway iron of convenient length. The operation is in drawing down one end to $\frac{3}{8}$ inch square for 5 inches in length.

Second Exercise.—Upsetting.

(To make shorter by increasing the cross-section.)

Stock $\frac{1}{2}$ inch square Norway iron 5 inches long. Operation is in upsetting it to $\frac{5}{8}$ inch square and 3 inches long.

Third Exercise.—Drawing.

Drawing from round to square, from square to octagon and from octagon to a round point. Careful hammering is necessary to form the shoulder evenly.

Fourth Exercise.—Upsetting.

Changing a portion of $\frac{1}{2}$ inch round iron to $\frac{1}{2}$ inch square, which requires it to be first upset to give sufficient material for the corners.

Fifth Exercise.—Bending.

It is difficult for a beginner to bend iron without marking it with the hammer, to give practice in this particular, two or three rings, as shown, are introduced. They are from $\frac{1}{4}$ inch round iron.

Sixth Exercise.—Open Eye.

This involves drawing and bending.

Seventh Exercise.—Hook.

Drawing, bending and twisting. The ends are found as the eye of Fig. 6, the twist is added after all else is complete.

Eighth Exercise.—Fagot Weld.

This form of weld is first introduced because of its simplicity, the pieces requiring no scraping. The material is one piece of Norway iron, $\frac{7}{8} \times \frac{1}{4}$ inch, of convenient length for a porter (a handle by which work is manipulated), to the end of which three pieces, $\frac{7}{8} \times \frac{1}{4}$ inch by 4 inches long, are "stuck." When all are "stuck," a heat is taken and all welded into one solid piece. The ragged ends of the weld are then cut off to the proper length, and the piece finished as shown. The finished piece is thus composed of four pieces welded lengthwise.

Ninth Exercise.—Scarfed Weld.

This piece shows the manner of preparing the ends (scarfing) of two pieces of iron that are to be welded in the direction of their length by lapping one upon the other. The manner of heating is practically the same as in No. 8, but the manipulation of the pieces by tongs in "sticking" them together is more difficult. The whole is finished to the size shown, and in a good piece scarcely a trace of the weld can be found.

Tenth Exercise.—Butt Weld or Jump Weld.

This illustrates a manner of uniting two pieces of iron in the

direction of their length without lapping, but by simply allowing the ends to butt against each other. The stock is two pieces of $\frac{1}{2}$ inch round iron, 6 inches long, which are upset on one end and welded as shown.

Eleventh Exercise.—Welded Ring.

This piece introduces the proper form of scarf for round iron and gives practice in welding and shaping a round iron ring. The stock is $\frac{3}{4}$ inches diameter by 12 inches long.

Twelfth Exercise.—Welded Ring.

Formed by bending the iron edge ways as shown. Stock $\frac{1}{4} \times 1$ inch by $10\frac{1}{8}$ inches long.

Thirteenth Exercise.—Welded Ring.

Formed by bending the iron flat ways as shown. Stock $\frac{1}{4} \times 1$ inch by $12\frac{1}{2}$ inches long.

Fourteenth Exercise.—Drawn Corner.

The operation is in bending or drawing the corner to a sharp angle as shown. It is an easy matter to bend a piece of iron to a right angle, but if simply bent, the outside corner will be rounding. The stock is $\frac{1}{2}$ inch square, 8 inches long.

Fifteenth Exercise.—Drawn Corner.

Involves the same operation as No. 14, but since the arms are longer it is more difficult to make them stand at the proper angle; this piece gives the first practice in punching and beveling. The stock is $\frac{1}{2}$ x1 inch by 9 inches long.

Sixteenth Exercise.—Connecting Rod Strap.

Two drawn corners near together on the same piece. A difficult piece of work. Stock $\frac{3}{8}$ x1 inch by 9 inches long.

Seventeenth Exercise.—Welded Corner.

A right angle formed by welding two pieces together illustrating the form of scarf necessary in such an operation. The stock is two pieces, each $\frac{1}{4} \times 1$ inch by 4 inches long.

Eighteenth Exercise.—Welded T.

Shows the manner of scarfing and welding two pieces as shown. Stock, one piece $\frac{1}{4} \times 1$ inch by 4 inches long, and one piece $\frac{1}{4} \times 1$ inch by $4\frac{1}{2}$ inches long.

Nineteenth Exercise.—Brace.

One end is in the form of an eye, through which a bolt may be passed, and the other in the form of a tang with screw holes; both are bent at an angle of 45° with the body, or at a right angle with each other. The eye is formed from the material of the body and is the principal new feature presented by the piece; the tang is formed separately and welded to the body. The stock is $\frac{1}{2}$ inch round, 14 inches long and $\frac{1}{2} \times \frac{3}{4}$ inch by 4 inches long.

Twentieth Exercise.—Heading Tool.

The enlarged end or head of this wrought iron tool is formed in the same way as the eye in No. 19, but is much more difficult to make on account of its proportions. It is punched, filled up and case hardened by the prussiate of potash process. The stock is $\frac{3}{4}$ inch round 14 inches long.

Twenty-first Exercise.—Nails.

A dozen nails made in the heading tool No. 20. The stock is $\frac{5}{16}$ inch square nail rod of convenient length.

Twenty-second Exercise.—Square Headed Bolt and Nut.

The bolt is formed in a heading tool from $\frac{1}{2}$ -inch round iron, $6\frac{1}{4}$ inches long. The nut is made from a square piece cut from a bar $\frac{1}{2} \times 1$ inch.

Twenty-third Exercise.—Hexagon Headed Bolt and Nut.

The bolt is formed in a heading tool from $\frac{1}{2}$ -inch round, the same as No. 22. The hexagon nut, though from the same stock, is made in a manner quite different from the square nut.

Twenty-fourth Exercise.—Butt Weld.

Shows the manner of scarfing and welding when a piece of round iron meets a piece of flat iron at right angles. It is welded in a heading tool, which fact accounts for its position in the course. The stock, $\frac{1}{2}$ -inch round, 5 inches long, and $3\frac{3}{4}$ inch by 6 inches long.

Twenty-fifth Exercise.—Eye Bolt.

Bending and welding round iron in the shape of an eye. Stock $\frac{3}{4}$ inch round, $6\frac{1}{2}$ inches long. This exercise is in making the eye bolt E, but the ring No. 11 is embodied with it, forming a *ring bolt*, as shown. This makes the work more difficult and more complete.

Twenty-sixth Exercise.—Hasp.

Made to the form shown by bending and welding. Stock, $\frac{5}{16}$ inch square by 15 inches long.

Twenty-seventh Exercise.—Chain Hook.

This is drawn, shaped and bent from a piece of iron $\frac{3}{8}$ x 1 inch by 4 inches long. No piece, so far presented, is so thoroughly changed in form in the process of its production as this.

Twenty-eighth Exercise.—Chain.

Three links only, for if they can be successfully made and connected, a chain of any desired length may be produced. The stock for each link is $\frac{3}{8}$ inch round by 8 inches long.

Twenty-ninth Exercise.—Swivel.

A difficult piece of forging. The stock depends upon which of two ways it is made, and the process is not easily described.

Thirtieth Exercise.—Tongs.

A pair of smithing tongs made and finished in excellent shape. The jaws are formed from $\frac{7}{8}$ square iron, and welded to lighter pieces for the handles.

STEEL FORGING.

Having passed successfully through iron forging, the student already possesses considerable skill in the production of forms, and since aside from the question of heat, steel is worked into

different shapes in much the same way as iron, but little practice in it is necessary. The whole force in this work is thrown upon the hardening, tempering and annealing processes, which are practiced by different methods, and the details as clearly illustrated as possible.

Thirty-first Exercise.—Welding.

Steel to iron and steel to steel, by lap weld, as shown. This gives practice in the use of a flux, and in heating steel for welding.

Thirty-second Exercise.—Welding.

Steel to iron, the peculiarity being the split scarfing as shown.

Thirty-third Exercise.—Wrench.

This is the only piece in steel forming. It is sufficient to show the difference between steel and iron in working.

Thirty-fourth Exercise.—Blacksmith's Punch.

A simple forging, presenting a convenient form for the first lesson in tempering. It is hardened and tempered at the point to a blue.

Thirty-fifth Exercise.—Center Punch.

Tempered at the point to a brown.

Thirty-sixth Exercise.—Flat Cold Chisel.

Though apparently a simple form, it takes care to make a shapely tool; the temper is drawn to a brown.

Thirty-seventh Exercise.—Cape Chisel.

Though of different form, the same may be said as of No. 36.

Thirty-eighth Exercise.—Drill.

Required to be straight and symmetrical; it is tempered to a dark straw color.

Thirty-ninth Exercise.—Diamond Point Lathe Tool.

Forged to the form shown and tempered to a light straw color.

Fortieth Exercise.—Side Tool for Lathe.

Forged as shown, and tempered along the cutting edge to a dark straw color—it is a difficult piece to dip properly.

Forty-first Exercise.—Tempering.

A piece of steel, of the form shown, is hardened and tempered all over to the proper degree for a wood working tool (chisel or plane iron). This is the first piece hardened throughout, all of the preceding being hardened at and near the cutting edges only. The temper is drawn on a piece of hot iron.

Forty-second Exercise.—Graver.

For operating as a hand tool upon brass or iron. It is hardened all over with the exception of the tang which is left soft and the temper drawn to a light straw color.

Forty-third Exercise.—Spring.

Forged as shown; it is hardened and the temper "flashed off" in oil. As a test it must stand to be straightened and returned to its original position.

Forty-fourth Exercise.—Spring.

Forged as shown; hardened in oil, and the temper drawn by the flash of a pine stick. It should be sufficiently elastic to enable the end A to be bent down to the line B and return to its first position.

MACHINE WORK IN METAL.

Twenty Weeks.—(200 Hours.)

The appliances for machine work are as follows: Two machine lathes 14 inch swing by 6 foot bed; one machine lathe 7 inch swing by $3\frac{1}{2}$ foot bed; a speed lathe 8 inch swing by $3\frac{1}{2}$ foot bed; a machine planer 3 foot bed by 18 inches wide; a vertical drilling machine; an emery grinder and grindstone. There is a fair supply of chucks, centres, etc., for the different machines, and of drills, reamers, gauges, squares, calipers, etc., for general purposes. All are good tools and are in a good condition.

The course is intended to give students a knowledge (1) of the different machines—their adjustment and action; (2) of the general principles governing work upon the common metals in machines—shape and adjustment of the cutting tools, cutting speeds, and feed, etc.; (3) of the different methods of securing in the machine pieces of work to be operated upon—centering and chucking; (4) of the use of the different adjuncts of the machines; and (5) of assembling and uniting the finished parts of machine work, and of lining up and adjusting machines under construction.

Although three classes have passed through this work, and have accomplished all that could be expected of them, as yet the course is not sufficiently perfected to present in detail.

This is because of two reasons: First, the want of duplicate appliances whereby all students could be on the same work at the same time; and, second, the small number of students forming a class in machine work (as yet never more than four) has not required the system which, with a larger class, would be necessary. With so small a number, there is ample time for one to oversee and direct the operations of each student, who is thus enabled to advance as rapidly as possible upon work which may be entirely different from that of his neighbor. Notwithstanding its unsystematic appearance, I believe, with our appliances and with our classes, that no plan could yield better results.

The course at present is one of principles and not of models. That is, there is a fixed course of operation to be performed by each student, but the character of the work involving them is more or less varied to suit such conditions as our limited appliances necessitate, and in some cases to make the work assume forms available for construction. There are several models for illustrating the elementary principles of the machines which are made by every student and which have always been the same, but since they are few and may yet be subject to change, they will not be presented.

The course is as follows:

First. Oiling and operating the lathe without work upon it; determining the cutting speed for work of different diameters, and calculating the speed from the speed of the line shaft with the lathe belt in different positions. The same with the planer.

Second. Centering work for the lathe; squaring the ends; straight turning; polishing; taper turning.

Third. Straight planing; bevel planing; squaring off ends—all held by clamps and dogs.

Fourth. Chuck boring; fitting work to be turned up to an arbor; turning straight driving fits; hand turning in the speed lathe.

Fifth. Screw cutting—straight V thread; turning and threading bolts and nuts; inside screw cutting; cutting square threads.

Seventh. Drilling and counterdrilling; drilling holes in two pieces to coincide.

Eighth. Chuck drilling and taper reaming upon work held by the center rest of the lathe, without the tailstock; taper fitting.

Ninth. Use of the center rest in turning long pieces of small diameter.

Tenth. Slotting and fluting work held in the planer centers.

Eleventh. Practice with the boring bar in the lathe.

As one of the results of this course, I will mention a three-horse power horizontal steam engine (cylinder 4x6 inches) which is now complete.

III.

OUTSIDE WORK.

This, the third feature of our system of instruction, has already been defined as being all work done in the shops by students outside of class hours, and for which they receive compensation. It is not compulsory, but students are encouraged to take part in it, and most of them do so. It is in progress for an hour or two (depending upon the length of the days,) each afternoon after the class work is through with, and on Saturdays. Its character, as at present carried on, can be best determined by referring to the first part of this report (page 108).

As an educator, the value of this work can not be overestimated; it gives the student just the practice needed in applying information acquired in the class to work of actual construction. The work is given out with a few suggestions as to the manner in which it is to be done, but in all matters of detail, the student is allowed to exercise his own judgment and pursue his own plans, thus enforcing a responsibility which is manifested in the pride taken by each one in the success of his work. Outside work never precedes the class work; that is, the work of a Freshman during the first term is confined to bench work in wood, while that of the Sophomore in the last term may be in any one of all the different branches taught.

It is evident that the need of such work, by the institution alone, will not always be sufficient to keep all employed; under such circumstances I shall advise the manufacture for sale, or under contract, of some line of goods which will provide the desired amount of work. Such a plan would not be expected to prove profitable, but could be made to pay its own way, which is all that should be expected of it.

In conclusion, I will add that at the present time there are as many students in the shops as can well be accommodated; the work is excellent, and the prospect of a successful year has never been better. I am well pleased with the work of the first three years, and hope that the department's success during that time will prove a true harbinger of future growth and good work; to this end it must receive encouragement and support.

Respectfully submitted,

WM. F. M. GOSS,

Instructor of Practical Mechanics.

DEPARTMENT OF NATURAL HISTORY.

President E. E. White:

DEAR SIR—I beg leave herewith to present my second biennial report upon the methods of instruction, the appliances and collections of the Department of Natural History, together with a brief statement of the most urgent needs of the department.

In my previous report, having just assumed charge of the instruction connected with the chair of Natural History, I could only outline the plan of teaching which I expected to follow, and state the needs of the department for carrying out this plan. By the liberal appropriations of the Legislature at its last session, the Board of Trustees was enabled to supply those needs and begin the fitting up of a Biological Laboratory. The comparatively simple appliances of this laboratory have been of the greatest benefit to the students in biological branches.

When I assumed the position of instructor in Biology and Geology, I found no provision for the method of study known as the "laboratory method." It was my first aim to provide for the wants of the class which began the study of botany. To that end I recommended the purchase of a number of simple microscopes for the use of this class. In accordance with this recommendation eighteen of the Bausch & Lomb Optical Company's "Compact" dissecting microscopes, furnished with $\frac{3}{4}$ and $\frac{1}{2}$ inch single lenses and nickeled pliers, were purchased. This number allowed the class to work in two sections, and in the spring of that year each member of the class of '84 spent three hours per week in laboratory work, dissecting and describing the common wild plants which flower in April, May

and June. Each was required to answer in full the following questions, upon a blank* provided for the purpose, in regard to any twenty-five species of uncultivated flowering plants which he could find:

1. Is this FLOWER complete?
 - a. Is it regular?
2. Is the CALYX gamosepalous or polysepalous?
 - a. If gamosepalous, describe its tube and border.
 - b. If polysepalous, give number and shape of sepals.
3. Is the calyx free, or is it adherent to the ovary?
4. Is the COROLLA gamopetalous or polypetalous?
 - a. If gamopetalous, describe its shape.
 - b. If polypetalous, give number and shape of petals.
 - c. To what is it adnate?
5. How many STAMENS?
 - a. Are they distinct or united? If united, state how?
 - b. To what are they adnate?
6. ANTHERS.
 - a. Of how many cells?
 - b. Are the anthers innate, adnate, or versatile? Introrse or extrorse?
 - c. Their dehiscence.
7. FILAMENTS.
 - a. Shape, and relative length.
 - b. Note any peculiarity of the connective.
8. PISTIL.
 - a. Apocarpous, or syncarpous?
 - b. Of how many carpels?
 - c. Describe stigma and style.
 - d. How many cells has the ovary?
 - e. Describe the placentation.
9. OVULES.
 - a. Number.
 - b. Are they horizontal, ascending, erect, pendulous or suspended?
10. FRUIT.
11. SEED.
 - a. Describe shape and outer integument.
 - b. Describe the embryo and albumen.
 - c. Are they anatropous, amphitropous, campylotropous, or orthotropous?

*This blank, with its questions, is the same, with a few improvements, as that used in the botanical laboratory of Harvard University.

Construct diagrams to exhibit the relations of all the parts of the flower.

N. B.—Indicate the aestivation, and note the position of subtending bract, Describe the inflorescence and bracts.

LEAVES: Describe their arrangement, venation, shape (including apex and base), margin, and surface.

Describe the petiole and stipules.

Describe the structure, direction, and general character of the STEM.

Besides this, each was required to determine the ordinal, generic and specific names of fifty additional plants. This small beginning was the inauguration in Purdue University of the laboratory method as applied to the biological studies.

In June, 1881, a recommendation for the purchase of a number of compound microscopes was sent to your office. The purchase was ordered by the Board, and after investigation of the merits of various stands, the "Economic" microscope of R. & J. Beck, London, was selected as being, for the price, best adapted to our needs. These stands are furnished with 2 inch and $\frac{3}{4}$ inch eye-pieces, $\frac{3}{4}$ inch and $\frac{1}{2}$ inch objectives, camera lucida and nicked steel, curved forceps. In August, sixteen of these stands, thus equipped, were imported free of duty. By this purchase, at the beginning of the school year, 1881-2, we were enabled to introduce into the course the study of Biology by the Freshman class, as a foundation for the Botany and Zoology which follows it. As that class was unexpectedly large it became necessary, on account of the limited number of instruments, to divide it into three sections. Each student spent somewhat more than three hours per week in microscopic work, following as nearly as possible the directions in Huxley and Martin's Elementary Biology. (During the present term the Biology class has spent five hours per week in microscopic work.) In the same term the Sophomore class ('84) spent the first twelve weeks, five hours per week, in the study of the tissues of phanerogamous plants with the microscope. During the last four weeks of this time they devoted their entire time to the preparation of theses. To each was assigned a potted plant and he was required to make a careful study of the various tissues and prepare a thesis illustrated by at least ten drawings, made with the camera. Throughout the succeeding terms the class in Botany pursued essentially the same

course as that of the preceeding one as far as the study of the gross anatomy of plants is concerned, with the addition of a brief study of Histology.

From the fact that a change had been made in the course of study, no Zoology was taught in 1881-2. During the present term the laboratory method has been applied to the teaching of Zoology. The pupils were required to purchase a set of dissecting instruments in lieu of a text-book, and at tables and over dissecting pans, provided for the purpose, practical work in the study of the anatomy of some typical animals has been carried on. Students have dissected the mussel, crawfish, fish (sucker), frog, and pigeon. In all of these they have studied the digestive, circulatory, respiratory, reproductive and nervous apparatus, skeleton, and muscular system. The parts of the brain and general arrangement of the nervous system have received especial attention, with the confident expectation that the students will derive great assistance from this knowledge when they attempt the study of the mammalian and human brains.

I am glad to be able to report that the practical working of the laboratory plan has been fully as satisfactory as the present equipment would warrant me in expecting. The students are generally enthusiastic and many of them give extra time to their work in this laboratory, not because more work is assigned than they can complete in the allotted time but because *they like it* and do *more* than is required. Of course the laboratory work is supplemented in other ways. In some branches this is done by lectures and in others by text books. In all, there are references to standard works in the library which treat of the subjects studied. Students are also recommended to purchase one or more books of reference in those studies in which the instruction is by lectures. Reports of laboratory work and frequent quizzes test the progress the student is making.

Some of the appliances for teaching have been enumerated in speaking of the methods of instruction. As additional apparatus, may be named a fine projecting lantern with microscope attachment, for which a Brush Automatic Electric lamp furnishes the light; a series of slides (over 300) illustrating various points in Physiology, Zoology and Botany; a set of charts

illustrating Plant Anatomy, and a number of *papier-mache* models of parts of the human body. Everything above enumerated has been purchased within the last two years.

The additions to the Museum since my previous report have been as follows;

1. *The Gardner Collection*.—This collection, gathered by the Hon. Jos. Gardner, of Bedford, Indiana, embraces several thousand species of shells, minerals, and fossils. Most of these have been unpacked and shelved in our Museum, but some are still in the boxes, for want of time to arrange and space to show them.

2. *The Smithsonian Institution's Donation*.—These are a set of Atlantic and Pacific coast fishes, preserved in alcohol, many of them being type specimens, and 144 species of marine (Atlantic) invertebrates, collected by the United States Fish Commission.

3. *The Census Bureau's Donation*.—This is a collection of about 250 species of woods from various parts of the United States, gathered and distributed by the Forestry Department of the Census Bureau.

4. Many zoological specimens have been added by collection and purchase. Among the chief additions by purchase is a series of skeletons, illustrating the osteology of the various classes of Vertebrates and orders of Mammals, from Ward's Natural Science Establishment, Rochester, N. Y.

5. More than 100 species of plants have been added to the Herbarium, by collection and exchange.

In conclusion, I would ask your earnest attention to the following brief statement of the urgent needs of this Department, in order that its efficiency may be continued and increased. By making this statement brief, I desire to emphasize its importance, and I am sure that you will recognize the *urgency* of the needs when they are thus presented.

1.—*We Need a Curator of the Museum.*

Our collections are getting large and need constant attention to prevent their deterioration.

Some of them are *entirely* unclassified and others only partially arranged. This work can only be done satisfactorily by some one who could devote his time to the work.

The Museum needs a catalogue to facilitate the finding of specimens. If our collections were perfectly classified and catalogued, their value would be fully doubled.

Our collections in all branches need to be increased. That goes without saying. It is equally patent that this can be done most rapidly and effectively by some one whose *business* it is.

The Professor in charge has not time to attend to these matters, except in the most indifferent way, *without neglecting or slighting the more important work of class instruction.*

There is an abundance of work to keep one man busy in performing the duties above indicated, and preparing material for the laboratory work of the classes.

I trust, therefore, that at an early day we may be able to employ some one who can take charge of the Museum, and thus relieve me of much manual labor and afford more time for better class-work.

2.—*Our Apparatus Needs to be Increased.*

We need more microscopes. The present number, being only sufficient to supply one-half or one-third the classes who use them, necessitates the division of the class into sections and doubles or trebles the amount of instruction and supervision.

We need more slides, both for the microscope and lantern, for illustration of lectures. For example: There are many types of animals which are not accessible to our students, and others which they have not time to dissect. In such cases carefully photographed slides are a great assistance to the understanding of the structure of such animals. Microscope slides with carefully prepared objects are still more instructive.

We need better appliances for the study of Zoology. Before the beginning of next year a room ought to be fitted up especially as a Zoological Laboratory and well provided with water, tanks, sinks, pans, trays, etc.

3.—*The Reference Books in this Department should be Increased.*

At present we can do comparatively little in referring our students to original works. For example: In a recent work

entitled "Anatomical Technology," by Profs. Wilder and Gage, of Cornell University, there are 322 distinct books and papers referred to. Of this number our library has *thirty-eight*. The single illustration is enough.

In conclusion, allow me to say that I have been very much gratified with the progress we have been able to make in the past two years through the liberal appropriations to this Department. They ought by no means to be decreased, but rather increased. We have only begun the building up of a department of Natural History. We have now laboratories of which we need not be ashamed; I trust we shall soon have such that of them we may justly be proud.

Very respectfully submitted,

CHARLES R. BARNES,

Professor Natural History.

November 30, 1881.

DEPARTMENT OF INDUSTRIAL ART.

To the President of Purdue University:

Since the last biennial report from this Department, additional desks have been provided for several of the rooms, so that in the large lecture and recitation room fifty-four students can now be accommodated at the same time. The desks in this room are placed upon raised platforms in semi-elliptical tiers, in such a manner as to render it probably the best adapted for model drawing and shading for large classes of any drawing room in the West, if not in this country.

The cast drawing room, and the mechanical drawing room, will now each furnish sittings for six students. The clay modeling and wood carving rooms will accommodate about one dozen students each.

APPARATUS.

Besides the desks mentioned above, a considerable addition has been made to our apparatus in the way of geometrical models for object drawing. These models were made by students in the mechanics' shop, after designs furnished by this Department. They are so contrived as to enable us to build up almost an infinite number of groups, and it is believed that no more complete set of geometric drawing models can be found in this country.

Prang's charts for building construction, advanced machine drawing and Sepia drawing have also been added to the drawing apparatus. Valuable works on industrial art have also been added to the library.

COURSES OF INSTRUCTION.

In the Academy the course of instruction is about the same as it was two years ago, consisting of free hand from copy, dictation, memory, design, and model or object drawing. The instruction is given from the blackboard, and from charts prepared for the purpose, by the assistant in this Department, Miss Jessie F. Thompson.

COLLEGE CLASSES.

Freshman.

In the Freshman Class the instruction is about the same as at the last report, except a little change in the order of subjects. The course as now pursued is as follows:

First Term.—Geometrical Drawing, four weeks, in which time about one hundred problems are solved with ruler and compass, the instruction being given in the form of blackboard lectures.

About nine weeks of this term are occupied in the solution of over one hundred problems in Orthographic Projection (commonly known as the making of plans, elevations, sections and other “working drawings”), including the development of surfaces, the intersections of surfaces with cutting planes and with each other.

The balance of the term, about three weeks, is given to the solution of about thirty problems in Isometric Projection. Both orthographic and isometric projections are taught by lectures, from the objects, blackboard, and charts made for the purpose.

Second Term.—This term is entirely occupied with Scientific Linear Perspective, including parallel, angular, and oblique. The pupils are taught practically how to put into perspective the various geometrical forms under given conditions of size, distance, position with reference to the spectator, and position with reference to both picture and ground planes. The instruction is given by lectures illustrated from the blackboard and charts.

Third Term.—The third term is taken up with Model and Object Drawing in outline. The course begins with the draw-

ing of such objects as the sphere, circle, cylinder, cone, vases, crockery-ware and such common objects as illustrate the circle seen obliquely. The work is continued by the drawing of the cube, square, triangular and hexagonal prisms, crosses, skeleton cubes, cubic sections and many groups of objects made up of the previously drawn solids above mentioned. The application of the drawing of these solids to the drawing of irregular objects, as chairs, tables, desks, sofas, buildings, interiors, etc., is also shown.

Upon the completion of any of the preceding subjects the students are required to pass an examination. The following questions, used at a class examination, will indicate about what is required in each subject.

GEOMETRICAL DRAWING.

1. Construct a triangle whose sides shall be three, two and a half, and two inches respectively, in length.
2. Construct an isosceles triangle whose base shall be one inch and the altitude two and a half inches.
3. Construct an irregular polygon equal to a given irregular polygon.
4. Draw any triangle and circumscribe a circle about it.
5. With a radius of one and one-fourth inches construct a semi-circle and within it inscribe a square.
6. Construct a square, each side two and one-half inches, and within it inscribe a regular octagon.
7. On a base of one and one-half inches construct a regular pentagon.
8. Within an equilateral triangle, each side three inches, inscribe three equal circles so that each circle shall touch two others and two sides of the triangle.
9. Within a circle, three inches in diameter, inscribe five equal circles, so that each circle shall touch the given circle interiorly and two others exteriorly.
10. Construct an ellipse with a long diameter of three inches and a short diameter of two inches, by means of intersecting arcs.

ORTHOGRAPHIC PROJECTION.

1. A wire, four inches long, projects from a vertical wall at sixty degrees to its surface and parallel with the horizontal plane. Give the plan and elevation.

2. Give the plan and elevation of a right triangular prism when resting on one of its rectangular faces, the surfaces of the triangular ends being at fifty degrees to the vertical plane. The ends of the prism are equilateral triangles of three inches edge and the length of the prism six inches.

3. Give the development of the above prism.

4. Give the plan and elevation of a regular hexagonal pyramid when two of the edges of its base (each side one and one-fourth inches long) are at twenty degrees to the vertical plane, the altitude of the pyramid being six inches.

5. Draw the elevation and plan of the same pyramid when lying on one of its triangular faces, with its axis parallel with the vertical plane.

6. A circular plane or disc (one and one-fourth inches radius) stands so that one diameter is vertical and another diameter at right angles to the first, is at fifty degrees to the vertical plane. Give the plan and elevation.

7. A pipe, two inches square, is penetrated by another, one inch square. The smaller one passes through two sides of the larger, their axes intersecting at right angles to each other. Give the elevation and plan when two faces of each pipe are parallel with the vertical plane.

8. A cube of three inches side, stands on the horizontal plane with four of its faces making angles of forty-five degrees to the vertical plane. On this cube stands a pyramid, three inches square at the base and three inches high, its axis over the center of the cube and two edges of its base parallel with the vertical plane. Give the plan and elevation.

9. Draw the shape of the piece of metal to form a gas or lamp shade, ten inches wide across the circular base, three inches across the top and five inches in vertical height.

10. There are four cannon balls two inches in diameter. Three of them are resting on the horizontal plane so that their surfaces are in contact. The fourth ball rests on top of these

three and is in contact with them. Give the plan and elevation when the centers of two balls, resting on the horizontal plane, are in a straight line parallel with the vertical plane.

ISOMETRIC PROJECTION.

1. Define isometric projection.
2. What lines in an isometric *projection* of a cube show their real length? What lines are diminished?
3. What lines in an isometric *drawing* of a cube show their real length? What lines are increased?
4. How do you define the direction of the light in isometric drawing?
5. Draw an isometric cube, with a square *recess* in the *top*, and a square *tablet* on the left side.
6. Construct the shadow (*a*) of vertical line on a horizontal plane; (*b*) of a horizontal line on a vertical plane.
7. Having given a circle with a *circumscribed octagon* and an *inscribed hexagon*, to construct the isometric drawing of the same.
8. A vertical square beam, one inch in section, and three inches long, stands on a horizontal plane. Make an isometric drawing and find its shadow.
9. Make an isometric drawing of a right cone four inches in diameter at the base and eight inches high when standing on the center of a plinth six inches square and two inches thick.
10. Make an isometric drawing of a square pyramid of four inches base and eight inches high, when standing on a horizontal plane, and find its shadow on that plane.

PERSPECTIVE.

1. What is meant by the field of vision?
2. What is the picture plane? Ground plane?
3. What is the center of view? The station-point? The distance-point?
4. What are vanishing points? Measuring points?

Scale one-third inch equals one foot; horizontal line equals seven feet; station-point, twenty-one feet.

5. Five feet to the left of the station-point and touching the picture plane, is the nearest point of the top of a circular well, six feet in diameter, on a level with the ground. Draw a circle to represent the top of the well.

6. Eight feet to the left of the station-point, at right angles to and touching the ground plane, the picture plane, and the left side of the well, is a circular cover for the well, of the same size as the top of the well. Draw a circle to represent the cover.

7. Four feet to the right of the station-point, and four feet within the picture, is the nearest angle of a plinth, six feet square and two feet thick, lying on the ground so that its rectangular faces make angles of forty-five degrees to the picture-plane, right and left. Give the perspective view.

8. On this same plinth stands a pyramid four feet square at the base, and ten feet high, its axis coinciding with the center of the plinth, and the edges of its base being parallel with, and equally distant from, the edges of the plinth. Draw it.

9. Six feet to the right of the station-point and four feet into the picture, is the nearest angle, on the ground, of a rectangular prism twelve feet long and with bases six feet square. Its twelve feet edges vanish upwards to the right at an angle of forty-five degrees to the ground, its horizontal edge on the ground vanishes toward the left at an angle of forty-five degrees to the picture plane, and the oblique edges of the bases vanish below the horizon at an angle of forty-five degrees. Draw the prism in that position.

10. Draw the axis of the prism and measure the distance of its upper extremity from the picture plane and write the answer in feet and inches.

SOPHOMORE CLASS.

Near the close of the last school year the general course of study was so modified as to allow the Sophomore students to select drawing, two hours daily, in place of history. A little

more than half of the class have chosen drawing and are now making excellent progress. The course of study adopted for them is as follows:

First Term.—Light and Shade.

The geometrical solids previously drawn in outline in the Freshman year, are now drawn in shade, using different mediums, as the stump, the crayon point, pen and ink, the brush and India ink, neutral tint, monochrome, etc. The principles of light and shade are carefully explained.

Second Term.—Light and Color.

The analysis of light into its primary colors and the combination of these into secondary, tertiary, etc., together with the principles governing harmony and contrast as applied to decorative art in calico-printing, carpet and wall-paper designs, etc. Practice in the use of colors is given all through the term.

Third Term.—Historical Ornament.

The explanation of the elements or characteristics of the different styles of ornament as practiced in ancient, mediæval, and modern times. Also the principles of surface ornament as derived from this study will be pointed out. In connection with this study of conventional ornament, the botanical analysis and conventionalization of plants preparatory to their use in design will receive attention.

INDUSTRIAL ART COURSE.

At the close of the last College year it was also determined to arrange a course of study in applied Industrial Art, covering a period of two years, two hours daily, which should be an equivalent to the two years' course in Mechanics, or Agriculture and Horticulture. Although not strictly included in the time covered by this report, it may not be improper to say that a half dozen or more students are now pursuing this new course with much enthusiasm, and it is believed that it will prove an element of strength to the University. The course for this class, as laid down at present, is as follows:

First Year.—First Term.—Modeling in Clay.

A few geometrical solids are first modeled, followed by architectural ornaments, leaves, flowers, fruits, etc. The students are also taught how to model simple articles of pottery and decorate them with raised or sculptured ornaments. Also, ornamental tiles are made and decorated while in the green state. These articles are then burned in a kiln belonging to the University, or casts are taken in plaster of Paris.

Second Term.—Wood Carving.

At first the sharpening and proper use of tools are taught. Then diaper carving, incised carving, and low-relief carving are practiced as skill in the use of implements may permit. Simple pieces of furniture, as wall-pockets, picture frames, easels, music stands, book racks, easy chairs, etc., are made by the students in the mechanics' shop and carved by students in the Industrial Art course.

Third Term.—Wood Carving Continued.

During this term students have practice in medium and high relief and in "the round." The principles of decorative art as applied to sculptured ornament, as wood and stone carving, are explained, as well as the realistic and conventional treatment of natural forms as decorative elements.

Second Year.—First Term.—Flat Decorative Design.

The principles of flat or surface ornamentation are studied and designs for borders, designs for covering flat surfaces of indefinite extent, and designs to fill a geometric space are made by the students. Botanical analysis, conventionalization and historical ornament, as well as harmony of color will receive attention.

Second Term.

Methods of enlarging, reducing and repeating patterns, as well as processes of weaving and printing and the manner of adapting designs to different materials, and of adjusting patterns to the size of the blocks or rollers employed, will be explained.

Third Term.—Applied Design.

This term will be spent in making original designs for prints, carpets, lace, wall papers, oil cloths, tiles, Chinaware, etc.

WHAT IS INDUSTRIAL ART?

As there seems to be some confusion in the minds of the people as to the meaning of Industrial Art, a few words of explanation may not be improper. In the widest sense these words mean any art or business in which skill of hand is essential and by which one earns money. In a more restricted or technical sense it includes all kinds of mechanical drawing, whether machine or architectural, by which the intelligent workman is guided in his shop practice. It includes all kinds of engraving on wood, steel, copper, stone, etc. It includes all kinds of carving in wood, stone, marble, plaster, etc. It includes all kinds of decorative design, or ornament applied to objects to render them more beautiful or attractive.

It does not include what is called fine art, and yet it is difficult to draw the line between the two. In fact, fine art and industrial art overlap each other, and the elementary principles of each are the same.

One distinction between fine art and industrial art might be named. Fine art has a commercial value, but it is not counted generally among the necessities of life. On the contrary, industrial art, in such a state of civilization as ours, is an absolute necessity, and is no more to be ignored than hunger or cold. Nearly all of us, rich or poor, absolutely refuse to buy houses, stores, dress, furniture, carpets, cooking utensils, etc., that are totally devoid of ornament.

We say, then, industrial art has a money value in this country, that is probably as certain of a market as wheat or corn, and this commercial value of art is becoming greater and greater every year in the United States.

This being the case, every manufacturer who in the future would hold the trade of this country, and every workman who would obtain employment, must not only make his wares strong and substantial, but he must ornament and beautify them. He must not only be able to perceive the difference between beauty and ugliness, but he must know why an object

is beautiful, so that he may produce beauty at will. Good taste is not sufficient. Knowledge alone can direct us. Industrial art knowledge, then, is riches to the individual who practices it, and wealth to the State that fosters it.

OBJECT OF THE SCHOOL OF INDUSTRIAL ART.

Our first and main purpose in the art courses is educational. It is our purpose to train the mental faculties, to form the judgment, and hence to strengthen the whole mind. We make drawing a part of general education, and justly so, for when properly taught, it is as beneficial for general educational purposes as other departments of learning. Besides all this, we claim that no knowledge is more practical. The eye and the hand are educated as well as the mind. Proper art instruction gives this practical education of the eye and the hand, "not as a substitute for intellectual analysis and synthesis, but in addition to them," which is so much more in its favor.

Another object of scarcely less importance, is the production of educated workmen, artisans who can produce here in the State of Indiana the art goods that the people of this State will and must have. Instead of sending our raw materials to the Eastern States, or even to other countries, as we sometimes do, to be wrought into objects of service and beauty, we ought to do this work at home. Hundreds of thousands of dollars are annually sent out of the State for articles that we do not make but might make if we knew how. We ought to educate our workmen so that they can compete with the world in artistic productions of any kind.

When viewed in this light, Industrial Art education can not be treated with indifference, as one belonging to the mere elegancies of life. The fact is, "we are in the midst of an universal and unexampled strife," and we must lay hold of and appropriate every legitimate element which can advance our wisdom or our wealth. We must make art education general. No one can scan the future, but art knowledge is as likely to be as necessary for our success, in our advancing civilization, as any other.

At no former period in the history of this country has the public mind been so turned toward industrial art. European

countries have been aroused to the importance of this subject for twenty-five or thirty years. The Eastern States of this country have realized its importance for the last ten or fifteen years, and now is the time for Indiana to take her proper rank among her sister States in encouraging art education, which will surely enhance the wealth of the State, as well as ennoble the feelings, refine the taste, and contribute to the mental and moral welfare of her people.

We can not ignore art influence if we would. Art productions meet us at every turn in our daily life. They confront us in the parlor, on the street, in the shop or storehouse, and in all our business transactions. We can not avoid contact with them. We can not avoid exercising our judgment concerning them either in selecting or rejecting them, whether we produce such works ourselves, or purchase them of others, or only make merchandise of them.

Owing to this art atmosphere, productions of every kind are made to bear an art impress. Manufacturers, in all departments, vie with each other in producing, at any cost, objects or fabrics of value and taste. Our streets are becoming rows of palaces in magnitude, if not in commensurate beauty. Every addition to our light or grave literature demands the service of art to insure its welcome, or to aid in giving lessons of wisdom and truth.

WANTS.—AN INDUSTRIAL ART MUSEUM.

Two years ago we asked for the establishment of an Industrial Art Museum, as being indispensable to the highest success of the School of Industrial Art, as well as of the School of Mechanics. We are still of the same opinion, and would urge more strongly than ever that an immediate beginning be made. We can not long compete with the technical schools around us without such a Museum. Several of our best students have gone to other schools of art because we could not furnish the art *surroundings* that are so necessary for success in this kind of work.

Massachusetts has a very extensive museum, of both industrial and fine art, at Boston. Pennsylvania has two at Philadelphia, one, at least, largely industrial and enriched by many rare pieces of workmanship from the Centennial Exhibition.

New York has two or more that are already large and still growing, open to the inspection of practical workmen. Washington City has its Corcoran Art Gallery. Other collections in the East might be mentioned, but some of our nearest State neighbors are also in advance of us in this matter. Cincinnati has over \$300,000 in hand, and is now establishing an Art Museum, worthy of the Queen City. Prof. Ives, of St. Louis, two years ago, visited Europe, where he purchased a large collection for an Art Museum at that place. Chicago, in the Exposition Building, has a permanent collection which is growing from year to year. The Industrial University at Champaign, Ill., one of our nearest rivals in industrial education, has a very useful and attractive Museum of Art.

A museum, containing specimens of artistic workmanship, would be of great use to the students in Mechanics as well as those in Industrial Art, and so long as these advantages are found at other institutions, we shall compete with them to our disadvantage. If our State Legislature would make a suitable yearly appropriation for a time, until we can educate the people to see the money value of Industrial Art Education, some wealthy citizen of the State might, in time, perpetuate his good name, as well as confer a lasting favor on his fellow citizens, by such a donation as would endow a museum of art, perhaps of fine art, as well as industrial art, in connection with Purdue University.

Let it be kept in mind by the practical men of our Legislature, that Purdue University is the college of the laboring man, and that everything that can help him to ennoble and dignify his labor should be freely granted and centered about this Institution. The State, whose wealth has been created by labor and industry, should contribute a portion of that wealth to build up at least one institution where the industrial and mechanical arts may be scientifically and practically taught.

CONCLUSION.

I ought not to conclude this report without thanking students, and all in any way connected with the success of the School of Industrial Art, for their uniformly kind and deferential treatment. No part of my life's work thus far has been

more pleasant than my connection with Purdue University, although at times it has been somewhat laborious.

The number of students in the regular classes has never been so large as at present, and, as one consequence, the instruction is better systematized and the enthusiasm increased. On the whole, the prospect of this department looks bright to us, if we are only furnished with means by the action of our State Legislature, shortly to be convened. The last Legislature showed a kindly disposition towards us, and we can not doubt that the coming one will be even still more disposed to encourage us.

Respectfully submitted,

L. S. THOMPSON,

Professor of Industrial Art.

INDUSTRIAL ART ROOMS, Nov. 15, 1882.

DEPARTMENT OF MATHEMATICS.

President E. E. White, LL. D.:

I have the honor to submit the following report of the condition and work of the Department of Mathematics, for the academic year ending June, 1882:

The Freshman class matriculated forty-five. It was taught in two divisions. This enabled the instructors to give closer attention to individual needs of the students than is practicable in large classes. The students lacking the previous preparation which would fit them for the work, were soon discovered and dropped from the class. The work done by those remaining was most satisfactory. The year, except six weeks at the close of the spring term, was devoted to geometry. The completion of the subject in one year secured the continuity which is absolutely necessary in the study of the mathematics. While the logical demonstration of each theorem was required, the mathematical accuracy of each figure was also insisted upon. Practical applications of the principles were combined with daily work in class, by means of problems in mensuration, and original demonstrations of theorems outside of the regular routine of text-book work. After completing the subject of geometry, six weeks were devoted to the higher algebra, as a preparation for entering more fully upon the subject at the opening of the next year.

The Sophomore class matriculated seventeen, thirteen remaining during the entire year. The class entered upon the study of higher algebra, having the preparatory drill, as indicated above. The first, and longest term of the year, extending to the holidays, was given to this subject. The method adopted in the solution of higher equations, may be styled the

graphic, since the solution was accomplished by the construction of the locus of the equation. Trigonometry, followed by surveying, occupied the remainder of the Sophomore year. The students were made familiar with the use of the theodolite and took their own notes for class room work. Lands were surveyed and plots made. Distances were first measured by the instrument and the results were afterward verified by chaining. The ladies were taught to do their own triangulating, reading angles and measuring base lines with chain or tape; though they were excused from the hardest field work. The surveying was done with an excellent transit instrument, with compass attached. The Professor and his assistant were in the field from three to four hours daily, until the students were able to do the work unassisted. The work in surveying has always been satisfactory, and several of the students have obtained employment as surveyors. Three have been elected county surveyors. One, Mr. Mead, has been called to the Chair of Mathematics in the Agricultural College of Colorado.

The Junior class devoted the first half of the year to analytical, or co-ordinate geometry. In teaching this subject the lecture system was more largely introduced than in either of the lower classes. The investigations of the Professor on collateral subjects were imparted to the class. The students were required, almost daily, to construct by scale the geometrical figures representing the results of their solutions. Astronomy, pursued during the latter half of the Junior year, was as comprehensive and practical as the time and appliances would permit. Students were taught the use of the telescope, so as to make observations without the aid of the Professor in charge, and were encouraged to seek opportunities for more extensive investigation. The number at the beginning of the year was nineteen, at the close sixteen.

The studies of the Senior year being elective, two entered upon the study of the calculus. Both were admirable students and their work was in the highest degree satisfactory.

APPLIANCES AND WANTS.

The Department is furnished with a celestial globe twenty inches in diameter, and a terrestrial one of the same dimensions.

An excellent engineer's level and an instrument combining in one a surveyor's compass, a transit, and a theodolite, equip the surveying classes. The Department is supplied with a telescope (made by Alvin Clark & Sons, Cambridge, Massachusetts,) with an aperture of four and a half inches, and a focal distance of six feet. This instrument shows the belts and satellites of Jupiter, and the rings of Saturn. It also resolves many of the double stars and the principal nebulae. Charts prepared by the Professor illustrate the higher mathematics.

Owing to the increased number of students, another transit, two Gunter's chains and a reading rod are required. A spherical blackboard is desired for the use of the classes in trigonometry and astronomy.

Respectfully submitted,

D. G. HERRON,

Professor of Mathematics.

DEPARTMENT OF ENGLISH AND HISTORY.

President E. E. White, LL. D.:

SIR—I herewith present the report of the department of English and History, for the college year, ending June 30, 1882.

It has been one year since the establishment of this Chair; and the wisdom of the Trustees in making this a special part of the instruction in the University is already manifest. It was with some difficulty that the course, as marked out, could be fitted into the general course in science; but the success of this experimental year has been such as to give promise of something better in the future.

The Freshman class was heard in a weekly recitation in English composition, throughout the year. This work was largely by lectures, placing upon the board the outline or diagram of each day's work. Careful attention was first given to the mechanical part of composition. There followed this a drill upon the writing of letters, in their varied forms. The frequent writing and correcting of compositions, by the students, was required throughout the year.

History is taken up in the Sophomore year. The basis of our historical work is found in Thalheimer's Ancient, Mediæval, and Modern histories. Topics of special interest are assigned to the students, upon which they write. These historical essays and biographies are read in the class, after which free conversation and discussion are allowed. Part of the historical instruction is by lectures. This is especially true in some parts of Roman and Mediæval history.

The first term of the Junior year is devoted to Rhetoric. The pupils first become familiar with the figures of speech, and then they are called upon to compose or select examples, illus-

trating these various figures. After this, some standard poems are taken up, and a careful rhetorical analysis of them is made.

The Senior class receive additional instruction by weekly lectures. This supplemental work is designed to give a brief outline of all the leading literatures of the oriental and classical nations.

We really need large additions of books for this new department. Our list of historical books needs to be largely increased, and in the line of English literature we have scarcely a beginning.

There is also greatly needed, to facilitate the study of history, a series of large wall maps.

It is confidently hoped that this department will become a prominent feature of the University.

All of which is most respectfully submitted.

JOHN A. MAXWELL,
Professor of English and History.

DEPARTMENT OF LATIN AND ELOCUTION.

President E. E. White, LL. D.:

DEAR SIR—I have the honor to present the following report concerning the work in the department of Latin and Elocution, for the year ending June 8, 1882:

LATIN.

This study has been pursued by three classes, the Freshman, Sophomore, and Junior. The work of the Freshmen was confined to the grammar, reader and a few chapters of Cæsar. The Sophomores continued the translation of Cæsar and read three of Cicero's orations. The attention of the Junior class was directed to Virgil, and to Latin Prose Composition, which latter exercise was pursued by all the classes. It is expected that, in future, the Junior class will read Cicero's *De Senectute*, as well as several books of Virgil. All of the members of the present Junior class have expressed a desire to continue this study through the Senior year, when an opportunity is offered of reading Livy, Horace, and Tacitus.

As Latin is one of four studies pursued by the student at the same time, it is not possible that so much can be accomplished in this department as in schools where the classics hold a chief place. Yet, in our four years' course, the students will, undoubtedly, gain a fair acquaintance with the best Latin authors and acquire the ability to pursue by themselves the reading of Latin literature. It is, however, as a means of mental training and as a most important factor in the study of English that the study will here be found to be of the greatest value;

and these ends are held prominently in view during the whole course of instruction. It is evident that no course of education can be considered successful which fails to enable the student to use his mother tongue with facility and correctness. The study of English grammar, as a sole means to this end, is an acknowledged failure. Rhetoric, composition, and English literature have each its own place, but Latin furnishes invaluable assistance in this work. In the translation of history, orations, poetry, and essays the student must employ a vocabulary far more extensive than is required for the ordinary expression of his ideas; and words once used by him in translation are his own for future service, in a sense far more complete than when read in the writings of another. Inaccurate expression is a very general fault. Not only are grammatical errors frequent, but failure to apprehend the true meaning and right use of words is apparent. Every Latin recitation is a practical lesson in English language. Delicate shades of meaning and nice distinctions of synonyms are observed, while good idiomatic English is always required. A knowledge of the relations of words, and the dependence and force of clauses necessary to a right understanding and correct rendering of the Latin, throws much light on the structure of English sentences, where the absence of terminational inflection mars the nicety of expression and permits inaccuracy of thought. In a language where the change of a single letter alters the entire construction of a sentence, much closer observation is demanded. Careful attention to forms becomes habitual and is of material service in correcting the heedless method of reading English which gives rise to the poor spelling everywhere so common. To cultivate habits of observation and accuracy in one department is to exert an influence on the character of the greatest value in practical affairs. The power of judgment and ready inference receives continual exercise in this study, to a degree unequaled elsewhere; and it is these qualities of observation, accuracy, judgment, and ready inference which are the most essential elements of success in any trade or profession. Furthermore, to the scientific student especially, a knowledge of Latin roots and terminations is of great practical value. Could the study commence at an earlier point in the course, its beneficial results would be still more apparent.

ELOCUTION.

In the department of Elocution, one lesson a week has been given to each of the two higher classes. Only simple elementary work has been attempted, as here there was much to be accomplished. It is clear that nothing is a more obvious element of culture than the correct pronunciation and clear enunciation of words. Side by side with the use of language should be taught the proper utterance of language, yet no branch of education has been so sadly neglected in the common schools. All must agree that it is of the first importance that a man should be able to pronounce correctly the common words of his own language; for twenty hear a man speak where one sees his writing. The use of *fax* for *facts*, *calkerlate* for *calculate*, *feller* for *fellow*, and a hundred other errors, far too common, should certainly be avoided by our college graduates.

A distinct, accurate, and full utterance of the appropriate vowel and consonant-sounds in their various combinations in language, the correct accent of words, the right use of the voice, and variety and appropriateness of inflection, whether in reading or conversation, are the first objects sought. Some training is also given with special reference to oratory, and the system of gestures is taught which is employed by Prof. Kelley, of Boston, the foremost among the many excellent elocutionists in the East. Many hours have also been devoted to the private drill of students preparing for commencement or society entertainments. The course of study is designed to extend through two years; and, where the instruction is supplemented by the earnest co-operation of the student, it is believed that results will be obtained of no less value than those derived in the other departments of instruction.

ANNIE S. PECK,

Instructor in Latin and Elocution.

THE UNIVERSITY ACADEMY.

President E. E. White, LL. D.:

DEAR SIR—I have the pleasure to submit my third biennial report of the condition, course of work, and needs of the Academical Department of the University.

CONDITION.

During the six years of the Academy's existence its average attendance has been one hundred and fourteen. The present Fall enrollment of sixty-one, indicates a probable attendance the present year of one hundred. As there has been a decrease in our numbers the past year and the present, whereas there was a steady increase during the first four years of my management, it may be proper to state that it is due to several causes: (1) Raising the grade of work required of those entering our classes. (2) Requiring an examination of *all* who have applied for admission, instead of only those desiring to take our second year's work, as heretofore (twelve or fifteen applicants being rejected this Fall). (3) The suggestion made to County Commissioners to send, as far as possible, as appointed students, those prepared to enter the Freshman class.

The Academy has lost nothing, however, in the grade of the work done or in the character of its students. The present term has opened with more quiet, steady, and earnest work than ever before. The general deportment of the students is orderly and courteous. So far, no severe discipline has been required, and, with a few exceptions, none of any kind has been felt necessary.

CHANGE IN THE COURSE OF STUDY.

Descriptive Geography has been omitted from our course of study. The curriculum for the *first year* requires work in Arithmetic to commence at percentage and to be finished in a term and a half, instead of in three terms as heretofore. Physiology, United States History (formerly in second year course), the science and art of Reading, English Grammar (in which both composition and analysis enter as prominent features), Drawing and Penmanship, or Book-keeping, together with Arithmetic, above mentioned, complete the first year's course of instruction.

In the *second year's* work are given Complete Algebra through quadratic equations, Physical Geography, Civil Government (recently added), English Analysis, Elementary Rhetoric (recently added), the study of Authors, Drawing or Book-keeping.

None of our students are permitted to take more than four branches of study, as we find such a plan sacrifices quality for quantity of work done.

MEANS OF ILLUSTRATION.

For the purpose of aiding in imparting instruction, the Academy is provided with the following apparatus: (1) A reference desk containing one hundred dollars' worth of cyclopædias and dictionaries, to which the students can go at any hour of the day. (2) A complete set each of Mitchell's descriptive and Guyot's physical maps of various sections of the world. (3) A complete set each of Cutter's Human, and Human and Comparative, anatomical charts. (4) Various other wall charts and maps, together with a large globe, metric apparatus, and four microscopes. (5) Eight or ten dozen photographic slides—a part of which are original—for use with the projecting lantern. (6) An articulated human skeleton. (7) The skull of a child, cut away on the jaws, to show first and second dentition. (8) A *papier-mache* model of the abdominal cavity; all parts removable. (9) A similar model of the human arm, taken off at the shoulder, showing muscles, ligaments and arteries. (10) And a similar model of the thorax, opened, lungs separable, heart removable and separable. To these we purpose adding other means of illustration during the present

year, so that, with the aid of the University library and of the apparatus of other departments, our students enjoy unusual advantages for acquiring full and practical knowledge in the various branches of study pursued.

WORK ACCOMPLISHED.

During the six years of its existence *six hundred and eighty-eight* students have entered the classes in the Academy—two hundred and seventy in the past two years—classified as follows:

Year.	Second Year.	Irregular.	First Year.
1876-77	28.....	(not classified)	51
1877-78	29.....	27.....	45
1878-79	35.....	36.....	48
1879-80	48.....	26.....	45
1880-81	57.....	26.....	58
1881-82	48.....	43.....	38
Totals.....	245.....	158.....	285

Of those in the second year and irregular classes, *eighty-nine* have entered the College, about *one hundred* have been or are now teaching in the common schools of the State, and the remainder are mostly in business of various kinds, though a few have fallen asleep. It is pleasant to us to know, in these years of association, that so large a spirit of genuine, earnest manhood and womanhood has been exhibited by our young people, boding much good to the great commonwealth of which they have become citizens.

So far as the special features of the work we are now doing are concerned, we may mention that close attention is paid to the construction of the English sentence and to the art of composition, as we find our students are usually very defective in these particulars when they come to us. Direct, interesting, and practical information concerning our best American writers and their works, including analyses of both their lives and their productions, is obtained as part of the course in English. The work in Arithmetic is made of a practical character by the selection and the formation of such problems as

are likely to meet the student in actual life, and by frequently requiring them to take measurements and to form original problems.

Civil Government has recently been added to our course of study, the aim being to give its substance as applicable to the duties of citizens more than its mere outward forms. Our excellent appliances enable us to make the instruction in physiology highly interesting and profitable, a considerable portion of the time being devoted to the discussion of questions of hygiene.

A literary society—the Periclean—organized and officered by the students, gives opportunity for weekly drills in reading, declamation, debate, and the management of organized bodies of men.

OBJECTS IN VIEW.

The work in the Academy has been planned to meet a two-fold demand: (1) That of many young persons in various portions of the State who desire to prepare thoroughly for the Freshman class in the College, and lack such facilities for instruction near home as we have, the Academy thus forming that link between higher and common school education always contemplated by the State Constitution, and which the ultimate success of our public school system will require as a distinct feature here and elsewhere in the State. (2) That of that very large number of youth in various sections of our State who lack the means or the opportunity to complete a course in college, but who are eagerly desirous to be better prepared for entering upon their work in life than they can be by such instruction as can be received in the common schools with fifteen to twenty-five lessons per day, and without libraries, without models or the best maps and charts, without skeletons or casts, and without the splendid museum, art gallery, and chemical, physical, and mechanical apparatus as are open to their inspection and use in the University. A large amount of information, interesting, suggestive, and highly useful, is thus obtained here by observation of other departments associated in the general work of the University, even though they go not beyond the curriculum of preparatory studies. The good thus done, directly to these young people and indirectly to their

communities and the State, is incalculable. A feeling is gradually inculcated that industry is honorable, that it broadens into many channels of usefulness, that the work of the skilled hand can be made as beautiful and as worthy of admiration as that of the trained mind, and that the most sincere respect is due the earnest and careful physical laborers upon whose energy and ingenuity rest the commercial prosperity of their State.

INCIDENTAL.

The instruction in book-keeping has been rendered more easy and more attractive by furnishing the class-room with a full set of excellent tables. The interest in the study is strong and growing.

The needs of the Academy for the next two years will be mainly in the line of reference works, and of apparatus for illustration. These will not call for a very large outlay of money.

The reduction in the size of our classes, from thirty-five and fifty to twenty and twenty-five, will enable us to do much more satisfactory work.

THE DORMITORY.

The order in the young men's dormitory has been steadily improving. It is impossible to assemble fifty to eighty young men in one building for several months without there being more or less boisterous or noisy deportment at times. But the tendency has been steadily growing to confine this within innocent and reasonable limits, and to avoid injury to property.

It would conduce much to the peace and comfort of those in the dormitory if an arrangement could be made by which they would be more directly regarded as members of a family. I can not but feel that this locating of large numbers of young men in a building to themselves, with only such general oversight as Professor Goss and myself can give them, does not tend to elevate them in morals, in manners, or in religious culture.

Very respectfully,

E. E. SMITH,

Principal of the University Academy.

MILITARY DEPARTMENT.

To Dr. E. E. White, President of Purdue University:

SIR—I have the honor to submit to you the following report of the Military Department of Purdue University, for the year ending December 31, 1882.

I took charge of the Military Department, by authority of the War Department, in November, 1881, and since that time have given two days each week of the College year to it. The average attendance the first year was about thirty-five, and the interest exhibited by the students good and the progress fair, but owing to a number of disadvantages, not as great as it might have been. In September, 1882, there entered the Department twenty-two students, which number was increased to thirty by the middle of October. A number of students desiring to enter, were prevented by conflicting time of recitations and study. The uniform was changed from the old, slouchy uniform of grey pants and cap, and blue coat, to a neat, well-fitting uniform of dark-blue cloth throughout. The consequence has been to raise the *esprit* of the corps to a greater extent than ever before. The average attendance at drill is twenty-nine, and the drill itself has reached a point already equal to what it was at the close of last year. The spirit manifested by the cadets is soldierly and gentlemanly, all showing a disposition to obey every and all orders and directions given them, and anxious to learn. Owing to the drill-hall not being heated, the drill on the cold winter days must necessarily be abandoned, so the progress made during the winter term does not equal that made during the Fall and Spring terms.

After a careful thinking over the subject, and with an exper-

ience of several years as a Professor of Military Science, I respectfully offer the following recommendations for the advancement of the Department and the good of the College.

First. That the drill be made compulsory on the Freshman, Sophomore, and Junior classes, and all preparatory students over fifteen years of age. The principal good that the military drill and discipline does to the College, is to work off the surplus of animal spirits that exists in college students, and which otherwise shows itself in the innumerable college pranks and boyish behavior. Physically the drill is better in building up the form, in giving steadiness to the carriage and bearing than any other gymnastic exercise; while the military discipline teaches the idea of personal responsibility, and that the more of a gentleman one is the more of a soldier will he make. In other words, the Military Department is the governor of the College engine.

Second. The drill-hall should be heated, and fitted up with gymnastic apparatus, and some additional military stores, as officers' swords, flag, drums, fifes, and ammunition. The professor, in order to make his recitation room pleasant and instructive to the student, fits it up with maps, pictures, books, apparatus, etc. So, also, should the drill-hall be fitted up, that the drill may prove a pleasure, instead of an obnoxious duty to the student. Then it will increase and prosper.

Third. A code of regulations should be prepared governing the Military Department just as all military schools are governed.

I am, sir, very respectfully, your obedient servant,

WM. R. HAMILTON,

Second Lieut. Fifth U. S. Art.,

Professor of Military Science and Tactics.

DEPARTMENT OF ENGINEERING.

To Dr. E. E. White, President of Purdue University:

SIR—I have the honor to submit the following report of the Department of Civil Engineering of Purdue University for the term now closing:

The Department first opened in September, 1882. Several students presented themselves for admission, but owing to their not being advanced enough in mathematics, all were rejected but one. After mature deliberation and consultation with the President, it was deemed best to lay a few more foundation-stones in mathematics, before commencing the study of Engineering proper. The term now ending has been devoted to a study of descriptive geometry, shades and shadows, and linear perspective, with practical application of same, as shown by the drawings of problems, now in the hands of the President. The progress made by the one student is very gratifying. The middle term of the year is to be devoted to a study of "Strength of Materials," "Mechanics," as applied to strains materials are subjected to, and the practical application of the "Parallelogram of Forces." The last term will be devoted to Field Astronomy, Practical Field work, and Calculations. In view of the newness of the Department, I respectfully offer the following as the only and most important recommendation for its good:

That all students who intend to make a speciality of the study of Civil Engineering be first compelled to take a mathematical course of the following studies: Algebra, plain, solid and spherical geometry, descriptive geometry, analytical geometry, shades and shadows, linear perspective, trigonometry, surveying and mensuration, differential and integral calculus. The

Mathematical Department could doubtless be changed so as to embrace in the Freshman and Sophomore years the above. Two years, the Junior and Senior, then devoted to the study of Civil Engineering proper, both theoretical and practical, would be sufficient to graduate, as thorough students, as any polytechnic school in the United States.

I am, sir, very respectfully,

WM. R. HAMILTON,

U. S. Army Instructor in Civil Engineering.

December, 1882.

REPORT OF LIBRARY.

To E. E. White, President Purdue University:

I hereby present the following report concerning the condition and needs of Purdue University Library:

The Library now contains about twenty-four hundred volumes, exclusive of pamphlets, which may be classified as follows, to-wit: 500 volumes of reports from the various departments at Washington, and of the Agricultural and Horticultural Societies of the several States; 500 bound volumes of magazines and periodicals; 350 volumes on Chemistry and Physics; 150 volumes treating of the various branches of Natural History; 100 volumes pertaining to Agriculture and Horticulture; 100 volumes relating to English and History; 75 volumes pertaining to Pure and Applied Mathematics; 50 volumes relating to Political and Mental Science, 50 volumes relating to Industrial Art; 25 volumes relating to Mechanical subjects, and 500 volumes of miscellaneous works, consisting of works of reference, biography, fiction, etc.

The reading room is supplied with the following journals and periodicals, viz.: Nature, Chemical News, Chemisches Central-Blatt, Science, American Monthly Microscopical Journal, American Bee Journal, Trimen's Journal of Botany, Botanical Gazette, American Journal of Science, American Naturalist, Journal of the Royal Microscopical Society, Gardener's Monthly, Country Gentleman, American Agriculturist, National Live Stock Journal, Agricultural Gazette, Indiana Farmer, American Cultivator, Kentucky Live Stock Record, Scientific American and Supplement, Poultry World, Art Amateur, Art Interchange, Magazine of Art, American Machinist, The Blacksmith and Wheelwright, The Western Manufacturer, Ueber Land und Meer, Popular Science Monthly, Cassell's Family Magazine,

Harper's Monthly, Harper's Weekly, The Century, Atlantic Monthly, Littell's Living Age, North American Review, Contemporary Review, The Athenæum, The Nation, London Weekly Times, The Watchman, The New England Journal of Education, Indiana School Journal, and several daily papers.

From the above it will be seen that while the Reading Room is pretty well supplied with periodicals, the Library proper is poorly supplied with books in all the departments. In fact we can only say that it is a mere beginning of a first-class collection of books; and to bring it to the standard it should occupy, at least \$1,000 per year should be expended in the purchase of judiciously selected books.

When it is remembered that the amount expended is to be divided among eight or ten departments, it will be seen that \$1,000 is a very small sum to be appropriated annually for this purpose; and that a like appropriation must be continued, for several years to come, in order to bring our Library up to a standard of respectability.

It is particularly desirable that the departments of the Library pertaining to Agriculture, Mechanics, Industrial Art, Chemistry and Physics, and Natural History, should be made as complete as possible, for to these departments we must look for the distinguishing features of Purdue.

The students have spent much time in the Library during the past year consulting the books, and, besides this, there have been more than one thousand books withdrawn from the Library within that time. Very often works are inquired for that we do not have. This shows the necessity for an increase in the number of books. If we could expend \$1,000 in books, and \$250 in periodicals and binding the same, per year, these defects could soon be measurably remedied.

Respectfully submitted,

M. C. STEVENS,

Librarian.

REPORT OF CHEMICAL LABORATORY.

President E. E. White:

Since my last report I have continued my researches in sugar analyses, and with some very satisfactory results. My work in this direction has been greatly facilitated by a new Laurent polariscope, which we imported from Paris, in December, 1881.

This instrument is the exact counterpart of those used by the French Government in all of its internal and custom house sugar work, and represents the highest skill in construction of optical saccharimeters hitherto attained.

The researches on sugar have been chiefly in the direction of improved methods for the analysis of commercial starch sugars (amyloses), and of investigations of the extent of adulterations in sugars and syrups offered for public use.

The importance, both from an economic and sanitary view, of having pure sugars on our markets can scarcely be estimated, and hence the results of our work acquire an importance to the public welfare which is far greater than that possessed by most scientific investigations.

THE ESTIMATION OF DEXTROSE, MALTOSE AND DEXTRINE IN AMYLOSE (STARCH SUGAR.)

In a paper read at the Cincinnati meeting of the American Association for the Advancement of Science,* I gave a brief outline of some of the more important methods which have been proposed for the analysis of amylose. In closing, that paper I said:

"From a very extended series of analyses, I will say that there is no method known which will give reliable numbers for the percentage of the different constit-

*Science, Vol. II, No. 66, pp. 464-466.

uents. I propose to attempt the accomplishment of this very desirable result by first polarizing the solution, treating it with a reducible re-agent and re-polarizing the residue."

Since that time I have succeeded in carrying out this plan, with results which are sufficiently satisfactory to justify me in making them public.

SAMPLES.

The amyloses which I have used were those of commerce, and were manufactured in widely separated localities. They were subjected to no process of purification, and were obtained in the open market, and from the manufacturers. They were such as are usually employed in the adulteration of sugars and syrups.

THE PROCESS.

1. Ten grammes of the sample, undried, were dissolved in water, the volume made up to 1,000 cc. and used for the reduction of the standard Fehling's solution.

2. Ten grammes were dissolved in water, made up to 100 cc., and polarized in 200 mm. tube.*

3. Ten cc. of 2, were treated with an excess of the mercuric cyanide solution, (described further on,) and boiled. Hydrochloric acid (strong) was then added in slight excess and, after cooling, the volume made up to 50 cc.

4. The above was next polarized in a 500 mm. tube and the angular solution multiplied by two.

THEORY OF THE PROCESS.

1. The first reduction of Fehling's solution gives the total per centage of reducing matter, viz.: dextrose with a reducing value of 100; and maltose with a like value of 62.

2. The first polarization gives the apparent specific rotary power, due to all the optically active bodies present, viz.: dextrose = 52, maltose, 139, and dextrine = 193.

3. The second reduction (of mercuric cyanide) leaves in the solution as optically active the dextrine alone.

4. The second polarization gives the rotatory power of dextrine only.

With these points determined all the data necessary to the calculation of the percentages of the three substances are at hand.

THE MANIPULATION.

1. It is not advisable to take more than 10 g. in 1,000 cc. for treatment with the copper solution. From 10 to 20 cc. of this will reduce 10 cc. of the copper.

The end of the reaction I determine, in all cases, by filtering a drop or two into a white dish containing a little solution of ferrocyanide of potassium and acetic acid. Three closely agreeing determinations are made, and the mean of these taken as the correct result.

2. In polarization I find 10 g. in 100 cc. to be a convenient quantity. If a solid amylose is to be examined, the solution must be heated to 100° for some time to destroy birotation.

*To save one weighing, the solution (2) was first made, and 10 cc. of it made up to 100 cc. for No. (1).

For my optical work I use the large *penombre* instrument, made by Laurent, which has been adopted for use in all the sugar work done by the French government.

3. A convenient strength for the mercuric cyanide solution is 120 g. $\text{Hg}(\text{CN})_2$ and the same amount of stick NaOH per litre. It is not necessary to standardize the solution. If a preceitate is formed in mixing the cyanide solution with the alkali, filter through asbestos before using.

Twenty cc. of the solution will be found sufficient for amyloses with less than 65% reducing matter. When more than this is present use 25 cc.

In all cases a slight excess of cyanide must be used. Test by holding filtering paper with a little of the solution on it, over fuming HCl and afterwards over ammonium sulphide. A 50 cc. graduated flask is used. In boiling care must be taken that the liquid is not thrown out. Two or three minutes boiling will be found sufficient. On application of heat the liquid turns reddish brown. When HCl is added this coloration disappears. In no case have I found it necessary to use animal char or lead acetate to fit the liquid for the observation tube. Since the volume of the liquid has been increased during the process from 10 to 50 cc., and the tube of observation is only two and a half times as long as the first one, it becomes necessary to multiply the reading of the instrument by two in order to subject it to the same condition as the first polarization. This gives the polarization due to dextrine alone.

CALCULATIONS.

(1) The first reduction gives the reducing per cent. of the dextrose d + that of the maltose m . Since maltose, however, has a reducing power as compared with dextrose of only .62, we have the equation, $R = d + .62 m$. (1)

(2) The first polarization gives the rotation due to the dextrose, maltose and dextrine. From this the apparent specific rotatory power is easily calculated.* This gives the equation $P = 52 d + 139 m + 193 d'$. (2)

(3) The second polarization gives the dextrine rotation power and is expressed: $P' = 193 d'$. (3), from which the value of d' is easily calculated.

(4) To find d and m , subtract equation (3) from (2). This gives $P - P' = 52 d + 139 m$ (4). Multiply (1) by 52 and subtract from (4).

$$P - P' - 52 R = 106.76 m. \text{ (5). Whence,}$$

$$m = \frac{P - P' - 52 R}{106.76}, \text{ (6) and}$$

$$d = \frac{R - .62 m}{.62}, \text{ (7) and}$$

$$d' = \frac{P' - 193 d}{193}. \text{ (8)}$$

ILLUSTRATION.

Sample of solid amylose made by Peoria Grape Sugar Company.

10g. in 100 cc. Polarized $21^{\circ}.29$.

Whence $P = 106.45$. Per centage of reducing matter $R = 40.32$.

Polarized after treatment with $\text{Hg}(\text{CN})_2$, $13^{\circ}.4$. Whence $P' = 67$.

Substituting these values in the several equations:

$$(1.) \quad .4032 = d + .62 m.$$

$$(2.) \quad 106.46 = 52 d + 139 m + 193 d'.$$

$$(3.) \quad 67 = 193 d'.$$

$$(4.) \quad 39.45 = 52 d + 139 m.$$

* Proceedings A. A. A. S., Boston meeting, 1880, p. 301.

$$(5.) \quad 106.45 - 67 - (52 \times .4032) = 106.76 \text{ m.}$$

$$(6.) \quad \text{m.} = .1731 = 17.31 \text{ \%}.$$

$$(7.) \quad \text{d.} = .2959 = 29.59 \text{ \%}.$$

$$(8.) \quad \text{d'.} = .3472 = 34.72 \text{ \%}.$$

$$\text{Sum of m., d. and d'.} = 81.62 \text{ \%}.$$

$$\text{Water} = 16.26 \text{ \%}.$$

$$\text{Ash} = .19 \text{ \%}.$$

$$\text{Sum} = 98.07 \text{ \%}.$$

$$\text{Inactive} = 1.93 \text{ \%}.$$

The following is a table showing numbers obtained in seven analyses of different samples.

TABLE I.

NUMBER.	1	2	3	4	5	6	7
Per cent. reducing matter . .	40.32	76.33	72.83	66.67	67.57	37.88	41.84

After treatment with Hg (C.N)	13.4 °	1.38°	1.04°	2.36°	2.39°	17.46°	12.45°
Due to dextrose and maltose .	7.89°	8.47°	8.07°	7.83°	7.88°	5.49°	8.15°
Sp. gr. 10g in 100 cc	1.030136			1.03198	1.03107	1.03162	1.02938
*Per cent. solids from sp. gr..	78.28			83.07	80.70	82.13	76.57
†Per cent. solids determined directly and optically active .	81.62	80.85	76.41	74.38	75.25	85.87	80.85
Per cent. of ash19	.57	.23	.57	.63	.33	.24
Per cent. of water	16.26	9.43	15.75	16.24	14.94	16.82	18.31

NOTE.—No. 1 from Peoria Grape Sugar Company; No. 2, Buffalo; No. 3, Freeport, Ill.; Nos. 4 and 5, American Grape Sugar Co., Buffalo; No. 6, ditto; No. 7, Rockford Grape Sugar Co., Rockford, Ill.; Nos. 1, 2, 3, 4 and 5 were solids; Nos. 6 and 7, liquids. These samples show the widest difference in composition from an extremely low conversion like confectioner's glucose No. 6, to a very high conversion like No. 2.

Calculations from the above data give the following percentages of dextrose, maltose and dextrine:

TABLE II.

NUMBER.	1	2	3	4	5	6	7
Per cent. Dextrose. . . .	29.59	74.78	71.40	64.07	65.15	33.28	30.81
Per cent. Maltose	17.31	2.49	2.32	4.20	3.90	7.26	17.79
Per cent. Dextrine. . . .	34.72	3.58	2.67	6.11	6.20	45.24	32.25

The result in No. 6 is a remarkable one. The sum of the three percents, plus H_2O , is more than 100. This, doubtless, arises from the presence of a variety of dextrine or soluble starch, with a rotatory power, different from 193.

*Allen's Com. Organic Anal., Vol. II, p. 291.

†Sum of dextrose, maltose and dextrine.

If the percentages of dextrose, maltose and dextrine are calculated from the specific gravity of the solution,* the most contradictory results are obtained. In most cases, the percentage of maltose becomes a negative quantity of considerable magnitude, and the other percentages are in like manner distorted. This method, which heretofore has been regarded as the best one, is valueless for showing the actual composition of the starch sugar of commerce. Even if no other solids were present in the solution except the three in question, a slight error in specific gravity determinations would make a wide difference in its results. But the amount of other solids, optically inactive, present in a commercial starch sugar may be, as shown by my analyses, as great as 10 per cent.

For convenience I have placed the method of calculation, as given by Allen, in the form of the following

RULE:

Multiply the percentage of reducing matter in sample by 52. Subtract per cent. of reducing matter from total solids (determined from sp. gr.) less ash, and multiply remainder by 193. Take the sum of the two products and subtract from apparent sp. rot. power. Divide the remainder by 33.42 and multiply by 100 for per cent. of maltose. Multiply per cent. of maltose by 62, and subtract from reducing power for per cent. of dextrose. Find dextrine by difference.

If the sum of the optically active solids, determined in the direct way, is taken as a basis of calculation, and the above rule applied, it will afford a check on the direct method which will prove a valuable aid in reaching reliable results.

Following are the results obtained by this method compared with those given by direct determination:

TABLE III.

NUMBER.		1	2	3	4	5	6	7
Dextrine.	{ Direct . . .	29.59	74.78	71.40	64.07	65.15	33.38	30.81
	{ Calculated.	29.58	73.41	71.38	64.05	65.01	33.38	30.80
Maltose.	{ Direct . . .	17.31	2.49	2.32	4.20	3.90	7.26	17.79
	{ Calculated.	17.27	2.20	2.34	4.22	4.13	7.27	17.81
Dextrose.	{ Direct . . .	34.72	35.8	2.69	6.11	6.20	45.24	32.25
	{ Calculated.	34.70	35.24	2.69	6.11	6.11	45.23	32.24

The above numbers show that the method of direct determination is practically reliable. For if the results it gives were far from the truth, the theoretical calculations founded thereon would vary widely from the numbers obtained. Except in No. 2, however, this disagreement does not occur. In No. 2, the variation is too great to pass unnoticed. In such a case the error is probably some fault of the first determinations. When the variation is as great as in No. 2, a new analysis should be made.

I do not know any method for determining such bodies as soluble starch or varieties of dextrine as such. Enough has been given to show that the method of direct determination by double reduction and polarization is the only reliable one

* Allen, op. cit., pp. 346-7.

for estimating dextrose, maltose and dextrine in commercial amyloses, when these, as is generally the case, are the only optically active bodies present in any notable quantity. Practically the process will prove of great benefit to starch sugar manufacturers, brewers and distillers, and in all other cases where the exact constitution of these sugars is an important factor in their value.

The numbers given by this new process will vary with the numbers which represent the specific volatory powers of the several substances to be determined, and, also, with the number which expresses the relative reducing power of maltose.

If any or all of these numbers should undergo revision, it would only affect the results and not the method employed.

It must be also understood that the method itself is based on the assumption that both dextrose and maltose, when treated to saturation with reducible solution like mercuric cyanide, yield decomposition products which are optically inactive.

My experiments, so far, serve to confirm this assumption, although my inability to procure perfectly pure specimens of dextrose and maltose has prevented me from being able to communicate any definite information at the present time.

I will, therefore, reserve this part of the subject for a future report.

RELATION OF REDUCING POWER, AS MEASURED BY FEHLING'S SOLUTION TO THE ROTATORY POWER OF COMMERCIAL AMYLOSE (GLUCOSE OR STARCH SUGAR).

In a paper read at the Boston meeting of the American Association, I called attention to the fact that the reducing power of amylose, measured by Fehling's solution, could be readily determined by the polariscope. Since that time I have extended the series of observations then reported, with such results as to justify the conclusions at which I arrived.

In commercial amyloses, whose specific gravities do not vary much from 1.410, the reducing power is reliably calculated from the reading of the polariscope. The average percentage of water in these amyloses is nearly thirteen. If we allow one per cent. for optically inactive substances present, we may safely place the optically active matter at 86 per cent. By prolonged boiling with acids, even if they be quite concentrated, only about 82 per cent. of reducing matter is obtained. Further boiling causes the mass to turn brown, and may even cause a decrease in the amount of reducing matter found. Since there is so much difference of opinion respecting the reliability of Fehling's solution, and since there is no other reducing mixture that works as well, it would, perhaps, be better to use the polariscope for the determination of the amount of substances present in an amylose capable of reducing the various solutions used for grape sugar measurements.

In the following table the calculation of the reducing power was made by the formulæ which I have already explained. Although, in a few cases, the specific gravity varied by a few thousandths from 1.410, the difference has not been of sufficient importance to make any correction.

Since the ordinary amyloses, called grape sugars, of commerce, differ from those called glucoses only in having the processes of conversion carried further, it is found that the same rule applies to them also. In fact, I believe it will be found true with all varieties of amylose made by use of sulphuric acid, provided 8.6 grammes of the anhydrous substance be used in each 100 c. c. of the mixture to be examined.

The following are the results of my observations:

TABLE I.

No.	Sp. Gravity.	Reduc'g mat- ter by Fehling's Solu- tion.	Rotation of 10 g. in 100 c.c. Cane Sugar Scale.	Reducing matter cal- culated by Polariscope.	Difference.		Date of Manufacture.

The above analyses were of samples sent by the manufacturers, the Peoria Grape Sugar Company. They represent the whole number of samples examined, and in the order in which the analyses were made. Seventeen of them were of syrups, and the eighteenth of a solid sugar. Only four out of the eighteen show discordant results. In one of these the specific gravity was not determined. It was my intention to make these four analyses in duplicate, but a press of other business prevented. In general, it appears that the results given by the polariscope, by the above method of calculation, are a little too high. If they were diminished by .5 the agreement would be better. That the reducing power of amylose can be correctly calculated from its rotatory power, is certainly established from the thirty-eight unselected instances which have been presented in this and my former report.

MIXED SUGARS.

Mixed sugars are made of cane sugar and *amylose* (starch sugar.) Within a few years the mixed sugar industry has advanced from a small beginning to a business of considerable importance. It is difficult to get accurate data of the amounts of this sugar made. Manufacturers and dealers are extremely reticent on the whole subject, and often refuse to talk about it at all. I have, however, after considerable trouble, been able to get at the figures which will give at least an approximate estimate.

The principal centers of the grape sugar industry are Brooklyn and New York, Buffalo and Peoria. From a careful comparison of the data which I have been able to collect, I place the daily product of mixed sugars at the several factories at 1,500 barrels. This will be found not far from the truth. It is rather under than over the true number. It is thus seen that the mixing of sugars is a fact which is altogether too large to be laughed at. It must be remembered, too, that the manufacture is rapidly increasing, and is only limited now by the quantity of dry white amylose that can be made.

Amylose costs three and a half to four cents a pound by wholesale. Until the price of corn became so high it was half a cent less than this. It is, therefore, a very profitable business to mix it with cane sugar and sell the whole for the same price which the cane sugar would fetch alone. I have here on the table specimens of these mixed sugars. Here are eleven samples made by the Manhattan Refinery, of New York; also six samples from the Atlantic Refinery, of Buffalo, and six samples from Henry Hobart, of New York. These sugars are sold at retail under various names. Of these I may mention "New Process Sugar," "Niagara A B C," "Harlem B," "Excelsior C" and various others. To the eye these sugars look very much like straight cane sugars, and are generally pure and wholesome. They differ from the pure cane sugars in being less soluble in water and in being less sweet to the taste.

It has been estimated that amylose is two and a half times less sweet than sucrose; but this depends largely on the method of manufacture. Some samples of amylose will be found quite sweet, while others impart even a bitter taste.

In the manufacture of mixed sugars it is highly important that the amylose be dry. If hydrated amylose be used, it is found almost impossible to pulverize it, and when ground it is pasty and sticky. Machines have been patented for obtaining finely granulated amylose from the well dried specimens. It is quite impracticable, however, to obtain amylose entirely dry, and it is capable of being worked very well when it still contains 8 to 10 per cent. of water. This water is put in when sold at the same price as pure sucrose. In a commercial sense it is, therefore, not a disadvantage. The amylose which is used in mixing is generally made by high conversion under pressure. It therefore contains a high percentage of glucose (dextrose) as compared with the maltose and dextrine present. It is, therefore, less sweet to the taste than the liquid amylose, where the percentage of maltose is larger.

Many schemes for the estimation of the different constituents of a mixed sugar have been proposed. For a discussion of the methods of analysis by reduction and fermentation, I refer to my paper on amylose. I will content myself here with a brief outline of the methods which I have employed. The water is estimated by heating two or three grammes in a flat platinum dish to 150° C. for two hours. The percentage of cane sugar I determine by Clerget's method. First get the total rotation in the polariscope, after heating to 100° to destroy birotation, then invert by heating to 68° with H Cl, then polarize again, carefully noting the temperature. From these readings the percentage of cane sugar present is calculated from the following formula:

$$x = \frac{a - a'}{t} \div \frac{144}{2}$$

Here a = first reading of polariscope.

a' = second reading of polariscope.

t = temperature of observation.

x = percentage of cane sugar required.

In connection with the polariscope readings, I also made reductions both before and after inversion, and thus obtained valuable data in regard to the nature of the amylose present, as well as securing a check on the optical results.

Following is a scheme of an analysis which will illustrate the method of procedure :

Reduction. Took 10 g. in 1000 cc. Of this, to reduce 10 cc. Fehling's Solution, took 27.8 cc.

Then 1000: 27.8 = x : .05 (.05 g.=sugar corresponding to 10 cc. copper solution).

Whence x = 1.8 g.= 18 per cent. reducing matter.

Polarization. 26.048 g. in 100 cc. gave 97°.8+
After inversion at 21° " 2°.6—

Difference, = 100°.4

$$100°.4 \div 144 - \frac{21}{2} = 75.2 \text{ per cent. sucrose.}$$

Reduction after inversion.

For 10 cc. copper solution took 5.35 cc.

Then 1000: 5.35 = x : .05.

x = 9.35 g. = 93.50 per cent.

Deduct 18 per cent. due to amylose, gives due to

invert sugar 75.50 "

Sucrose by polariscope 75.2 "

Amylose, water and ash by difference 24.8 "

Following are the results of twelve examinations of mixed sugar:

No.	Per cent. Reducing Matter.	Per cent. Sucrose by Polariscope.	Amylose, Water, Ash, etc., by difference.	No.	Per cent. Reducing Matter.	Per cent. Sucrose by Polariscope.	Amylose, Water, Ash, etc., by difference.

The analysis of mixed sugars is at this time a matter of great public interest. It is important that the public be not defrauded by purchasing sugars under false names. It is true that the manufacturers, as far as I know, do not sell the mixed sugars as straight, but when they pass into the hands of the retail dealers they are usually disposed of as if they were genuine. I do not anticipate that mixed sugars will jeopardize the public health. When well made they are certainly palatable and harmless. For boiling with fruits, etc., as in making preserves, they are nearly as efficient as cane sugars. Nevertheless, a "mixed sugar" should be bought, sold, and consumed as a mixed sugar, and thus all "winking" at fraud be prevented.

* These per cents. include those of the bodies present (excepting water and ash), not sugar. These bodies are all soluble, or nearly so, in water are mostly precipitable by lead acetate, and may, therefore, be regarded as gummy substances natural to sugars. In most cases, the correct amount of anhydrous starch sugar present will be approximately the per cents. given diminished by ten per cent., since this is about the average per cent. of such substances in the commercial starch sugars.

† In these specimens the solids, not cane sugar, are in excessive quantity. Some of this is due possibly to invert sugar attached to the crystals of the cane sugar. This was not determined in the above experiments. Such sugars demand a further and more searching investigation.

‡ This is a genuine "sugar drip" syrup unmixed with starch sugar. The per cent., 35.78, is invert sugar and gums, etc., not optically active.

GENERAL REMARKS.

Nos. 1-10 and 17-28, inclusive, are cane sugars, more or less pure and unmixed with amylose.

Nos. 11-16, inclusive, are sirups all highly adulterated with glucose (amylose sirup) with exception of No. 15. The adulteration of commercial sirups is almost universal, and demands the especial attention of the sanitarian.

Nos. 19, 20, 24, 26 and 27 can hardly be called adulterated sugars, since it does not appear from the analysis that any foreign substance has been added to them for that purpose. They are, however, sold and consumed as pure cane sugars, and hence are to all intents and purposes adulterated.

Nos. 29 and 30 are samples of those sugars now made in such large quantities by mixing highly converted and lately crystallized starch sugar with ordinary cane sugar. Good dry starch sugar does not cost more than half as much as good cane sugar, and therefore it proves very profitable to mix the two and sell the whole as cane sugar. The manufacture of these sugars is constantly increasing, and the Legislature of our State should, by appropriate laws, protect the people against these growing frauds.

COMMERCIAL FERTILIZERS.

The law of the last Legislature appointing me State Chemist, required also that all commercial fertilizers exposed for sale should bear a label setting forth the results of my analysis. This so largely increased the work of the laboratory that it became necessary to assign me an assistant. Mr. G. L. Spencer was selected for this position and performed its duties to my entire satisfaction. At the end of the year Mr. Spencer went to France to study the processes of the manufacture of beet sugar. Mr. Walter H. Peters was selected as his successor. In all, sixty-one specimens of fertilizers have been subjected to analysis with results which are given in the sub-joined tables.

The design of the fertilizer law is to protect the farmers of the State against frauds in commercial fertilizers. As the law now stands, this protection is more nominal than real, since it contains no provision looking to the detection of frauds after the analysis is made. The Secretary of the State Board of Agriculture should be empowered by law to take samples of every fertilizer exposed for sale in the State, and have them analyzed and the results compared with the samples furnished directly by the dealers. A license tax of twenty-five cents a ton would yield a revenue large enough to cover the expenses of this investigation. With such a law in force dealers would be careful to have all their goods equal to the sample originally furnished by them, and thus complete protection would be furnished to farmers in an outlay for commercial fertilizers, which is rapidly increasing. The law limiting the fee for the analysis of such fertilizers to two dollars, should also be changed to conform to the actual outlay of skilled labor and chemicals. Ten dollars for such an analysis as the law requires would be a low compensation.

NOTE.—Nos. 16 and 17 are gypsums. No attempt has been made to give their market value. No. 44 is lime mixed with a clayey soil containing a high percentage of iron. It has a very small commercial value.

The basis of valuation, viz.: Ten cents a pound for soluble and reverted phosphoric acid, six cents for insoluble acid and potash and eighteen cents for ammonia, is about a mean of the value of these substances in the several States having fertilizing laws.

Nos. 1, 2, 3, 4 are analyses made before the fertilizer law went into effect. Nos. 5-11, inclusive, are of samples furnished by Prof. Ingersoll, and used in experimental form during 1881. No. 15 is of a fertilizer furnished me by E. Rauh & Sons, but not made by them. It has not been on the market during the past year.

No 16 is a sample of "cracklings," the residue from the tanks after the lard is extracted from hog-fat. It is not sold directly as a fertilizer, but is used to mix with fertilizers to increase the percentage of ammonia.

Deducting the analyses just mentioned, 16 in all, we have left 45, the actual

number made for commercial purposes, as required by law. Of these, however, 24 and 36, 27 and 38, 40 and 60, and 45 and 57 were duplicates. This leaves a total of 41 different brands of fertilizers offered for sale in the State in conformity to the law.

The duplicates above referred to were of different samples of the same fertilizer. The differences in the analyses are not great, with the exception of that in Nos. 45 and 57. In this case the two samples proved to be so different that we can not avoid the suspicion that two different kinds of goods were disposed of under the same name. It is certain that a great many tons of fertilizer have been disposed of in the State within the past year, without regard to the law. Two firms in St. Louis did a large business in the southern counties in open defiance of the law. I understand that the prosecuting attorney of Jefferson county has taken steps to fasten upon these offenders the full penalty of the the law.

With the changes in the law, which I have already suggested, so that its workings may become more effective by the proposed co-operation of the State Board of Agriculture, one could hardly estimate the immense advantage it will prove to our farmers. Our agricultural community is beginning to realize that the ingredients abstracted from the soil by the plant must be returned to it, if a high grade of fertility is to be maintained. The only way to secure this is through commercial fertilizers. The farmer, therefore, through the law, must be protected from frauds which can be so easily practiced.

PHOSPHORIC ACID IN COMMERCIAL FERTILIZERS.

Mr. G. L. Spencer, Assistant in this Department, undertook last year an investigation for the comparison of methods for the determination of phosphoric acid in commercial fertilizers. The results of his investigations are embodied in the following paper:

COMPARISON OF METHODS FOR THE DETERMINATION OF PHOSPHORIC ACID IN COMMERCIAL FERTILIZERS.

Within a few years our farmers have begun to realize that it is possible to exhaust the soil; that they must return to it those constituents which the plant takes up in its growth. The most convenient and usually economical method for restoring these essential conditions of plant life is through the medium of commercial fertilizers. In nearly every large city there are establishments for the utilization of waste blood, bone, etc., from the slaughter houses. This refuse matter, dried, ground, and chemically treated is sold to farmers under various names, and constitutes what are usually termed "Commercial Fertilizers." It is evident that there is great scope for unprincipled dealers to deceive the farmer and charge him exorbitant prices for an almost worthless article. In order to prevent this fraud, many States have stringent laws regulating the manufacture and sale of commercial fertilizers. They require that each package exposed for sale, shall bear a label, giving the results of a chemical analysis of a sample of the fertilizer. These

laws requiring an enormous number of phosphoric acid determinations, have created a greater demand for a simple and accurate method for making these analyses. By the indirect method, with ammonium molybdate, it is generally admitted that the most accurate results may be obtained, but at the expense of both time and valuable reagents.

In this thesis the object is to make a comparison of old and some new methods; and find what process gives the most satisfactory results with the greatest economy.

Plan of Thesis.—In each case I first made an analysis to ascertain approximately the amount of phosphoric acid present and thus regulate the proportions of molybdate solutions and magnesia mixture to be taken in subsequent operations. In order to obtain a perfectly uniform sample, I thoroughly mixed the fertilizer, weighed out 20 grams, ignited, to destroy organic matter, digested with hot concentrated nitric acid and made up to 200 c.c. For each analysis—except the greater proportion of those by the silver methods and Joulie's method—I used a portion of it measured from the same part of a burette. Gooch crucibles were used for all pyrophosphate ignitions. A set of analyses is given by each method selected and comparisons made with the standard. In each case, in order to render all results readily comparable, the percentage of error is given, on the supposition that the indirect method by previous precipitation as a phosphomolybdate, is the most accurate.

Fertilizer.—No. 1 Ground Bone. Preliminary work gave 20.50 % $P_2 O_5$, hence each gramme of the fertilizer would require about 200 c.c. molybdate solution and 20 c.c. magnesia mixture.

The first set of analyses was made to determine a standard for comparison. For this work, as stated above, the indirect method by previous precipitation with ammonium molybdate was selected. It is acknowledged by the best authorities to be the most accurate method known. The following are the results obtained:

(1)	Weight taken5000
	Weight $Mg_2 P_2 O_7$ obtained1589
(2)	Weight taken5000
	Weight $Mg_2 P_2 O_7$ obtained1588
(3)	Weight taken5000
	Weight $Mg_2 P_2 O_7$ obtained1590
	Mean weight of $Mg_2 P_2 O_7$ obtained1589
	Mean % $P_2 O_5$	20.32

In each of the above determinations 100 cc. molybdate solution and 10 cc. magnesia mixture were used. Five hours were allowed for the phosphomolybdate of ammonia to precipitate, and three hours for the magnesium ammonium phosphate. Sutton states, in his work on volumetric analysis, that this is sufficient time for both precipitations.

DETERMINATION OF PHOSPHORIC ACID AS PHOSPHOMOLYBDATE OF AMMONIUM.

The directions for the determination of phosphoric acid by this method, as given by the author, are briefly as follows: Extract the phosphate with nitric acid, evaporate to small bulk and neutralize excess of free acid with ammonia. Precipitate at low temperature, say 30° 35° C. with molybdate solution, made in the following proportions:

1 part	$Mo O_3$
4 parts	$N H_4 H O$
15 parts	$H N O_3$

This solution contains about 5 % Mo O₃. After allowing this to stand three hours, collect the precipitate on a filter, washing with dilute alcohol. Dissolve the precipitate in ammonium hydrate. Heat on a water bath, moistening occasionally with water, until the weight is constant. Divide the weight of the residue by 28.5, in order to obtain the weight of P₂ O₅. The author states that he removes silica, but neglects to state by what means. Probably by evaporation. In the first set of analysis by this method no especial efforts were made to remove silica. On this account, and owing to the small amount of the fertilizer taken, the result obtained can scarcely be taken as a fair test of the effectiveness of this method. These analyses show clearly that this method can never prove of practical importance, if, for no other reason, owing to the great amount of time expended in its manipulation. Temperature in each case, from 28-30°. Solution phosphatic material taken = 1 cc. Molybdate solution taken = 20.

Time required in heating to a constant weight, 2 hours.

Mean weight of residue5506
Mean % of $P_2 O_5$	19.3200
Mean percentage of error	4.9500
Mean error in per cent	1.0000

Second set of analyses by the phosphomolybdate method: Temperature, in each case, from 28° 30° C. Solution phosphatic material taken, 2 cc. Molybdate solution taken = 40. In order to free from silica, I evaporated to dryness over the water bath, moistened with nitric acid, and again evaporated to dryness; extracted the phosphate with water acidulated with nitric acid. The following are the results:

No. 1. Weight of evaporating dish	22.2006
1. Weighing of evaporating dish, plus residue, gave	23.7007
2. Weighing of evaporating dish, plus residue, gave	23.3595
3. Weighing of evaporating dish, plus residue, gave	23.3577
4. Weighing of evaporating dish, plus residue, gave	23.3568
5. Weighing of evaporating dish, plus residue, gave	23.3560
6. Weighing of evaporating dish, plus residue, gave	23.3558
Weight of residue	1.1552
Per cent. $P_2 O_5$	20.2600
Percentage of error	0.2900

Interval between each weighing, 1 hour.

Time required to heat to a constant weight, 6 hours.

No. 2. Weight of evaporating dish	16.9342
1. Weighing of evaporating dish, plus residue	18.1107
2. Weighing of evaporating dish, plus residue	18.0907
3. Weighing of evaporating dish, plus residue	18.0870
4. Weighing of evaporating dish, plus residue	18.0865
Weight of residue	1.1523
Percentage of error	0.6400

Interval between each weighing, 1 hour.

Time required in heating to a constant weight, 4 hours.

Mean weight of residue	1.1537
Mean percentage $P_2 O_5$	20.2300
Mean percentage of error	0.4400

In the second series the results compare very favorably with those by the indirect method with ammonium molybdate. The time required is fully as long, the manipulations more tedious, and the expense for ammonium molybdate nearly half as great. All things considered, I prefer the indirect method with ammonium molybdate to the phosphomolybdate.

Direct method.—Dissolve the phosphatic material in H Cl. Dilute and filter, nearly neutralize with ammonium hydrate, add ammonium oxalate, to precipitate calcium. Heat one hour; filter. To the filtrate add half a gram of citric acid, then ammonium hydrate in excess, and magnesia mixture. Calculate $P_2 O_6$ from the weight of $Mg_2 P_2 O_7$.

(1)	Weight taken5000
	Weight $Mg_2 P_2 O_7$ obtained1523
	Per cent. $P_2 O_5$	19.4800
	Percentage of error	4.1300
(2)	Weight taken5000
	Weight $Mg_2 P_2 O_7$ obtained1542
	Per cent. $P_2 O_5$	19.7200
	Percentage of error	2.9500
(3)	Weight taken5000
	Weight $Mg_2 P_2 O_7$ obtained1561
	Per cent. $P_2 O_5$	19.9700
	Percentage of error	2.9500

The saving of time and expensive reagents by this method is more than counter-balanced by the lack of accuracy. The expense of working by the "indirect method" with ammonium molybdate may be materially lessened by saving the waste and recovering the molybdic oxide.

SILVER METHOD, GRAVIMETRIC.

After many unsuccessful efforts to apply the method given by E. Perrot, I attempted to change it to a gravimetric method. My results are given here more especially to show the influence of citrates upon the precipitation of ammonium magnesium phosphate. The first series of results was obtained by precipitation, in the absence of citrates. The following is a description of the method: Ignite the fertilizer until the ash is white. Boil with concentrated nitric acid. Dilute and filter. By this means the greater part of the iron is removed and the chlorides decomposed. Make the filtrate up to a definite measure. Take 5cc to 10cc of the solution according to the probable amount of phosphoric acid present. Add silver carbonate in slight excess. Boil, and filter, washing thoroughly with hot water. Test the filtrate, in order to be certain that the silver is present in excess. Wash the precipitate from the filter and dissolve in a very little dilute nitric acid. Remove the silver by Na Cl. Add ammonium hydrate, citric acid, and magnesia mixture. Proceed as by the "indirect method." This method and the *Silver Method, volumetric*, depend upon the fact that ortho-phosphoric acid is completely precipitated from nitric acid solution by adding slight excess of silver carbonate. Also, silver ortho-phosphate is insoluble, or very sparingly soluble, in water. Silver ortho-phosphate is precipitated by adding silver nitrate to basic or acid ortho-phosphates in solution. The following results were obtained by this method: First series, Fertilizer No. 1, Ground Bone, indirect method, gave as a mean of three determinations, .1589, the weight of magnesium pyro-phosphate obtained from .5000 gram of the fertilizer. Weight taken for each determination, .5000. In the absence of citrates,

No. 1.	Weight of $Mg_2 P_2 O_7$ obtained .1522	Error — .0067
No. 2.	Weight of $Mg_2 P_2 O_7$ obtained .1524	Error — .0065
No. 3.	Weight of $Mg_2 P_2 O_7$ obtained .1523	Error — .0066
No. 4.	Weight of $Mg_2 P_2 O_7$ obtained .1525	Error — .0064
No. 5.	Weight of $Mg_2 P_2 O_7$ obtained .1524	Error — .0065
No. 6.	Weight of $Mg_2 P_2 O_7$ obtained .1581	Error — .0008

The uniformity of the error in most of these results is quite noticeable. I have

never since, even under the same conditions as nearly as possible, been able to obtain concordant results. These six determinations were made at the same time. The following results were obtained under the above conditions:

Series No. 2. Fertilizer No. 1. Correct weight of $\text{Mg}_2 \text{P}_2 \text{O}_7 = .1589$.

No. 1. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1128. Error — .0641
No. 2. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1481. Error — .0108

Series No. 3. Fertilizer No. 2. Bone super-phosphate. Weight taken, 1.0000. Correct weight of $\text{Mg}_2 \text{P}_2 \text{O}_7 = .1346$.

No. 1. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1552. Error + .0206
No. 2. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1445. Error + .0099

Series No. 4. Same fertilizer and standard as in series No. 3. Added .5000 citric acid.

No. 1. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1386. Error + .0040
No. 2. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1374. Error + .0028
No. 3. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1490. Error + .0144
No. 4. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1403. Error + .0057
No. 5. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1454. Error + .0108
No. 6. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1445. Error + .0099

Series No. 5. Fertilizer No. 4. Bone meal. Weight taken .5000. Correct weight $\text{Mg}_2 \text{P}_2 \text{O}_7 = .1690$, conditions as in series No. 4.

No. 1. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1481. Error — .0209
No. 2. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1429. Error — .0565

Series No. 6. Fertilizer No. 5. Ground bone. Used magnesia mixture as prepared by Joulie. Weight taken .5000. Correct weight $\text{Mg}_2 \text{P}_2 \text{O}_7 = .1598$.

No. 1. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1565. Error — .0033
No. 2. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1482. Error — .0116

From the above series of analyses, I concluded that the presence of citrates render the results too uncertain to be depended upon. I made a few more determinations, using Joulie's magnesia mixture, and two series using citric acid. From the results obtained, I am more strongly prejudiced against the use of citrate.

Series No. 7. Fertilizer No. 8. Bone phosphate. Used Joulie's magnesia mixture, stirring frequently. Weight taken .8000. Correct weight $\text{Mg}_2 \text{P}_2 \text{O}_7 = .1803$.

No. 1. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1623. Error — .0180
No. 2. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1641. Error — .0162
No. 3. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1670. Error — .0133
No. 4. Weight of $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1624. Error — .0179

Series No. 8. Fertilizer No. 7. Raw bone superphosphate. After removing the silver; I added excess of $\text{NH}_4 \text{HO}$, then enough citric acid to redissolve the precipitated iron and alumina. Weight taken .5000. Correct weight of $\text{Mg}_2 \text{P}_2 \text{O}_7 = .1425$.

No. 1. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1447. Error + .0022
No. 2. Weight $\text{Mg}_2 \text{P}_2 \text{O}_7$ obtained1443. Error + .0018

Series No. 9. Fertilizer No. 9. Flour of bone. Same conditions as in series No. 6. Weight taken .5000. Correct weight $\text{Mg}_2 \text{P}_2 \text{O}_7 = .2002$.

No. 1.	Weight $Mg_2 P_2 O_7$ obtained1825.	Error — .0177
No. 2.	Weight $Mg_2 P_2 O_7$ obtained1844.	Error — .0158
No. 3.	Weight $Mg_2 P_2 O_7$ obtained1936.	Error — .0066

I have repeatedly examined the first filtrate, *i. e.*, after adding the silver carbonate, and phosphoric acid is invariably absent. This shows that the negative result can not be due to incomplete precipitation by the silver. Notwithstanding the large number of negative results obtained, I still think that a good method will be developed depending upon precipitation of the phosphoric acid by a silver salt, instead of ammonium molybdate. I am strongly inclined to doubt the reliability of any method depending upon citrates to hold the iron and alumina in solution. The advantages that carbonate of silver possesses over ammonium oxalate for the removal of calcium, are that it is more rapid in its action, and the solution is left in a better condition for subsequent manipulations.

SILVER METHOD, VOLUMETRIC.

This method is precisely the same as the *Silver Method*, gravimetric, except that the $P_2 O_5$ is determined by a standard uranium solution, after the removal of the silver, instead of precipitating with magnesia mixture. In standardizing the uranium solution for use in the presence of silver, I proceeded as follows: I took 50 cc. standard $Na_2 H P O_4$ solution representing 1 gramin $P_2 O_5$, precipitated the phosphoric acid with silver nitrate, redissolved the precipitate and titrated to determine the amount of uranium solution required for 1 grm. $P_2 O_5$.

1st Series. Fertilizer No. 2. Bone superphosphate contained more iron than an average fertilizer. On igniting gave off sulphur fumes. This specimen was probably as severe a test as could have been given this method. I did not remove the silver from the solution. Correct percentage of $P_2 O_5$ 8.61.

Analysis No. 1.	Percentage $P_2 O_5$	8.75	Percentage of error	1.97
Analysis No. 2.	Percentage "	8.86	Percentage of error	2.90
Analysis No. 3.	Percentage "	8.60	Percentage of error11
Analysis No. 4.	Percentage "	8.88	Percentage of error	3.13
Analysis No. 5.	Percentage "	8.67	Percentage of error69
Analysis No. 6.	Percentage "	8.60	Percentage of error11
Analysis No. 7.	Percentage "	8.67	Percentage of error69
Analysis No. 8.	Percentage "	8.75	Percentage of error	1.62
Analysis No. 9.	Percentage "	8.49	Percentage of error	1.39
Analysis No. 10.	Percentage "	7.94	Percentage of error	7.77

The above results show very clearly that the silver must be removed before adding the uranium solution.

Series No 2. Fertilizer No. 2. Removed silver by Na Cl. Neutralized with $Na_2 C O_3$. Correct % $P_2 O_5$ 8.61.

Analysis No. 25.	Percentage "	. . . 25.91.	Percentage of error	1.37
Analysis No. 26.	Percentage "	. . . 25.91.	Percentage of error	1.37
Mean percentage of error, by the silver method, volumetric				= .69
Greatest percentage of error				2.49
Least percentage of error04
Greatest error in percentage				= .37
Least error in percentage				= .01

This method is rapid and accurate. Of course as in any volumetric method, a slight error in the burette is multiplied, a difference of one-tenth on the burette often amounting to nearly one-tenth of one per cent. For commercial purposes I consider this method sufficiently accurate. It is very inexpensive, as the silver is quite easily recovered from the waste, as is also the uranium. This method has a decided advantage over Joulie's, inasmuch as it deals with larger quantities, never less than one-tenth gram $P_2 O_5$. In Joulie's method, the limit given by the author is about .0400. In many fertilizers this would correspond to less than a quarter of a gram of the fertilizer to be taken.

Joulie's Method.—The following results were obtained by this method:

Fertilizer No. 6. Ground bone. Correct percentage, $P_2 O_5 = 27.11$.

Analysis No. 1.	Percentage $P_2 O_5$. . . 26.24.	Percentage of error	3.20

Analysis No. 9.	Percentage "	. . . 26.60.	Percentage of error	1.84

New series; same fertilizer, same condition:

Analysis No. 1.	Percentage $P_2 O_5$. . . 26.60.	Percentage of error	1.84
Analysis No. 2.	Percentage "	. . . 26.76.	Percentage of error	1.29
Analysis No. 3.	Percentage "	. . . 26.93.	Percentage of error	0.66
Analysis No. 4.	Percentage "	. . . 26.76.	Percentage of error	1.29
Analysis No. 5.	Percentage "	. . . 26.76.	Percentage of error	1.29
Analysis No. 7.	Percentage "	. . . 26.76.	Percentage of error	1.29

Fertilizer No. 8. Bone superphosphate. Correct percentage $P_2 O_5$, 14.42.

Analysis No. 1.	Percentage $P_2 O_5$. . . 14.73.	Percentage of error	2.15
Analysis No. 2.	Percentage "	. . . 14.73.	Percentage of error	2.15
Analysis No. 3.	Percentage "	. . . 14.78.	Percentage of error	2.49

The results obtained with fertilizer No. 8 are precisely the same as those with the same fertilizer by the silver method, volumetric. As I have previously stated, this method possesses the disadvantage of dealing with a very small amount of the fertilizer. In some of the above analyses as little as .1500 gram. Hence the error is multiplied. It is very simple, and where a large number of determinations is to be made, can be used to advantage. The results of my experiments with Joulie's magnesia mixture in the *silver method*, *gravimetric*, show that larger quantities could not well be used.

SUMMARY.

Practice shows that Joulie's method is capable of good results at the least expense. The *Silver Method*, *volumetric*, gives good results, requires less skill than Joulie's, and the expense is small. I am inclined to doubt the accuracy of any gravimetric method requiring precipitation in the presence of citrates. The phosphomolybdate method is entirely too tedious to amount to anything, practically, and is also open to the objection as to small quantities taken for each analysis. When one has plenty of time and not too little money at his disposal, the indirect method by previous precipitation, as ammonia phosphomolybdate, is to be preferred. It is not attended by that feeling of uncertainty which is common to most other methods. From experience obtained in making over two hundred analyses by this method, I feel justified in saying that I consider it perfectly reliable. For commercial work where two or three tenths is not considered a bad error, I prefer the *Silver Method*, *volumetric*.

APPENDIX.

Of the six methods examined, I consider the one by previous precipitation, as ammonia phosphomolybdate, the most accurate. The results always are reliable. In twenty-six consecutive determinations by the volumetric silver method, the greatest error was on a fertilizer unusually rich in phosphoric acid. It contained 27.11 % $P_2 O_5$. The least error was on one containing a large amount of iron and other substances not usually present in large quantities. As different samples of the same fertilizer may vary in amount of $P_2 O_5$ as much as 2 to 3 %, I do not consider these errors too great for commercial work. The State laws governing the manufacture of fertilizers usually make allowance for variations as great as 1 %, and sometimes even more. But, still, this does not remove objections to any method wherein there is a possibility of error from interfering substances. A part of the errors might be due to an error between the balance and the burette employed. The burettes were not tested by the balance, as probably should have been done.

SORGHUM.

The economic importance of the Northern sugar cane (*sorghum saccharatum*) has lately been, for the first time, recognized both by the government and by scientific and practical farmers. Quite a number of varieties of this cane was raised on the College farm last summer, and subjected to chemical analysis.

FOLLOWING ARE THE ANALYSES OF JUICE OF SUGAR CANE GROWN ON EXPERIMENTAL FARM.

No.	Variety.	Total Weight of Cane.	Rate Per Acre in Pounds.	Weight Bagasse.	Per Cent. of Bagasse.	Per Cent. of Juice.	Per Cent. of Cane Sugar in Juice.	Per Cent. of Invert Sugar in Juice.	Ratio of Invert to Cane Sugar.	Weight of Juice.	Specific Gravity of Juice.	Total Per Cent. of Sugar of both kinds in Juice.	Per Cent. of Water in Juice.	Per Cent. Albuminoids, Chlorophyll, Gums, etc.	REMARKS.

The foregoing analyses show several results of the highest practical interest:

1. To cut cane and allow it to lie in the field exposed to hot sunshine and cool nights, to rain and dew, destroys all prospect of obtaining crystallized or crystallizable sugar. On the other hand, cane cut and stored in sheds, undergoes very little change compared with that left in the open field. Upon the whole it appears better to let the cane stand in the field until it can be put through the mill.

2. The relative percentage of invert sugar in the raw juice is much greater than has been found by the experiments at Washington. This is to be accounted for in two ways:

(a) The method of determining the cane sugar, in the above analyses, was by the polariscope. In all cases the cane sugar, after the direct reading, was inverted, the temperature of the second reading carefully noted, and the cane sugar computed by

Clerget's method. In these inversions the juice, plus one tenth volume of strong hydrochloric acid, was heated to 68° C, and then cooled and polarized. Subsequent investigations have shown me that there is a slight variation in juices heated thus to different temperatures, and for different times, and this might lead to a small correction in the numbers obtained.

(b) The juice analyzed was taken as it ran from the mill, and, therefore, included that from all kinds of canes—ripe, half ripe, and green. Juice taken in this way would naturally contain more invert sugar, gums, etc., than that taken from a single ripe stalk.

3. The numbers obtained above have a special interest in showing that canes for sugar making should be carefully sorted, and all green and imperfect ones rejected. The labor required for this would be richly repaid in the increased yield of cane sugar from first-class canes. All the rejected canes could afterward be worked up into syrup.

4. The season was remarkably cold and wet, and the cane was worked when much of the seed was still in the dough, and before a great deal of it had formed at all. With a dryer and warmer season, the yield of cane sugar would undoubtedly have been much greater.

5. In general it appears, from the analyses made, that the sorghum cane is not as great a sugar-producer as the government analyses have shown. But a wider experience and a greater diversity of seasons are needed to fix its real value.

To show the character of the finished syrups and sugars made from the sorghum cane, I have subjected nine samples to analysis with the following results:

Number.	Syrup or Sugar.	Polarized directly.	Polarized after inversion.	Temperature C°.	Per cent. invert sugar before inversion.	Per cent. invert sugar after inversion.	Per cent. invert sugar due to cane sugar.	Equivalent to per cent. cane sugar.	Per cent. moisture at 120° C.	Sp. gr.	Ash.	Per cent. solids, organic, not optically active.
1	Sirup	32	14.7	24°	18.26	56.11	37.85	35.96	29.78	1.387	3.61	12.97
2	Sirup	28	15.2	21.5	29.81	61.75	31.94	30.34	20.29	1.3905	3.07	14.50
3	Sirup	37.5	17.7	21	20.37	63.11	42.74	40.6	20.65	1.3976	3.18	14.45
4	Sirup	40.5	16.3	22	20.3	60.12	39.82	37.83	20.12	1.3967	3.11	13.77
5	Sirup	43.9	18.4	22	17.84	62.32	44.48	42.27	19.89	1.3981	3.22	12.21
6	Mush sugar.	53.2	17.7	23	18.37	73.84	55.47	52.7	*	*	*	*
7	Orange molasses from centrifugal	31.5	12.5	22	20.37	58.38	38.01	36.11	*	*	*	*
8	Semi-sirup for sugar making	37.5	17.5	22	12.02	51.01	38.99	37	*	*	*	*
9	Pure white sugar.	97	31	26.5	97.808	*	.1	2.01

Nos. 1, 2, 3, 4 and 5 were sirups made by the Lafayette Sugar Refinery, in open pans.

No. 6. A mush sugar, made in vacuum pan by the Champaign, Ill., Sugar Refinery, and ready for the centrifugal.

No. 7. Molasses made in vacuum pan by the Champaign, Ill., Sugar Refinery, extracted from sugar by centrifugal.

No. 8. Semi-sirup, made by same company, boiled to about 25° B, and stored away for future concentration in pan and crystallization. The specimen examined had been made about two months.

In the sirups above made from the cane juices, whose analyses are given in table, the percentage of invert sugar is relatively large. On the other hand, in the mush sugar and semi-sirup made at Champaign, this percentage is relatively small. Whenever the ratio of invert to cane sugar is as 1 to 3, or greater, the juice will prove profitable for sugar making; if it falls below this, the profitable extraction of the crystallizable sugar will prove a problem of great difficulty. The large percentage of organic matter, not sugar, present in sorghum sirup, is also a matter calling for the careful consideration of the chemist, and in the separation of these substances from the sirups will be found hereafter the real solution of the sorghum problem.

No. 9. A pure white sugar, shows what can be accomplished with the Northern sirup cane with proper appliances and intelligent direction.

* Not determined.

The consumption of sugar by the American people is now large and is rapidly increasing. There is scarcely any line of investigation which has so much economic and sanitary importance as that which leads to disclosure of the character and purity of this universal commodity. It is the duty of the State to see that her citizens are furnished a pure and wholesome article of sugars and sirups. I have found that the adulteration of the sirups of commerce, by sirups made from corn starch (liquid Amylose), is almost universal, this adulteration amounting sometimes to as much as 90 %. With crystallized sugars, adulterations are less frequently practiced, but the practice is constantly increasing. Lately a crystallized starch sugar has been manufactured, which in appearance and other qualities resembles pure cane sugar, and thus renders the adulteration much more difficult of detection by other than chemical or optical methods.

The State should protect its citizens in the consumption of sugar, as it does its farmers in the use of fertilizers, and require every sugar exposed for sale in the State to bear its proper name, and a label setting forth its composition. Each purchaser would then know the exact character of the article he proposed buying. If then he preferred to purchase the cheap and adulterated articles, he would do so with full knowledge of the character of the transaction.

A law requiring every person proposing to sell sugar at wholesale in the State, to furnish a sample for analysis, and attach a label setting forth the analysis to each barrel, hogshead or other packages of sirup or sugar, would secure to our citizens perfect immunity from fraud. Since these labels furnished, according to the plan now in use for fertilizers, would increase the cost of each barrel only one cent, it would be a matter of no consequence to either consumer or dealer. Such a law would not only secure for our citizens pure sugars, and then protect their health, but would also save us annually many thousands of dollars now paid for adulterations.

CLAY ANALYSIS.

I have made five analyses of Indiana clays for the State Drain Tile-Makers' Association. Our State has an abundance of every variety of clay suitable for the manufacture of all kinds of fictile products, from the rudest brick to the finest porcelain. The manufacture of encaustic tiles, for floors and pavements, has already assumed large proportion, and Indiana should be as celebrated for porcelain as Sevres and Dresden.

ANALYSIS OF INDIANA CLAYS.

Number.	Kind of Clay.	Locality.	Si O ₂ Silica.	Al ₂ O ₃ Alumina.	Fe ₂ O ₃ Iron Oxide.	Ca O Lime.	Mg O Magnesia.	Volatile Matter and Combined Water.	Hydrosopic Moisture.	Total.	Soda, Potash, etc, estimated by difference.
1	Blue Stone	Bloomington	65.42	23.99	1.54	0.90	0.90	5.98	1.68	100.41	0.00
2	Yellow Clay	Fountain Co.	50.43	22.18	4.37	6.58	1.74	10.10	2.52	97.92	2.08
3	Blue Stone	Annapolis	65.37	24.57	0.91	0.70	0.12	6.61	1.79	100.07	0.00
4	Blue Clay	Summitville	68.50	17.55	1.38	1.20	0.25	4.57	3.94	97.39	2.61
5	Kaolin	Lawrence Co.	44.54	41.18	trace	trace	0.19	13.98	0.00	99.89	0.11

These clays, with exception of the kaolin, were furnished by J. J. W. Billingsley, to be examined for the State Tile-Makers' Association. The kaolin I have had in my case of minerals for five years. Nos. 1, 2 and 3 were crushed and air dried in a room without heat for eight days. No. 4 was treated in the same manner for four days. The piece of kaolin for analysis was taken from the outside. It lost no weight when finely powdered and dried four hours at 120°C.

Nos. 1 and 3 have a chemical composition, which fits them for making fire-brick or other highly refractory articles. Nos. 2 and 4 are good articles of clay for drain-tiles and ordinary bricks. No. 2 would make an easily fusible brick on account of the large amount of iron and lime which it contains. No. 5 is an excellent article of kaolin for porcelain making.

SOIL ANALYSIS.

While we must admit that the value of chemical analyses of the soil has been overrated by many writers, yet it is certain that it does have a real value. Its importance lies chiefly in the line of directing the experimenter in the proper course for securing the best results from the use of fertilizers. This is strikingly illustrated in the analyses of soils appended.

With such a valuable and detailed chart of the soil as this table gives, the practical farmer will at once be led to select those fertilizers which will most readily supply the deficiencies in the soil which the analyses have revealed. A soil analysis, however, to secure its full value, must be supplemented by several years of intelligent experimentation founded on its data.

ANALYSIS OF SOILS FROM PURDUE FARM.

COMPONENTS.	Surface Soil.	Upper Subsoil.	Lower Subsoil.
Insoluble.	83.06	85.92	86.05
Water at 125° C.	3.46	3.33	1.93
Ammonia	0.02	0.01	0.009
Soluble Silica	0.16	0.20	0.12
Lime	0.16	0.80	0.54
Carbonic Acid	0.08	0.12	0.18
Iron Oxide and Alumina	10.80	7.40	9.70
Humus	2.30	1.08	0.87
Magnesia	0.25	0.28	0.18
Phosphoric Acid	0.10	0.075	0.064
Potash	0.20	0.10	0.16
Soda	0.22	0.26	0.19
Total	100.81	99.58	100.003

These analyses were made by Mr. W. H. Peters. A striking peculiarity of this soil is the absence of hydrochloric and sulphuric acids, and the small per cent. of lime. From a chemical point of view, these soils would be benefited by an application of gypsum, crushed limestone and common salt. The "insoluble" is the residue left after digesting the finely powdered soils for several hours with strong hydrochloric acid.

The past year has been an unusually busy one in the chemical laboratory. In addition to the work reported, regular instruction has been given in theoretical and practical chemistry to students ranging in advancement from the beginner to those engaged in original investigations.

Respectfully, etc.,

H. W. WILEY,

Professor of Chemistry.

ANNUAL REPORT

OF THE

Indiana State Normal School

CONTAINING

Reports of the President of the Board of Trustees, of the President
of the Faculty, of the Secretary of the Board,
and of the Treasurer,

FOR THE

FISCAL YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 5, 1882, by the Governor, to be presented to the Legislature when it shall next convene, referred to the Auditor of State for verification of financial statements, and delivered to the Secretary of State to be filed and preserved in his office, and printed as may be ordered by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 8, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, do hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in the office of the Secretary of State, December 8, 1882.

E. R. HAWN,
Secretary of State.

BOARD OF TRUSTEES

OF THE

INDIANA STATE NORMAL SCHOOL.

HON. MURRAY BRIGGS, Sullivan.

HON. JOSEPH GILBERT, Terre Haute.

HON. BARNABAS C. HOBBS, Bloomington.

HON. JOHN M. BLOSS, Indianapolis.

HON. GEO. I. REED, Peru.

OFFICERS OF THE BOARD.

PRESIDENT,

HON. MURRAY BRIGGS, Sullivan.

SECRETARY,

HON. JOSEPH GILBERT, Terre Haute.

TREASURER,

W. R. McKEEN, Esq., Terre Haute.

BOARD OF VISITORS.

WILLIAM T. HARRIS, LL. D., Concord, Mass.

WILLIAM H. PAYNE, A. M., Ann Arbor, Mich.

H. S. TARBELL, A. M., Indianapolis, Ind.

FACULTY.

GEO. P. BROWN, President,
Didactics and Psychology.

W. W. PARSONS,
History and Civil Government.

MARGARET COX,
Critic Teacher in Grammar School.

CORA HILL,
Critic Teacher in Intermediate School.

HATTIE SCOTT,
Critic Teacher in Primary School.

REPORT OF TRUSTEES.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

The Trustees of the Indiana State Normal School have the honor to submit to the General Assembly, through you, their thirteenth annual report.

Accompanying this will be found the report of the President of the Faculty, which explains fully the objects and purposes of the school, and what it has done to increase the usefulness of our common schools in furnishing a more efficient corps of teachers. It will be seen that this school is more closely identified with the interests of the mass of the people of the State than any other of our educational institutions. Since its organization it has given professional training to teachers from every county in the State. These pupils have gone back home and given to the people in the common schools of their respective neighborhoods the benefit of their training. A record, kept from its establishment, shows that ninety per cent. of the students come from the laboring classes of the people; principally from the farm. Its chief object being to improve the character of our common schools, and its pupils coming so largely from the families of farmers and mechanics, we think, should recommend it to the generous support of the representatives of the people.

When the school was established, in 1870, the amount annually appropriated for tuition purposes was \$10,000, and the number of students enrolled was 150. In two years the appropriation was increased to \$15,000, while the number of students enrolled increased to 228. The gradual but steady growth of

the school required the employment of additional teachers, but the Board of Trustees has been enabled to keep within the appropriation by reducing the salaries of the members of the Faculty in obedience to a requirement of the Legislature, in an appropriation bill passed in 1878. Since that time, however, the enrollment has increased three-fold, and has required the employment of additional teachers, until our pay roll greatly exceeds the amount we are receiving from the State. We therefore urge upon the Legislature the necessity of authorizing an increase of \$5,000 to our annual appropriation for tuition.

An appropriation of \$5,000 per annum was made for repairs and incidental expenses of the institution by the last Legislature. In addition to this amount a specific appropriation of \$5,000 for the purchase of a new heating apparatus was agreed to by the appropriation committees, but failed, with the entire specific appropriation bill, to become a law. This failure made it necessary that the expense of the heating apparatus be paid out of the appropriation for repairs and contingent expenses. The Secretary's report shows that the incidental fund for the last fiscal year has been overdrawn to the amount of \$1,565.82. Other needed repairs to the building have not been made for want of funds. A continuation of the rigid economy which has thus far characterized the management of this institution will make it possible to meet the constantly increasing incidental expenses of the institution from an appropriation of \$5,000 per year for this purpose.

It will be impossible to meet these incidental expenses of the institution on anything less than the appropriation made by the last Legislature.

The late Chauncy Rose, Esq., of Terre Haute, was induced to give the School \$4,000 for the purchase of a library. This money has been expended judiciously from time to time, until about eighteen hundred volumes have been secured. The State has never given a dollar for this object, and we are entirely indebted to the generosity of Mr. Rose for this valuable adjunct. It is, however, lacking in books of a strictly professional character, and those recent publications that treat of the science of teaching according to modern methods. The State is asked for an appropriation of \$2,000 for this purpose.

No school of the kind in the country is so deficient in the matter of scientific apparatus. It has almost nothing in this line, and has never received anything from the State for the purpose. We call the attention of the Legislature to the poverty of the institution in this respect, and respectfully ask that we be given \$2,000 to be used for this object.

Respectfully submitted,

MURRAY BRIGGS,

President Board of Trustees.

REPORT OF PRESIDENT.

HON. MURRAY BRIGGS, *President Board of Trustees*
Indiana State Normal School:

DEAR SIR—The following, which is the thirteenth annual report made by the President of the Faculty to the Board of the condition of the institution under your charge, is respectfully submitted:

STATISTICS.

The number of students enrolled during each of the three terms of the year, is as follows:

Winter Term.....	256
Spring Term	424
Fall Term.....	280
Total.....	960
Average enrollment per term.....	302

GROWTH OF THE SCHOOL.

The following table shows the total enrollment for each term, the average term enrollment, and the whole number of different students, who have attended each year since the organization of the school:

YEAR.	ENROLLMENT.				Average Term Enrollment.	Whole No. Different Pupils for the Year.
	Winter Term.	Spring Term.	Fall Term.	Total.		
1870.	40	66	36	142	47	98
1871.	33	84	76	193	64	141
1872.	85	131	96	312	104	224
1873.	106	197	125	428	143	286
1874.	74	279	143	496	165	304
1875.	146	218	121	485	162	322
1876.	118	183	103	404	135	282
1877.	120	246	171	537	179	329
1878.	187	413	216	816	272	592
1879.	198	385	200	783	261	530
1880.	218	372	258	848	283	578
1881.	270	478	258	1,006	335	732
1882.	256	424	280	960	320	694

WHENCE THEY COME.

A record has been kept of the vocations of the parents of those students who have entered the Normal School since its organization. Nearly all of them come from the farms and the workshops.. The following is a detailed statement of the per cent. of attendance from the different vocations:

Children of farmers.....	70 per cent.
Children of mechanics.....	10 per cent.
Children of merchants.....	4 per cent.
Children of professional men.....	6 per cent.
Children of laborers, railroad men, etc.....	10 per cent.

The whole number of different students who have attended the School since its organization is 3,500.

RESIDENCE OF THE STUDENTS.

The following table exhibits the number who have attended from the different counties of the State:

Adams, 5; Allen, 7; Bartholomew, 16; Benton, 6; Blackford, 4; Boone, 39; Brown, 7; Carroll, 43; Cass, 33; Clarke, 29; Clay, 58; Clinton, 24; Crawford, 8; Daviess, 13; Dearborn, 15; Decatur, 38; DeKalb, 13; Delaware, 18; Dubois, 12; Elkhart, 7; Fayette, 18; Floyd, 7; Fountain, 27; Franklin, 10;

Fulton, 18; Gibson, 29; Grant, 16; Greene, 20; Hamilton, 25; Hancock, 27; Harrison, 11; Hendricks, 94; Henry, 23; Howard, 22; Huntington, 10; Jackson, 24; Jasper 12; Jay, 7; Jefferson, 21; Jennings, 13; Johnson, 28; Knox, 52; Kosciusko, 30; Lagrange, 8; Lake, 2; Laporte, 9; Lawrence, 21; Madison, 15; Marion, 87; Marshall, 7; Martin, 6; Miami, 35; Monroe, 12; Montgomery, 40; Morgan, 48; Noble, 11; Newton, 7; Ohio, 4; Orange, 6; Owen, 27; Parke, 108; Perry, 12; Pike, 11; Porter, 1; Posey, 31; Pulaski, 13; Putnam, 41; Randolph, 9; Ripley, 12; Rush, 26; Scott, 17; Shelby, 23; Spencer, 23; Starke, 5; Steuben, 2; St. Joseph, 13; Sullivan, 46; Switzerland, 18; Tippecanoe, 45; Tipton, 7; Union, 11; Vanderburgh, 32; Vermillion, 66; Vigo, 444; Wabash, 49; Warren, 22; War-
rick, 45; Washington, 14; Wayne, 83; Wells, 3; White, 24; Whitley, 1; unreported, 613.

FROM OTHER STATES.

The number attending from other States is as follows:

Illinois, 57; Kentucky, 6; Kansas, 2; Missouri, 3; New Hampshire, 1; New York, 1; Ohio, 17; Virginia, 1; West Virginia, 2; Iowa, 2; Minnesota, 1; Massachusetts, 1; Louisiana, 1; Pennsylvania, 3; Canada, 1.

THE SCHOOL.

I have set forth at length in former reports the purposes for which Normal Schools are maintained in this country, and have given in detail the method of procedure by which the Indiana State Normal School seeks to give to her students adequate preparation for the discharge of the responsible duties of teachers in our common schools.

Every department of industry is asking science what she has to give to it that shall enable it to pursue its aims by truer and speedier methods. The old way, the way of empiricism, in almost every field of labor, when viewed in the light of science, is found to be defective and a new and better method is invented. A machine is constructed that will do more work than a hundred men, and do it better. With every valuable mechanical invention some trade ceases to exist. No child has any assurance that if he learn any specific trade, he will not be forced

to compete with a machine in the practice of it. This is one practical result of the prevalence of the spirit of scientific inquiry.

Another result is that there is a growing demand for greater thoroughness, more exact and definite knowledge. The constructor of machinery is no longer satisfied to use twenty-five per cent. more material than is needed in his construction. He desires safety and no surplus. He appeals to the scientist, but he will not allow for mistakes. He demands that he whom he employs shall have accurate and thorough knowledge. We have not as yet a high standard of thoroughness, but this standard is rapidly rising in every department of labor.

There is reason to believe that there is a less imperative public demand that the teacher possess a thorough and scientific knowledge of his vocation. This arises partly from the fact that the teacher's errors are less readily detected than are the mistakes of a machinist. If he have a talent for maintaining order and holding the good will of his pupils, he may perpetrate menticide, murder the minds of his pupils, and escape detection. Nay, he may be courted and extolled. The low grade of ability and education required to "keep school" is not associated in the public mind with thorough and scientific knowledge of a great art. But time is beginning to wear the impression into the minds of the people that the results of mere "school-keeping" are not worth what they cost. They have, however, yet to learn that teaching is a "fine art"—the expression of a science more complex and profound than any employed in the other departments of labor. They have yet to learn that the value of the instruction received by the children in school depends wholly upon the moral, scholastic and professional attainments of the teacher who gives it. That the stream of influence from the teacher can not rise above the fountain within him.

The Indiana State Normal School has always taught that teaching in the common schools is a serious business, fraught with the gravest consequences to the child, and therefore to the State and the nation. This School has been a standing protest against the primitive notion that the only preparation for teaching required is mere learning. It has always maintained that there is a training of the heart and of the intellect needed which is peculiar to the teacher's vocation, without which no

person is worthy to enter upon the discharge of these sacred duties. To this end a course of study is pursued in the institution which gives (1) a thorough training in the various branches of learning; (2) a high ideal of the purposes of the Common School and of its relations to other institutions of society; (3) it leads the students to the conviction that the most valuable results of the teacher's work are to be found in the character he has helped the child to form rather than the amount of information he may have helped him to obtain; and (4) a thorough training in the practice of teaching by daily work in practice schools connected with the institution.

WHAT IS A NORMAL SCHOOL?

The word normal, as descriptive of a class of schools, has a purely technical signification. It limits the purpose of the school to the instruction and training of its students in that knowledge and practice which constitute the teacher as distinguished from the lawyer, physician, and the like. All intelligent persons, of whatever vocation, have certain kinds of knowledge in common. Each class or profession possesses knowledge and training peculiar to itself, and not possessed by other classes. The teacher, if worthy to be called such, has certain special possession of knowledge and art which are not possessed by intelligent persons in other vocations, which make him a teacher. It is the commanding purpose of a Normal School to give this knowledge and training. The term "normal" is often employed to name institutions of learning which do not give this kind of instruction, but when this is done it is a misapplication of the name, however valuable may be the instruction given by them. A Normal School is, therefore, a technical school, as different from the academy or the college as these are different from schools of medicine or law.

The State Normal School consists of two departments: one a department of instruction in the branches of learning, and in the theory of teaching; the other, a department of practice, in which students are trained in the art of teaching. Each student has work in each of these departments every day that he attends the school. The department of instruction, or the Normal School proper, is composed of the Faculty and students

who enter the institution for the purpose of preparing themselves to teach. The number enrolled in this department during the past year is 694.

The school year is divided into three terms of equal length. The enrollment in the Fall term is usually smaller than any other, while the Spring term is much the largest of the year. This is due to the fact that students teach during the Fall and Winter, and attend school in the Spring. Many persons are working their way through the school by attending one term each year. Those who enter in the Fall generally remain through the entire year. There is a greater number each year who enter for the entire course; which shows that there is a growing desire among the young teachers to make a thorough preparation. Although the progress of this sentiment is slow, there has been a marked advance in the past five years.

The other department of the Normal School consists of the training or practice schools, which are composed of the critic teachers and the teacher of methods, and two hundred children ranging in age from six to fifteen years, and separated into eight grades of advancement. These schools are the schools for observation and practice in teaching for the Normal students. In these they work a portion of each day under the direction and criticism of the critic teachers and the teacher of methods. All students, through this practice and training, graduate from the school experienced teachers.

COURSE OF INSTRUCTION.

The course of instruction in the Normal School has been modified in accordance with the direction of the Board of Trustees, so as to embrace three separate courses, adapted respectively to three classes of students. The regular course of three years is for that class who enter with only a common school education. A shorter course of two years, is for those who enter as graduates of commissioned High Schools. A strictly professional course of one year is intended for those who have completed a college course of study.

Since a large number of young men who graduate from college, design to teach for a time, and therefore seek positions as High School teachers, or superintendents of graded schools, it

is especially important to the public whom they are to serve, that they make some professional preparation before assuming such responsible duties. They possess the requisite scholarship, but have no knowledge of either the theory or the practice of teaching.

The following is the course prescribed for this class :

COURSE OF INSTRUCTION FOR COLLEGE GRADUATES—ONE YEAR.

First Term—Study of the work done in the Training Schools; Theory of the Common School; Psychology; Grammar and Arithmetic.

Second Term—Study of methods in Reading, Arithmetic, Geography, Grammar and Composition; Science of Education; Practice in teaching in the Training School; Reading or Geography.

Third Term—Study of the organization and classification of Graded Schools, and School Law; History of Education; Practice in teaching in the Training Schools; History of the United States, and methods of teaching it.

A capable graduate of a college can complete this course in one year, and thus prepare himself to direct the instruction and government of a system of graded schools, or of a High School.

“The National Journal of Education,” published in Boston, Mass., makes editorial comment upon this course of study as follows:

“A step in the right direction has recently been taken by President Brown, of the Indiana State Normal School. He has provided for a higher course of professional instruction for college graduates who propose to become teachers. In his inaugural address, Professor Laurie, of the Chair of Education in the University of St. Andrews (Scotland), pointed out the fact that a teacher who receives his technical training and his academic education simultaneously is likely to suffer from the shortening of his intellectual vision, and so lack in versatility and freedom. The fact is also alluded to by Mr. Fitch, in his Cambridge lectures. An ideal training would undoubtedly consist of a liberal education, supplemented by a special course of instruction leading to a profession. Thus the study of medicine or law should

follow the ordinary college course. And so the ideal education of a teacher should, first, be a liberal training and then a special training. The Normal Schools are undoubtedly doing the best they can, considering the limitations under which they must work. They must, so to speak, make the cloth and the coat simultaneously, though they would undoubtedly prefer to receive the finished fabric and then fashion it into specific forms. We think it a good omen that these schools are working toward a higher ideal, and we commend the movement at *Terre Haute* as worthy of admiration and imitation."

NEEDS OF THE SCHOOL.

The large increase in the number of students during the last few years, together with the considerable increase in the number of classes caused by the multiplication of the number of courses of study, make it imperative that a larger teaching force be employed. The present appropriation is insufficient to pay this force. An additional appropriation of at least \$5,000 per year will be needed for tuition, in order that the purposes of the Board of Trustees may be realized. The present appropriation of \$5,000 per year for contingent expenses has been barely sufficient to make the needed repairs, that were most pressing, and to pay the running expenses of the School. The same appropriation will be necessary for each of the ensuing two years, to complete other repairs and pay the contingent expenses.

The school is very poorly supplied with scientific apparatus to illustrate the different sciences. Some additional apparatus is absolutely necessary to the successful prosecution of the work of this department. There is not a Normal School in the Union so bare of these appliances as is this one. The interest in scientific study which has been awakened in the school as the result of the wise action of the Board in making this a separate department, has been very great, and the constantly increasing demands from the students call for a corresponding increase of facilities. We need an appropriation of at least \$2,000 for immediate use in this department.

The Normal School library is wanting in books of a professional character. There are not fifty books in the library bear-

ing upon teaching or upon the science of education in any of its departments. A library of professional literature is as necessary to the student preparing to teach as is a library of books on the theory and practice of law or of medicine to students of these professions. The poor and meager facilities of every sort that have been furnished this institution are unworthy the generous spirit of our great commonwealth. The Board should ask the Legislature for at least \$2,000, to be expended in the purchase of a professional library.

WHY THE STATE NORMAL SCHOOL SHOULD RECEIVE A GENEROUS SUPPORT.

First. The State Normal School is the only School in the State that has for its commanding purpose the education of teachers in the science and art of teaching, if we except the City Normal Schools in Indianapolis and Ft. Wayne, which are maintained to supply the schools of those cities with qualified teachers. There are about 12,000 teachers in the State, exclusive of those in the larger cities. Between 600 and 700 of these attend the State Normal School during a portion of each year. They are at work in every part of the State, are generally regarded by school officers to be among the best teachers in their respective localities, and through them the influence of the instruction given in the Normal School is extended throughout the State, and a rising standard of excellence is the result. The former State Superintendent, Hon. James H. Smart, after six years of observation, stated in his last report: "Wherever I go I find the graduates of the State Normal School doing the best kind of work, and I think that to their efforts is due in a large measure the rapid advance which our schools have made during the last few years." There is cumulative evidence that the school is exerting a strong influence, directly and indirectly, in producing a higher ideal of school teaching throughout the State. That this is needed none will deny. Much of the teaching done in our schools is so poor that it is a serious question whether the teacher is not inflicting a positive and permanent injury upon the children.

Second. There are nearly \$5,000,000 expended every year in this State for Common School purposes. Whether the peo-

ple shall receive an adequate return for this will depend upon the efficiency of the teacher who instructs the children. Good buildings, sufficient apparatus, good Superintendents are all important, but they can not make a good school. The immediate cause of a good school is a good teacher. Since good teachers are not born such, schools must be maintained to provide them.

Shall a State that provides free tuition for the children provide also free professional training for the teacher? Every civilized nation has answered this question in the affirmative. In Europe they have gone farther, requiring that every teacher shall receive a professional education before beginning to teach. Nearly every State in the Union has give an affirmative answer; some of these having as many as eight Normal Schools maintained by the State. It is in accord with all past experience and with reason that education can not be carried on as a business enterprise successfully. If it is a business success, the educational product is of a poor quality. If a worthy standard of education is maintained, the enterprise is sure to be a business failure. There is the possible exception of a few kinds of technical schools, which open the way to the attainment of great wealth or honor; but these are not for the mass of the people. It will be found upon investigation that every institution of high rank is an institution richly endowed either by private munificence or by the State.

Third. There is one other reason why the State Normal School should receive liberal support: It prepares its students for the immediate service of the people. The Normal student goes back to his home, and as teacher of the country or village school, makes immediate return to that community in the better service he renders of an equivalent for the cost of his education. A good teacher costs that community but little more than a poor one, but the difference in the results accomplished is an infinite one. This intimate relation between the Normal School and the people is a peculiar one, and makes the Normal School perform a service to the public not performed by other institutions.

PROGRAM OF THE REGULAR COURSE OF STUDY.

1st Term.	Observation in Training School.	Reading.	Arithmetic.	Grammar.	Penmanship, $\frac{1}{2}$ Term. Orthography, $\frac{1}{2}$ Term.	
2d Term.	Theory of the Common School.	Reading.	Arithmetic.	Grammar.	Geography.	
3d Term.	Methods in Reading and Number.	Physiology.	Arithmetic and Book-keep'g.	Grammar.	Geography.	Latin, (Optional).
4th Term.	Psychology (Intellect).	U. S. History.	Algebra.	Composi- tion.	Geography, $\frac{1}{2}$ Term. Music, $\frac{1}{2}$ Term.	Latin.
5th Term.	Psychology (Intellect).	U. S. History and Civil Government.	Algebra.	Music.	Drawing.	Latin.
6th Term.	Science of Teaching.	Methods in Geography, Grammar and Composition.	General History.	Rhetoric.	Physics.	Latin.
7th Term.	Observation and Practice in Training Schools.		General History.	Themes.	Chemistry.	Latin.
8th Term.	Organization and Classification of Schools and School Law.	Observation and Practice in Training Schools.		English Literature.	Lectures in Astronomy and Geology.	Latin.
9th Term.	Philosophy and History of Education.		Geometry.	Grad. Thesis.	Botany.

GEO. P. BROWN,

President of Faculty.

SECRETARY'S REPORT.

TERRE HAUTE, IND., November 1, 1882.

HON. MURRAY BRIGGS, *President Board of Trustees,*
Indiana State Normal School:

DEAR SIR—I herewith submit a statement of the receipts and expenditures for the fiscal year ending October 31, 1882

TUITION FUND.

Receipts.

November 1, 1881, balance in hands of	
Treasurer	\$6,226 86
January 1, 1882, received from school fund	7,500 00
June 1, 1882, received from school fund...	7,500 00
Total	<u>\$21,226 86</u>

Expenditures.

Paid teachers, November 25, 1881.....	\$1,554 83
Paid teachers, December 23, 1881.....	1,486 33
Paid teachers, January 27, 1882	1,488 83
Paid teachers, February 24, 1882.....	1,481 33
Paid teachers, March 24, 1882.....	1,485 33
Paid teachers, April 21, 1882.....	1,655 58
Paid teachers, May 19, 1882.....	1,643 33
Paid teachers, June 16, 1882.....	1,787 20½
Paid teachers, June 19, 1882.....	416 66
Paid teachers, September 29, 1882.....	1,673 83
Paid teachers, October 27, 1882.....	1,684 83
Total	<u>\$16,358 08</u>
October 31, 1882, balance in treasury.....	4,868 77
Total.....	<u><u>\$21,226 86</u></u>

BUILDING FUND.

October 31, 1882, balance overdrawn.....	\$1 95	
Total.....		<u>\$1 95</u>

INCIDENTAL FUND.

Receipts.

January 1, 1882, received appropriation for 1882.....	\$5,000 00	
February 3, janitor fees, balance Fall term	18 67	
February 3, janitor fees, balance Winter term	223 00	
Received from Trustees Terre Haute pub- lic schools, repairs.....	465 58	
May 22, janitor fees, balance Winter term	3 00	
May 22, janitor fees, Spring term.....	403 00	
October 31, janitor fees, balance Spring term.....	2 00	
October 31, janitor fees, Fall term.....	234 00	
Total.....		<u>\$6,354 25</u>

Expenditures.

November 1, 1881.

Amount overdrawn.....	\$2,566 13	
Amount paid Trustees—		
Joseph Gilbert, fifty days and expenses	\$252 00	
B. C. Hobbs, fifteen days and expenses	117 30	
George I. Reed, eleven days and expenses	112 30	
Murray Briggs, ten days and ex- penses.....	80 00	
John M. Bloss, ten days and ex- penses	75 25	
		<u>636 85</u>
Amount paid F. Grosjean, janitor	503 00	
Amount paid John Hall, engineer.....	37 50	

Amount paid balance on one-half of heating apparatus.....	\$933 00
Amount paid for heating building, six months	825 00
Amount paid for coal.....	210 87
Amount paid waterworks.....	90 00
Amount paid for gas bills.....	328 10
Amount paid Trustees Terre Haute public schools for repairs.....	116 63
Amount paid for repairs, carpenter work and material.....	308 32
Amount paid for repairs, glass and painting.....	96 35
Amount paid for heating apparatus.....	62 37
Amount paid for repairs, plastering.....	44 70
Amount paid for repairs, roof.....	47 95
Amount paid for repairs, grounds.....	17 88
Amount paid for repairs, carpets and shades.....	74 40

THIRTY-FOURTH ANNUAL REPORT

OF THE

TRUSTEES AND SUPERINTENDENT

OF THE

Indiana Hospital for the Insane,

FOR THE

FISCAL YEAR ENDED OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received November 21, 1882, examined by the Governor, referred to the Auditor of State for verification of financial statements, and delivered to the Secretary of State to be filed and preserved in his office, and printed as may be directed by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, October 22, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, do hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in my office November 23, 1882.

E. R. HAWN,
Secretary of State.

OFFICERS.

BOARD OF TRUSTEES.

JOHN FISHBACK, President,
R. H. TARLETON, M. D., } Trustees.
B. F. SPANN, M. D., }

SUPERINTENDENT.

JOSEPH G. ROGERS, M. D.

ASSISTANT PHYSICIANS.

J. C. WALKER, M. D., } Dept. for Women.
J. N. SMITH, M. D., }
A. J. THOMAS, M. D., }
W. H. HUBBARD, M. D., } Dept. for Men.
J. R. BROWN, M. D., }

BOOK AND STORE KEEPER.

M. L. STANSBURY,
B. V. HUBBARD, Assistant.

REPORT OF TRUSTEES.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

SIR—The Board of Trustees of the Indiana Hospital for the Insane, has the honor to submit the following report, with accompanying documents, for the fiscal year ending October 31, 1882.

The appended inventory shows the estimated value of the property of the Institution to be:

Real estate.....	\$1,324,650 00
Personal property.....	105,358 15
Total.....	<u>\$1,430,003 15</u>

The Revenue:

For maintenance.....	\$245,000 00
For clothing.....	12,000 00
For repairs.....	7,500 00
Total.....	<u>\$264,500 00</u>

The Disbursements have been:

For maintenance proper.....	\$210,947 12
For improvements and repairs.....	5,743 40
Total for maintenance.....	<u>\$216,690 52</u>
For repairs.....	7,490 84
For clothing	9,338 48
Total from all funds.....	<u>\$233,519 84</u>

The balance unexpended is \$30,980.16.

This, according to law, will be carried forward to the current fiscal year ending October 31, 1883.

The revenue from sales and donations, \$429.52, has been regularly covered into the general fund of the State Treasury monthly.

The average daily number of inmates during the year, have been one thousand and eighty-five; the *per capita* expense *per annum*, has been \$194.

The practical results of the year are fully set forth in the Superintendent's Report, herewith transmitted.

They compare favorably with those of institutions of the best class elsewhere.

The completion of the department for women is again respectfully urged. The need for increased accommodations is far beyond present capacity.

Seventy-nine cases were rejected during the year, and over two hundred chronic cases were discharged, on this account solely.

The necessity for a central warehouse for the receipt, care and issuance of supplies of all kinds, referred to in former reports, is more than ever apparent; and it is earnestly hoped that it may be promptly met.

A house for storage of coal at each department, with conveniences for receiving and delivering into boiler rooms, is another necessity perhaps still more urgent.

For these purposes a specific and immediately available appropriation is asked as follows:

For completion of Department for Women.....	\$40,000 00
For furnishing same.....	10,000 00
For warehouse.....	5,000 00
For coal houses.....	5,000 00
Total.....	<u>\$60,000 00</u>

A detailed consideration of these wants is fully given in the Superintendent's Report to which you are respectfully referred.

Attention is further called to the discussion therein contained of the needs of the insane population of the State not yet in any way provided for, with the earnest hope that your Excellency may feel impelled to urge before the General Assembly prompt and adequate action for the relief of all of this helpless class, as the Constitution directs.

There will be required for the fiscal years ending October 31, 1884, and October 31, 1885, an annual appropriation, \$272,000, for the general maintenance of the Hospital for the Insane, including wages, subsistence, furnishing, clothing, repairs, and minor improvements.

This estimate is based on an expectation of a completion of the department for women and a total population of between thirteen and fourteen hundred inmates. This sum is the same appropriated for the current and ensuing fiscal years, plus \$7,500 which will be needed on account of repairs, the special fund for that purpose, \$7,500, having repeatedly been shown to be insufficient for the maintenance of the \$1,300,000 worth of buildings, etc., belonging to the Institution.

It is the experience of the Board that special subdivisions of the fund appropriated for the maintenance of the Hospital is impolitic, inconvenient and unnecessary.

The Act of 1879 requires that it shall be specifically set forth, in the annual report to the Governor, how much may have been disbursed for repairs, how much for improvements, and how much for current expenses. This requirement meets the same end as does the division of the appropriated fund, and is devoid of the unwise and detrimental inconvenience of that method. During the year the interior wall surfaces of the Department for Men have been repaired and thoroughly repainted, much to the improvement of the sanitary state of the house.

The six boilers of the same house, said to have been in use for thirteen years, being in an unsatisfactory state, were recently extensively repaired and entirely reset in the most approved manner. Those of the Department for Women were, at the same time, thoroughly renovated, and the furnaces repaired and improved.

The sewer system has been extended to low water in Little Eagle Creek, in order to insure, at all seasons, a thorough removal of its discharge.

These constitute the more important improvements made during the year. Many others, too numerous to mention, have occupied the regular force of Hospital mechanics and, in the aggregate, have added largely to the comfort and convenience of the Institution.

The productiveness of the farm has largely increased, and

the table of products in the appendix makes an extraordinary exhibit when the small amount of land cultivated is considered. The need for more land for cultivation is a pressing one. The land is available at reasonable prices, and an appropriation of \$10,000 is urged for this purpose. Forty acres in garden and forty in pasture is all that the Hospital now owns outside the park. This is a very little for a population of fourteen hundred. Four times as much could be profitably purchased and used. The occupation which it would afford inmates has always been considered an important element in their management and cure.

In conclusion, we feel a conscientious satisfaction in being able to report to your Excellency that the general condition of the Hospital is good; that its march of improvement is constant, and that its officers are earnest and efficient in the fulfillment of the trust confided to them. Of the attendants and other employes, whose daily and nightly duty it is to live with and care for the insane, too much can not be said in praise of the practical kindness, as well as brave efficiency, with which they, as a body, have performed their irksome and riskful duties.

Respectfully submitted,

JOHN FISHBACK,
B. F. SPANN,
R. H. TARLETON.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees:

Conformably to law, I have the honor to submit the thirty-fourth annual report of the medical, financial and general history of the Indiana Hospital for the Insane for the fiscal year ended October 31, 1882, with suggestions of its needs for the future.

Medical History. There were resident at the beginning of the year 1,065 patients; admitted during the year, 762; discharged, 742; resident on the last day of the year, 1,085. The average daily number of inmates was 1,085; the whole number treated, 1,827.

Of the discharged, 378 were restored, 121 improved, 116 not improved, 10 not insane, 2 idiotic and 105 died.

The ratio of recoveries on admissions is 48 per cent.; of deaths on the whole number treated, $5\frac{6}{10}$ per cent.

Of the admitted, there were 310 cases of acute mania, 232 of chronic mania, 104 of melancholia, 40 of epileptic mania, 16 of dementia, 26 of paretic mania, 6 of paralytic mania, 9 of affective mania, 9 of dipsomania, 1 of simple epilepsy, 2 of idiocy, and 7 were not insane.

In this classification, subdivision of acute and chronic mania, melancholia and dementia have been avoided, as unnecessary in a document of this kind, and all types of epileptoid disease, in which insanity proper was in any way manifested, have been grouped together. A difference, however, has been made between mania associated with paralysis of sudden centric origin and mania with progressive paresis. Affective mania is recognized, and into this class have been collected cases manifesting only abnormalities of feeling and conduct, without defect of perception, memory, ideation, and reason.

Of those discharged recovered (378), 214 were cases of acute mania, 83 of chronic mania, and 56 were melancholics. Thirteen cases of epileptic mania, were sent home after having been relieved of all spasm or mental disturbance for many months. One case of paralytic mania, (mania with paraplegia), has also a place in the list of the recovered. Three cases of affective mania, and eight of dipsomania, make up the total.

Of the whole number treated, (1,827) nearly 450 were cases of acute mania. Of these, 39 terminated fatally. Of about 1,000 cases of chronic mania, 28 died. Of 43 cases of paretic mania, 22 succumbed, and the inevitable doom of this fell disease will reach the rest sooner or later. Four epileptics were carried off by cerebral effusion. Eleven of the class of melancholics, always an easy prey, were removed by various inter-current conditions. The immediate causes of death are shown in detail in Table IV of the Appendix. Special attention is again called to the frequency of heart-clot among the insane. The frequent arteritis and malnutrition are doubtless provocative of it. Among the hundreds of inmates possessed of suicidal propensities, two succeeded in putting an end to their distressful lives. Both cases were investigated by the County Coroner and his verdicts, exculpating those in charge, are on file.

Asphyxia resulted in a case of paresis from accidental inhalation of liquid food. Consumption has claimed and unusually small proportion, 5.

Heredity. One of the anticipated good results of the Act of 1881, relating to lunacy inquests, was the very greatly increased facility of developing the antecedents of the insane patient, and his family history. In this light, tables V and VI, exhibiting causes and hereditary relations, are especially interesting. They have been deduced from a careful examination of the 762 transcripts of the proceedings committing the number admitted during the year. Of this number 249 were supposed to have a good family record. In 254 cases their history was unknown by the party making the allegation of insanity. In 249 there was marked evidence of hereditary predisposition to nervous disease or vicious defect. To these 249 cases belonged—1 idiotic relation; 4 choreic; 2 paralyzed; 8 born deformed; 3 criminal; 21 hysterical; 23 epileptic; 48 tuberculous; 60 intemperate in use of alcoholic liquors, and 219 insane.

Could the truth be known in this relation regarding the 254 whose family history could not be discovered at the inquests, this lamentable array would be largely magnified, for this class is the ultimate of a gradual degradation, physical, mental, moral and social, operating through generations, till, at length, the individual has become nothing better than a mass of scarcely animated matter; vagrant, without a local habitation, without friends, without a record and, sometimes, even without a name; repulsive alike in body and spirit to all who come in contact with him. The corruption in such lineage is so thorough and so rapid as to leave no trace behind.

The defective physical organization reproduces itself, and a sound mind can only be in a sound body. With each succeeding reproduction defects are magnified, whether physical or mental, each assisting the other in the retrogression. The history of the Duke family is not singular; it has its analogues everywhere and in all times. In the process of regeneration the unnoticed germ of defect continually involutes, and, finally, disease or vice, or crime, or mania, is the harvest. It is a fortunate law of nature, however, that bad stock can be improved, and sometimes this march of human degradation is stopped and a higher grade of development is again attained. This is generally an accident, for man is known to be very careless regarding the improvement of mankind, and fails to use the science which he so carefully applies to lower creatures. Sooner or later, however, he will be forced to see his error, and will then ask the sociologist what shall be done to be saved.

Sanitary Condition. The general health of the population has been in the main excellent throughout the year, it being considered that the majority are physically feeble and that this is a hospital. The annually recurring endemic of summer diarrhoea and dysentery was this year unusually mild and limited in extent and duration. This fact may be attributed to the absence of the usual long heated term, which, in my opinion, is the predisposing cause. This relatively low temperature and excessive moisture long continued, however, here as elsewhere in this region, seemed to be the provocation of an endemic of typho-malarial fever, which invaded the department for men mainly, and held its sway for nearly two months, during which time there were over twenty cases, chiefly among employes.

Two of these, Mr. Jos. Shultz and Mr. H. W. Bunn, died. In this connection, I take a regretful pleasure in being able to pay tribute to their memory in an official recognition of their eminent usefulness in the care of their charges and of the high estimation in which they were held by patients, employes and officers. Their loss was a serious one to the hospital, and their good work will be long remembered.

Improvements. As an important sanitary measure, as well as a source of aesthetic comfort to the inmates, the interior walls of all the wards of the Department for Men were, during the year, thoroughly well painted and plainly but tastefully ornamented. I would urge that the same work be done in the Department for Women. Its importance as a means of preventing the lodgment of disease germs can not be overestimated. The main sewer has been extended to the low water mark of Little Eagle Creek, and now much more efficiently discharges itself into that natural sewer. The system has been further improved by the construction of additional ventilating shafts, cess pools and catch-basins. External trapping and special ventilation of all soil pipes according to the best systems of modern sanitation is now being done, and when completed the general plan will be as good as the best. All old water-soaked walls and wainscoting have been removed and replaced by water-proof work. A new floor of hard pine has been laid in M ward, and the material thus far has been found to be very satisfactory, being susceptible of a high polish and unchangeable in shape. Most of the elaborately-shaped rain leaders on the Department for Women, having been found to be very defective, have been removed and replaced by substantial straight pipes, strongly hung on iron rings two inches away from the walls. The result has been very satisfactory.

Agricultural. The year has been a fortunate one in an agricultural sense. This fact, and very extensive fertilizing, has secured a large return from the gardens. Enough, perhaps, for the winter's consumption, of nearly every variety of vegetable products, excepting potatoes, which can be more cheaply bought than cultivated, for winter use. The table of farm products, in the appendix, fully exhibits the detail. Experiments in root crops for cattle were very eminently satisfactory. Ten tons of mangel wurzel were produced from a quart of seed,

on very little ground. The paucity of pasture land makes the maintenance of the herd of milk cattle very expensive, as it forces the purchase of a large amount of provender in every season of the year. The cultivation and use of roots will, perhaps lessen this expense, which, the past year, has reached the sum of \$3,500.

In further promotion of the same end, after careful investigation of the subject, I am prepared to recommend the construction of a silo, for the preparation and keeping of ensilage, to be made from various kinds of fodder readily obtainable from our own and neighboring farms. The product of a single acre so managed, will be the practical equivalent of that from ten as usually cured for winter use, if the extensive experiments in this country, and the reports of the French government, can be trusted.

Financial. The appropriation for maintenance for the year was \$245,000. The disbursements from this fund, less \$5,743.40 necessarily used for inevitable repairs, were \$210,947.12. The average expense *per capita, per annum*, has been \$194, an increase of \$10 upon each of the three preceding years. This was due to very greatly increased cost of subsistence, especially meats and breadstuffs.

The appropriation for repairs was \$7,500. This very inadequate sum was exhausted at the end of the fifth month of the year, and, as in previous years, the deficit was, perforce, made up from the general maintenance fund.

The appropriation for clothing was \$12,000. The disbursements were \$9,338.48. Had the Hospital been completed and filled with inmates, as was anticipated, there would have been no residue of any fund. As it is, there is a surplus of \$30,980.16, of all funds, unexpended.

Appropriations Required. Assuming that the Department for Women will be soon finished and occupied, the experience of the recent past justifies a continuance of present appropriations for maintenance and clothing, they having been originally based on the expectation of such completion and a population of over thirteen hundred inmates. The so-called repair fund has, each year since 1879, been found to be insufficient and uselessly inconvenient on account of the absolute impossibility of accurately separating its items of expenditure

from other current expenses. Therefore, it is recommended that but a single appropriation for maintenance be made, and that this shall cover all demands for wages, subsistence, furniture, clothing, repairs and minor improvements. Its subdivision has been found to be detrimental to the welfare of the Institution, for special needs can not always be foretold, and when such occur beyond reach of the special appropriation to which they belong, they must go unmet, and the service correspondingly suffers. The plan at present in vogue, is contrary to the principles of political economy, and it is hoped that it may be discarded for one which is.

The Completion of the Department for Women. Again for the third time, annually, is it necessary to call attention to the fact that a large part of this building remains in an unfinished and uninhabitable state, on account of lack of specially appropriated funds, no work having been done upon it for that length of time. In the meantime, during the past year alone, over one hundred women have been discharged, unfit to go, but who must go, some where, to make room for the recent and assumably curable cases constantly arriving. Most of these reach the poor houses; not because they are paupers, but because they can be cared for nowhere else, excepting it be in the jails. Moreover, forty-three cases (women) were rejected during the year, entirely eligible as inmates, solely because of lack of room, for the chronic class. I beg to reiterate further, that there are twenty-five hundred insane persons in the State, while the hospital has present capacity for only eleven hundred. Two hundred and twenty more women can be accommodated after the completion of the unfinished eight wards of the north wing, and this can be done in ninety days after the receipt of the appropriation. Forty thousand dollars are asked for this work, and ten thousand to furnish these wards. These estimates are based on the most careful and detailed calculations and are deemed to be neither more nor less than will be required.

Coal Houses. The annual consumption of coal is about 5,000 tons. It is received by rail, unloaded by hand at considerable expense, stocked in open yards, exposed to the weather and wheeled in handbarrows by attendants and patients into the boiler rooms as needed. This very laborious work requires about twenty men for several hours daily, and in inclement

weather becomes a very positive hardship. Frost bites are not infrequent in winter and overheats in summer. A large coal vault, with walls, roof and elevated tracks for dumping cars, etc., at each department, is much needed and their construction and economic use are entirely feasible. Five thousand dollars are asked for this purpose.

Warehouse. The need for a central warehouse for receiving, storing, and issuing supplies, grows more and more pressing. In all the vast mass of buildings pertaining to the Institution, there is no place at all adapted to this use. To a certain extent waste and spoilage are unavoidable, especially on account of temperature. Its special features should be a large room for cold storage of meats, vegetables, fruits, etc., a flour room, to contain a month's supply, (one hundred and fifty barrels), a butcher's room, a bakery, a large root and vegetable cellar, a store for groceries and other goods, an office and quarters for employes, of which there is also a lack. Five thousand dollars are asked for its construction.

A resume of appropriations required is as follows:

For completing the department for women.....	\$40,000 00
For furnishing the same.....	10,000 00
For warehouse.....	0,000 00
For coal houses.....	5,000 00
	<hr/>
Total specific, avilable at once.....	\$60,000 00
	<hr/>
For general maintenace, including wages, subsistence, furnishing, clothing, repairs and minor improvements, for the fiscal year ending October 31, 1884.....	\$272,000 00
	<hr/>

For the next ensuing fiscal year the same amount.

The Uncared for Insane. The problem, What shall be done for those who still remain uncared for? is one which demands immediate solution. The department for men is at all times crowded to its extreme capacity. The completion of the women's department will not obviate the necessity for discharging or rejecting, annually, a large number of insane men who should be under asylum care. More than a thousand insane persons are necessarily scattered over the State outside of hos-

pital. Of their existence the great and good-hearted public is ignorant, and of how they are kept and treated it knows nothing. Those who are in a position to know, feel that this helpless class should be under the watchful eye, as well as the ministering hand, of the State.

Indiana, with her vast resources and thriving population of two millions, should stand abreast, at least relatively, of her sister States in the maintenance of her public charities; but she has not. Her people so ordered thirty years ago, in the State Constitution, in which the care of the insane is made obligatory on the part of the Legislature. Yet it has been only partially done.

Ohio, in six asylums, and Illinois, in five, each provide well for nearly four times as many as Indiana, and nearly twice as many as she has within her borders altogether, although but 20 per cent. more populous. Kentucky, in three institutions, cares for twice as many. Michigan has two large institutions and is building a third. Wisconsin, Iowa, Missouri, Kansas, Nebraska and California have provided in advance of future need; and most other States have done as well, even the poorest and weakest. Why should not the fifth State in the Union do likewise? If proof be demanded that this need for more extensive provision does pressingly exist, let the Legislature attach a penalty to section 6,337 of the statutes, and enforce a careful enumeration of the State's insane; or, let it be done more thoroughly by a special Commissioner, whose duty it shall be to report, not only numbers, but conditions and methods of care now in vogue.

Having in view existing circumstances, it is the dictation of experience that the State should at once institute the construction of a central hospital with a capacity for about 400 patients, for the care and cure, if possible, of the recently insane, and convert the present institution, by certain inexpensive internal alterations and additions, into an asylum proper for 1,800 chronic inmates. Nearly all of our insane population could then be properly cared for, for life, if necessary, better and at a much less aggregate expense than in County Poor Houses.

When this, or its equivalent, is done, and not till then, the obligation of the ninth Article of the Constitution, certainly one of the most sacred therein, will have been fulfilled. This should be felt to be an individual obligation by every member

of the next General Assembly, for in every constituency, are to be found families who are obliged to keep an insane skeleton-in-the-closet, and who would appreciate such relief more than any other good which could come to them.

The separate care of the chronic insane may be antagonized by high authority, but the practical results of the great asylum at Willard, New York, for this class, sufficiently answers such opposition; and, moreover, the present possession of an institution so well adapted to this purpose, on account of its great size, would seem to force upon the State the adoption of the proposed plan, that is, to provide a Hospital competent in size and appointments to care for all recent and curable cases, and to convert into, and fill as an Asylum proper, the existing institution.

Especially from an economic standpoint does this scheme commend itself. The most desirable and approved provision for the chronic class alone, can be secured at a very much less expense *per capita*, than is absolutely necessary for either the recent, or the mixed population of both grades.

A separate classification and care, certainly presents decided financial advantages, and besides has many others not necessary to be detailed.

Organization. The organization has remained without change during the year, excepting the institution of the grade of Medical Interue in March, and that of Third Assistant Physician in September. Dr. John R. Brown, of Columbus, most acceptably filled the first position until his promotion to the latter, in which capacity he has been a very useful member of the medical staff.

The general *morale* of the institution has been very satisfactory, and I am pleased to have an opportunity to recognize the earnest effort and good work of employes and officers generally. With thanks for your continued support and consideration, and a trust that continued welfare may be vouchsafed the Hospital for the Insane,

I am, very respectfully,

JOS. G. ROGERS,
Superintendent.

TREASURER'S REPORT.

*To the Honorable Board of Trustees
of the Indiana Hospital for the Insane:*

GENTLEMEN—I have the honor to submit the following statement, pertaining to my acts as Treasurer of your honorable body, for the fiscal year just closed.

Very respectfully,

R. H. TARLETON, *Treasurer.*

November, 1882.

During the year I have drawn from Treasurer of State, on warrants from the Auditor of State upon certified schedules of accounts, audited by the Board of Trustees, the following sums, to-wit:

December 8, 1881	\$20,229 57
January 5, 1882.....	19,218 62
February 9, 1882.....	18,903 04
March 9, 1882	19,512 98
April 6, 1882	17,279 39
May 4, 1882	22,999 76
June 5, 1882.....	19,833 26
July 6, 1882	17,774 81
August 10, 1882	19,51 521
September 7, 1882	19,757 08
October 5, 1882	18,478 84
October 31, 1882	17,910 98
Total	<hr/> \$231,419 84

I have paid accounts on orders of the President of the Board :

WHEN PAID.	Mainten- ance.	Repairs.	Clothing.	Total.
December 9, 1881	\$18,772 86	\$540 30	\$916 41	\$20,229 57
January 6, 1882.	16,914 77	931 01	1,372 84	19,218 62
February 10, 1882.	16,371 42	1,538 66	992 96	18,903 04
March 10, 1882	16,924 23	1,806 40	782 35	19,512 98
April 7, 1882	14,392 05	1,726 61	1,160 73	17,279 39
May 5, 1882	21,337 45	947 86	714 45	22,999 76
June 6, 1882	19,168 90	664 36	19,833 26

REPORT OF BOARD OF TRUSTEES.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

We have the honor to submit our report for the year ending October 31, 1882.

The business transactions of the Institution are so fully set forth in the report of the Superintendent, herewith submitted, that but little remains to be said by ourselves.

The most important matter to which we desire to call the attention of your Excellency, is the necessity of increasing the capacity of the buildings, to accommodate the deaf and dumb of the State.

The Board of Trustees, in their annual report of 1878, called attention to the necessity that then existed for enlarging the buildings of this Institution, in order to accommodate the increased number of deaf and dumb in the State. In that report the following language was used:

“Owing to an increase in the number of applicants for the benefits of the Institution, far beyond the capacity of the buildings for their accommodation, we have thought it best, under the pressing necessities of the case, to receive of applicants only those over the ages of ten and twelve years, for females and males respectively. After making these and other restrictions in admissions, * * * it is still found that a large number seeking admission, and who ought to be under instruction, can not be accommodated. We have given this subject careful consideration, and it seems to us imperatively necessary that, at as early a day as practicable, further provision for the education of this class of unfortunate children

should be made; provision for their present and prospective wants, commensurate with the increased and increasing population of the State.

“From data in our possession, there are, at the lowest estimate, not less than one hundred of this class in the State, of the age of eight years and upwards, who are now importunately seeking the benefits of the Institution.”

In our annual report of 1879, we call attention to the same subject, in the following language :

“We present, herewith, a diagram of a plan, prepared by Edwin May, architect for contemplated enlargements of the buildings. The cost of these proposed additions to the buildings, estimated by him, was \$56,367.69. We call attention to these to show how the buildings might be enlarged, and the probable cost of making such improvements.”

Also, in our report of 1880, we again call attention to the subject as follows :

“The large number of applications for admission to the School, which have been standing for several years, and the fact that there are more than one hundred children who are unjustly deprived of the advantages given to the more fortunate of their class, and in view of the further fact that the increasing population of the State will continue to increase the number of children entitled to the benefits of this Institution, we believe it to be the duty of the Legislature to take immediate steps to provide additional room in connection with the present buildings, and respectfully request that you will direct their attention to this matter.”

The same necessity, and even a greater, for enlarging the buildings, exists now as then, as will be seen from the Superintendent's report, that a large number of applicants had to be refused admission for want of room to accommodate them.

We most respectfully commend this subject to your Excellency's attention, and request you to recommend it to the early and favorable consideration of the Legislature about to assemble.

COST PER CAPITA.

The cost per capita, for the year ending October 31, 1882, excluding clothing furnished pupils and the earnings of the Institution, was one hundred and fifty-six and thirty one-hundredths (\$156.30) dollars.

APPROPRIATIONS.

The appropriations made by the last Legislature for each of the fiscal years of 1882 and 1883, was \$55,000, for current support, and \$3,000 for repairs, but in view of the necessity of extraordinary repairs, as fully set forth in the report of the Superintendent, it will require the sum of \$62,000, including current support and repairs, for each of the years 1884 and 1885.

Since the management of the Institution has acquired the habit of showing each year an unexpended balance of appropriations, they feel that the Legislature are justified in making reasonable appropriations, with the assurance that the officers of the Institution have adopted the principle that the people's money should be expended with the greatest care and circumspection.

Discarding the observance of mere form, the Trustees believe that they would not have done their duty, should they close their report without testifying their high appreciation of the services of the Superintendent, officers, and teachers, of the Institution.

The good condition of the buildings and property; the economical expenditure of money; the progress in scholarship; the health and comfort of the pupils, and good discipline, all bear testimony as to the good results of their labors.

Respectfully submitted,

JOHN FISHBACK, Pres.,

J. A. CRAVENS, Sec.,

M. JAMES, Treas.,

Trustees.

REPORT OF THE SUPERINTENDENT.

To the Board of Management :

GENTLEMEN—During the year ending on the 31st of October, there were admitted and entitled to instruction in this Institution 383 pupils. Of these, 206 were boys and 177 girls, representing eighty-four of the ninety-two counties in the State.

During the same period forty-one pupils were dismissed, leaving 342 entitled to the benefits of the Institution for the ensuing term. Of those dismissed, a large majority had completed the course of instruction, or the period of time allotted to pupils in this Institution; two were removed by death, and a few others were dismissed, or dropped from the roll, for the reasons set forth in the accompanying classified statement, to which you are respectfully referred for more specific information.

At the opening of the present term of school there were on file 113 applications, asking admission to the Institution; of these I admitted 57, and 56 I was compelled to postpone for the want of room in the buildings to accommodate them. Since the beginning of the term I have received a number of applications, and letters of inquiry from parents desirous to have their children admitted into the Institution.

From these facts, and from the increasing anxiety of parents to have their mute children educated, it is reasonable to conclude, that the number of applications for admission to the Institution, at the opening of the next term of school, will be as great as it was at the beginning of the present, and, if so, within the limits of the present accommodations, it will be equally impossible to admit them all, and a large number will have to be refused the right and privilege to enter upon their education until some future time.

The number of deaf mutes seems to increase in about the same ratio as the population of the State; and the only means apparent to meet the increasing demand for mute education in the State, is to enlarge the buildings of the Institution so as to accommodate all who are of proper age, and possess the ability to receive an education.

I trust you will give this matter your earnest consideration, and present it to the attention of the proper authorities in your report, so that the necessary relief may be granted at the earliest time possible.

HEALTH.

There were five cases of typhoid fever among the pupils; two of these terminated fatally: Anna L. Cotton, in the sixteenth year of her age, died December 18, 1881; and Alfred M. Carroll, in the seventeenth year of his age, died on the 22d day of the same month. The other three cases were of a milder type, and yielded readily to medical treatment.

Several cases of malarial fever in a mild form, and some cases of chills, occurred during the term. With these exceptions, the health of the pupils throughout the school year was very good.

Strict attention to the sanitary regulations of the Institution; the uniform care and watchfulness of those who have charge over the children, together with the prompt attendance, and skilful treatment by the physicians, tend to reduce disease and sickness to their minimum in so large a community living within the limited space of these buildings during nine consecutive months of the year.

DEATH OF PROFESSOR HORACE S. GILLET.

The death of Professor Horace S. Gillet occurred at his residence, in the city of Indianapolis, on the 6th day of February, A. D. 1882. Mr. Gillet was in the seventy-second year of his age, and he had been engaged in instructing the deaf and dumb for a period of forty-one years; twenty-five years and seven months of this time, from July, 1856, to February, 1882, he was teacher in this Institution.

On the 16th day of January, Mr. Gillet was attacked with

what appeared to be a mild form of typho-malarial fever, and on the 30th he felt sufficiently recovered to visit his class in the Institution, where he remained until noon, when he was taken home, not to return again; and on the evening of the 6th of February he went to his final rest after his life-labors were done—and well done.

At the close of a life spent in labor and love for the unfortunate, and with unfaltering faith in his Redeemer, Mr. Gillet, appropriately and truthfully, could have adopted the language of Paul, and said:

“I have fought a good fight; I have finished my course; I have kept the faith; henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give to me at that day.”

The following minute, adopted by the Board of Trustees of this Institution upon the announcement of the death of Mr. Gillet, so clearly indicates the estimation in which he was held not only by the Board, but by all who were intimately acquainted with him, that I incorporate it as the conclusion of this necessarily brief notice.

WHEREAS, Horace S. Gillet has been employed as a teacher in this Institution since July 3d, A. D. 1856, until his connection therewith was terminated by death on the 6th day of February, 1882, a period of time exceeding a quarter of a century, through all of which he was an earnest, a sincere, and a conscientious laborer in the cause of deaf mute education; a man of quiet and unassuming manner, but of a high order of intellectual powers; pure moral and Christian character; of unswerving integrity, and unfaltering devotion to duty;

Therefore, We, the Board of Trustees, enter of record our high appreciation of the worth and merits of Horace S. Gillet, as a man, a citizen, and a faithful, efficient, and successful instructor of the deaf and dumb; and believing that his labors, character and influence have contributed largely to build up and sustain the efficiency and reputation of this as an educational Institution, we sincerely regret his loss from the corps of teachers; and we also extend to his family our sympathy in their sorrow.

EDUCATIONAL.

Uniform good order and the observance of the regulations of the Institution by the pupils, with few exceptions, and these easily corrected and disposed of, have contributed large

ly to make the school year a pleasant one, resulting in the moral, intellectual and physical growth and development of the children. Diligence in studies by the pupils, directed and stimulated by the faithful and earnest labors of the teachers, has produced results quite as favorable and satisfactory as in preceding years. While some have made progress very slowly, requiring great patience and labor to arouse the dormant intellect sufficiently to carry them forward even a short distance in the line of their education, others have advanced rapidly, and between these extremes, fair progress has been made by all.

In the formation of classes in the several grades, I have endeavored to assign to the same class, as nearly as I could, pupils of like capacities and capabilities—those who make the most rapid progress in one class, and those who advance more slowly in another—believing that by this means the greatest good may be accomplished for all. This mode of classification can only be carried out to that degree of exactness which is desirable when the number of classes can be increased and the number of pupils in the classes diminished; and this will require additional buildings and an increased corps of teachers.

During the last term of school there were fifty-two pupils in the articulation department. These were divided into five classes, each class receiving one hour's instruction daily in articulation and lip-reading. Seven of these were born deaf; fifteen lost their hearing before they had passed the age of two years; fourteen became deaf between two and five years of age, and six between five and eight years of age; the age at which the other ten became deaf is not given in the applications for their admission to the Institution. Some of these pupils have been under instruction three terms, some two, and the others one term.

At the closing examination of the last term of school, the class which had been under instruction only the one term was required to draw a diagram of the vocal organs, read elementary sounds from the board, write the symbols for sounds given, to write the English consonant chart and the English vowel chart, and to read simple sentences, written in symbols, from the board; to the other classes, each, were dictated ten simple sentences of three to twenty-two words, which they were re-

quired to read from the lips and to write upon their slates. The same accuracy was required in this examination as in the examination upon their other studies, and upon a standard of 100 as perfect, the results may be classified as follows:

Three stood 100; twenty-six, from 90 to 99; thirteen between 60 to 90; and five between 60 and 20; one failed, and four were not examined, by reason of absence on account of sickness.

The foregoing statement is not intended to convey the impression that the oral language of these pupils is perfect, or nearly so, but the facts warrant the conclusion that something can be accomplished by instruction in visible speech to enable the deaf and dumb to acquire and use articulate language, the ever-ready means of communication in accomplishing the business, the duties and the intercourse of daily life.

The extent to which this may be successfully effected, is a mooted question between the ablest and most zealous educators in this country and in Europe. In many of the schools in Europe and in a few in this country, the oral method of instructing the deaf and dumb is used exclusively, and in many others in this country the oral and the sign systems are combined, thus showing that the trend of sentiment is in favor of oral instruction as far as it can be successfully used, and should it become apparent that as good results, to as great a number, can be obtained by the oral as by the sign system of instruction, the former will doubtless supercede the latter, as it will place the educated mute, who can, in some degree, use oral language and can read and understand it from the lips of others, upon more nearly equal grounds with the speaking and hearing, and thus enable him the better to act his part in life than he could otherwise do.

In the industrial department the boys and girls have shown a commendable disposition to do their duty punctually and cheerfully. The cabinet shop and the chair shop have been operated to their full capacity, and there has been sufficient work to keep the boys assigned to them regularly employed during the labor hours each day. The shoe shop depends almost entirely upon the work furnished it by the Institution; and this is not sufficient to keep as large a number of boys regularly employed as should be assigned to it; and this de-

mands a change in this department, either to enlarge the cabinet shop to accommodate a greater number of boys, or else to establish some other branch of business in which a part of the boys could be advantageously employed. I deem it of the greatest importance that every boy of proper age, and sufficient ability, should be regularly engaged in some line of daily employment, so as to educate him into correct and industrious habits, and to qualify him to pursue some vocation by which he may be able to make a competent and an honorable living after he leaves the Institution.

IMPROVEMENTS AND REPAIRS.

The improvements and repairs made during the year consist of three flights of new stairs in the school building; all the doors of the school rooms, dining rooms, dormitories, and halls were changed to open outward in order to afford free and ready egress for the occupants in case of fire occurring in the buildings; new floors were laid in three school rooms; seventy new desks were placed in the school rooms, and thirty old ones worked over, painted and varnished; new tables were placed in the larger boys' evening study room; all the inside wood work in the buildings was painted, and the grained painting, the wood work in the pupils' dining room and in the private parlor, also the inside shutters, were varnished; new carpets were laid in four private rooms, and two rooms were repapered. A new fifty-barrel iron tank, to increase the water supply, was placed in the fifth story of the front building; also, a new stand-pipe, with hose connections on the principal floors, was erected in the same building; the overflow pipe from the tanks was extended by a three-inch pipe to the reservoir; fourteen hundred feet of service pipe, and four additional hydrants for irrigation, were placed in the grounds. A new steam supply pump was placed in the engine house.

The roofs of the buildings, the steam heating apparatus, and gas fixtures were all repaired during the vacation, and about the ordinary amount of necessary minor repairs were made during the year, but which need not be enumerated here.

IMPROVEMENTS NEEDED.

Two of the steam boilers in the engine house are old and well worn, and can not be used with safety longer than the ensuing winter, and they should be replaced by new ones at as early a time as practicable. The cost of two boilers, of the best material, construction, and of sufficient capacity, set up in position, is estimated to be from \$2,075 to \$2,450; and if to this be added the cost of materials and masonry necessary to rebuild the furnace, it would require an appropriation to be made by the Legislature of not less than \$2,500, to provide for this expenditure.

A new floor should be laid in the lower hall of the school building; some of the school rooms and dormitories will need reflooring; old and worn-out fences upon the farm should be replaced with new ones, and such parts of the farm as need it should be under-drained; outside shutters should be placed upon the windows in the cabinet shop; the shop buildings should be painted, also the greenhouse and the fence around the front enclosure. These, together with other necessary improvements and repairs that may be required to be made during the ensuing year, will exhaust the amount of the appropriation made for the year's current repairs and improvements.

REAL AND PERSONAL PROPERTY.

The value of the real and personal property belonging to the Institution, or to the State, and used in and about the same, on the 31st day of October, 1882, was \$490,838.09.

The accompanying inventory, to which you are respectfully referred for more definite information, gives a classified statement of the different kinds of property, how, and for what purposes used, and the specific value thereof.

THE FARM AND GARDEN.

The value of the products of the farm and garden, for the year, estimated at the current market price of like articles at the time when used, and of those unused, on the 31st of October, 1882, amounted to \$2,709.74.

The value of products used during the year, \$1,877.74.

The value of products remaining unused, October 31, \$832.

A classified statement, giving the kinds, quantities, and value of the products of the farm and garden for the year ending October 31, will be found in a subsequent part of this report.

VALUE OF CLOTHING.

The value of clothing furnished to pupils, the accounts for which were filed with the Treasurer of State, during the year ending October 31, amounted to \$741.82, and the earnings of the Institution, paid into the general fund of the State, for the same period of time, amounted to \$30.18.

Detailed and itemized statements of the same are herewith submitted.

FINANCE.

The financial transactions of the year are so fully and minutely set forth in the accompanying classified and itemized statements, prepared by the Steward, from the books of the Institution and the vouchers on file, that I deem it necessary to give only a brief summary in this part of my report.

Current Expenses.

Appropriation for the year ending Oct.

31, 1882	\$55,000 00
Current expenses during the year.....	52,818 67

Balance unexpended Oct. 31, 1882..	<u>\$2,181 33</u>
------------------------------------	-------------------

From the current expenses.....	\$52,818 67
--------------------------------	-------------

Deduct for clothing furnished to pupils, and earnings of the Institution dur- ing the year.....	<u>772 00</u>
---	---------------

Makes the net current expense for the year ending Oct. 31.....	<u>\$52,046 67</u>
---	--------------------

Calculated upon the basis of 333 pupils, the number that received instruction in the Institution within the year, the net per capita expense was.....	<u>\$156 30</u>
---	-----------------

Repair Fund.

Appropriation for repairs of building
and premises for the year ending Oct.

31, 1882	\$3,000 00
Expended during the year	2,982 37

Balance unexpended Oct. 31, 1882..	<u>\$17 63</u>
------------------------------------	----------------

The following table shows, by counties, the number of pupils admitted, dismissed, and the number remaining entitled to the privileges of the Institution, for the year ending October 31, 1882.

From this table it will be seen that pupils have been received into the Institution during the past year from eighty-four counties in the State, showing a very general and uniform distribution of the advantages of the Institution to all parts of the State.

The following eight counties have been without representation in the Institution during the year, to-wit: Brown, Crawford, Delaware, Jasper, Perry, Posey, Spencer, and Switzerland.

RECAPITULATION.

Number admitted during the year..... 383
 Number dismissed..... 41

Number remaining..... 342

The following statement shows the number of pupils dismissed from the Institution, and the reasons therefor, during the year ending October 31, 1882:

Graduated from the Academic Department..... 7
 Graduated from the Primary Department..... 10
 Dismissed from grade on Certificates of Standing..... 10
 Went home without permission and not returned..... 1
 Leaving the State..... 3
 Taken home on account of health and other causes, and
 not returned..... 5
 Incapacity to receive an education..... 2
 Misconduct..... 1
 Died during the Term..... 2
 Total..... 41

RULES AND REGULATIONS
FOR THE
ADMISSION OF PUPILS.

I. The Institution is open to all the deaf and dumb of the State, of suitable age and capacity for receiving instruction, free of charge. For the present, and until additional accommodations shall be provided, boys can be admitted only between the ages of twelve and twenty-one; and girls between the ages of ten and nineteen.

II. Pupils will be admitted on the following conditions: 1. The pupil, well provided with clothes, is to be brought to the Institution punctually at the commencement of each session, unless detained at home by his or her sickness. 2. The pupil is to remain in the school until the last Wednesday in June in each year. 3. No parent or guardian shall be allowed to take a pupil out of the school in session time without assigning satisfactory reasons.

III. The annual sessions of the school commence on the first Wednesday after the 15th day of September and close on the last Wednesday of June. *Every pupil is to come promptly on or before the first day of the session, and is to remain until the last day of the same. The only exceptions allowed are cases of sickness.*

IV. The Institution will provide for each State pupil, regularly admitted, boarding, lodging, washing, superintendence of conduct, manners and morals, medical attendance, instruction,

school books, slates, and all other incidental expenses of the school room, without charge, but will not pay the traveling expenses of pupils in coming to or returning from the Institution, nor supply them with clothing.

V. Those who are unable to pay for the necessary clothing, or whose parents neglect to supply them, it is made the duty of the Superintendent to furnish in accordance with the following legislative enactment: "That when the pupils of the Institution for the Deaf and Dumb are not otherwise supplied with clothing, they shall be furnished by the Superintendent, who shall make out an account therefor, in each case, against the respective counties from which said pupils were sent, in an amount not exceeding forty dollars per annum for every such pupil, which account will be signed by the Superintendent, and attested by the seal of the Institution for the Deaf and Dumb, and the Treasurer of State shall charge the account, thus certified to the county from which the pupil was sent, and collect the amount due from such county at each settlement with the Treasurer thereof, and such moneys shall be covered into the general fund of the State Treasury." [Act March 6, 1879.]

"Sec. 3. When such account shall be received by the Treasurer of the proper county (to whom it shall be immediately sent upon its reception by the Treasurer of State from the Superintendent), such County Treasurer shall cause the same to be paid out of the county treasury to the Treasurer of the State; and such County Treasurer shall collect the amount of such account from the estate of such pupil, if he have any, by suit, if necessary, in the name of the county."

VI. Each applicant for admission should come well supplied with clothing, and on all articles on which it is possible to mark the name of the pupil, it should be written with indelible ink. In all cases, except those clothed by the county, besides the ordinary supply of clothing, the applicant should deposit with the Superintendent a sum not less than five dollars, to defray incidental expenses, repairs of shoes, etc., any part of which remaining unexpended at the close of the session will be returned. Each pupil should be supplied with a trunk.

VII. The Institution is not an asylum, but a school of learning; hence no one can be admitted or retained as a pupil who,

from sickness or from other cause, is unable to pursue his or her studies successfully.

VIII. The course of study in the Primary Department embraces spelling, reading, writing, arithmetic, geography and grammar, and ordinarily requires seven years to complete it. All the pupils who wish it, and who will avail themselves of it, are allowed the full benefit of this course of study.

IX. For the benefit of those who wish to qualify themselves for teaching, or for other intellectual pursuits, the Trustees have established a High Class, and adopted a course of three years' study in the sciences. From among those who complete the Primary course of study the Superintendent may select each year the most promising pupils and admit them as members of this class.

X. It is the intention of the Trustees to render the pupils self-supporting, so far as practicable, and that every pupil, on leaving the Institution, shall be proficient in some useful occupation or trade, so as to be able to procure a livelihood without reliance on the charities of others. In accordance with this design, all the scholars will be required to labor a portion of each day—the girls performing the lighter kinds of housework and various kinds of needlework, as plain sewing, or ornamental work, and dressmaking; and the boys at various trades, the necessary work about the Institution, and in the cultivation of the farm and garden.

XI. All business letters or letters of inquiry in regard to pupils in the Institution, or those whom it may be designed to place there, should be addressed to WM. GLENN, *Superintendent Institution for the Deaf and Dumb, Indianapolis, Indiana.*

XII. Those persons bringing pupils to, or taking them away, can not be furnished with board and lodging at the Institution.

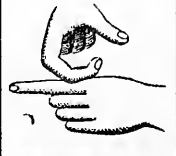

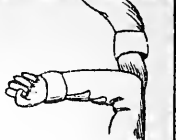

XIII. No pupil, unless under extraordinary circumstances, can be received at any other time than at the commencement of the session.

XIV. The pupils will be sent home to spend the vacation, which extends from the last Wednesday in June to the first Wednesday after the 15th of September.

To the Board of Management:

GENTLEMEN—I submit the foregoing as an itemized inventory and statement of all the property, real and personal, belonging to the Institution and connected therewith on October 31, 1882.

WM. GLENN,
Superintendent.

STATE OF INDIANA, } ss:
COUNTY OF MARION, }

Personally appeared before me, a Notary Public in and for the County of Marion, State of Indiana, William Glenn, Superintendent of the Indiana Institution for the Education of the Deaf and Dumb, and, being duly sworn upon his oath, says that the foregoing is a complete itemized inventory and statement of all the property, both real and personal, belonging to the said Institution or belonging to the State of Indiana and connected therewith, or in use in and about the same, on the 31st day of October, A. D. 1882.

Subscribed and sworn to before me this 6th day of November, A. D. 1882.

C. B. HOWLAND,
Notary Public.

All the foregoing I submit as my annual report for the year ending October 31, 1882.

WM. GLENN,
Superintendent.

INDIANA INSTITUTION

FOR THE

Education of the Blind.

THIRTY-SIXTH ANNUAL REPORT

OF THE

TRUSTEES AND SUPERINTENDENT,

FOR THE

REPORT OF TRUSTEES.

To *His Excellency*, ALBERT G. PORTER,

Governor of Indiana:

The trustees in submitting this, the thirty-sixth annual report of the Institution for the Education of the Blind, will confine themselves to such matter as may be required by law, with the exception of calling the attention of your Honor to the various suggestions embraced in the Superintendent's report in regard to the further provision for the education of the blind.

We desire the special attention of your excellency and the Legislature to the urgent necessity for additional buildings for the accommodation and education of the blind children of the State. Room should be made for at least one hundred new pupils. As citizens of Indiana we are proud of her educational standing. As trustees for the Institution for the Education of the Blind, we earnestly ask that there shall be no discrimination against the blind, but that there be a just and adequate provision made for their education. Such a one as shall extend the boon of education to all the sightless children of Indiana.

APPROPRIATIONS.

The appropriation of \$27,000, for current support, and \$2,000 for repairs, as made by the last Legislature for the years 1882, and 1883, was based upon the low prices of articles entering into the support of the Institution, at the time of making the estimates. The unexpected advance in the prices of the leading articles of produce, during the past year, compelled the most rigid economy in order to meet the unavoidable expenses of the Institution.

It is the opinion of the Trustees, that, unless there should be another advance in the markets, that an appropriation of \$30,000 for current support and repairs, will be sufficient for each of the years 1884 and 1885.

For a detailed account of the work of the Institution in its various departments, we submit for your consideration the report of the Superintendent.

The report sets forth very clearly and fully the objects of the Institution, and the results attained.

Officers and teachers have discharged their duties with fidelity; the progress of the pupils under their charge, attest the success of their labors. We commend their work, and invite your personal examination.

Respectfully submitted,

JOHN FISHBACK, Pres.

DANIEL MOWRER, Sec.

W. V. WILES, Treas.,

Trustees.

SUPERINTENDENT'S REPORT.

Gentlemen of the Board of Trustees:

The Institute for the Blind is a school for the education of the blind youth of the State. It is a free school for the blind, giving opportunity and facility for mental, moral and physical development. Its aim is to accomplish for the blind, what our grand system of common school education does for the seeing.

The legal age for admission is from nine to twenty-one. The majority of the pupils come to the Institute without any previous instruction. Many are almost helpless, neither able to feed or dress themselves. A process of education is at once begun depending on the individual need of each pupil.

Literary instruction is given to all the pupils in the branches which are taught in the common schools. Those who are capable of advancing beyond the common branches are given an additional three years' course. Musical instruction is a prominent feature of the work, special attention and time being given to those who develop marked musical talent.

All are taught handicraft; the girls and small boys, in the girls' department, and the larger boys in the broom shop. The object in this department of the school is to fit the pupils to be useful and valuable members of society, by qualifying them to do their share in the world's work. In this the Institution has been eminently successful, making many of them self-sustaining and independent, and others useful members of their respective families.

In the early stages of the pupil's progress he requires constant care and individual instruction. Habits of attention, of industry, of thought, of obedience, of cleanliness, of good man-

ners, are to be formed. Bad habits, many of these the results of mistaken parental fondness, are to be eradicated. Moral ideas are to be inculcated. Only those in actual contact with the work can understand and appreciate the difficulties which are encountered and successfully overcome in the education of the blind.

Under our laws, all blind persons of proper age and of sound mind, also those whose sight is so defective as to prevent them from receiving an education in the common schools are entitled to the benefits of the Institute, free of charge. The State provides everything necessary to the comfort and health of the children while in school. The parents or guardians furnish clothing and railroad fare. •

The whole scope of the work of the Institute is educational; hence it is not an asylum for the idiot and the imbecile; it is not a home for the aged and infirm blind; it is not a hospital where either the rich or the poor have their eyes treated.

TERM'S WORK.

School opened on the 7th of September, 1881, and closed on the 13th of June. Enrollment, 128. New pupils enrolled during the year, 19.

Substantial and satisfactory progress has been made in the different departments. The teachers have labored faithfully and patiently and the progress of the pupils has been commendable.

Literary Department

The school consists of five grades which have been taught as follows:

Fifth Division. Reading, Spelling, Object Lessons, Number Work, Memorizing.

Fourth Division. Reading, Spelling, Object Lessons, Number work, Memorizing.

Third Division. Reading, Spelling, Geography, Mental Arithmetic, Memorizing.

Second Division. English Literature, Writing, Physiology, Grammar, Arithmetic, Memorizing.

First Division. Geometry, Rhetoric, Chemistry, Mental Philosophy.

Musical Department.

In this department instruction is given on the pipe organ, piano forte, in voice culture, in piano tuning; also, to two chorus classes, to a Cornet Band, and to a class in the New York Point Musical Notation.

Handicraft—Girls' Department.

Instruction is given in bead work, sewing by hand and on machine, knitting by hand, and on machine, crocheting, and in cutting and fitting garments.

Handicraft—Boys' Department.

Instruction is given in broom making.

Physical Training.

Daily exercises in Calisthenics.

The following exhibit shows the articles made during the year, in the Girls' Department.

BROOM SHOP.

Thirty-four boys received instructions in broom making; five completed the trade; four were assisted in procuring broom tools from the fund provided for indigent pupils.

It is the practice in this Institution, as it is in almost all the schools for the blind in the United States, to give a portion of the time each day to the industrial work, so that the pupil may complete his trade at the same time that he finishes his literary course. Eight terms of school will give the pupil one years' work in the shop. From five to six years is the average length of time which pupils remain in the Institution, after they are old enough to enter the shop. Eight or nine months is not a very long time for a blind boy to acquire a trade, and especially is this the case when it is spread out through five or six years.

HEALTH.

The general health of the pupils has been excellent throughout the term, only one severe case occurred, and this proved fatal. John Lyons died in March from an attack of typhoid malarial fever.

John was a bright boy, a general favorite among the pupils, and a promising pupil. His cheerful countenance, pleasing ways, love for his teachers, and respect for religion, are to all of us pleasant memories.

The attending physician, Dr. C. E. Wright, has been unremitting in his care and attention to the pupils during illness.

PRESENT TERM.

School opened on the 6th of September. Enrollment at this time, 117; 115 in attendance. Health is good. All the departments are in good condition. The work in the shop is specially

worthy of note. A desire for improvement, a desire to secure the best result from the work, is more marked than in some of the previous classes.

IMPROVEMENTS AND REPAIRS.

A brick oven was built, and a room fitted up for a bakery. All the fences on the Institute premises were repainted, also stable and engine house. All the window shutters of the main building were varnished. The pupil's dining room, boy's wash room, and the basement halls, were painted, sixteen rooms papered, one of the large tanks relined with lead, also a new soil pipe put in from the water closets to the sewer on the west side.

WANT OF ROOM.

The Institution Building was erected in 1850. It was ample and commodious for the Blind at the time. Before 1869, it had become crowded. I quote report of 1869. "When the plans of our present building were devised, and their construction commenced, some twenty years ago, the capacity of this main edifice for the accommodation of the school and boarding departments, was deemed sufficient for one hundred pupils, together with the necessary officers and employes. This was considered the maximum number, while that which could be suitably accommodated, was placed at eighty. Though it was manifest at the time that the prospective increase in the population of the State would ultimately render a larger building necessary, it was thought advisable not to burden the people with a greater outlay of means, until the necessity should arise, and in accordance with this view, the building was so designed as to admit of a suitable extension. From fifteen to twenty years was the time which it was presumed the school would take to out-grow its present accommodations.

"This period is now past, and the presumption fully justified by experience. In short, we are full and overflowing. So much so, that after crowding our dormitories beyond their proper and healthful capacity, we are obliged to lodge a number of the pupils in the halls of the upper stories of the building. Beside our school rooms are too limited in number for proper classification, and too limited in capacity for healthful ventilation and convenience in the work of instruction, while the pupils are

without adequate indoor range for exercise and recreation during inclement weather. All this, too, with our present number of about one hundred, while numerous others are applying for admission into the Institution whom we can not accommodate.

“Still another very important desideratum of which our building has always been deficient, its necessity being unappreciated in the beginning, is an ample gymnasium for each sex of pupils. But as I have in former reports endeavored to show you that a school for the blind, above all others, requires the aid of gymnastic training for the proper, healthful development of the physical powers of its pupils, the subject need not be enlarged upon here. We attempt to carry out this useful feature of physical education, despite our cramped accommodations, but find the obstacles to success almost insurmountable.”

Each annual report from that time has called attention to the incapacity of the building to accommodate the blind of the State. No class stand in greater need of an education.

No class receive more benefit from an education. On the score of economy it is far cheaper to provide for them for eight or ten years in an institution of learning, and make them self-supporting, than it is to feed and clothe them as paupers in some poor house two or three score years.

Under existing circumstance over one-half of the blind of Indiana are growing up in ignorance. Education is free to all the seeing children of the State, why should it be denied to half of the blind. The fundamental law of the State says, “It *shall* be the duty of the General Assembly to provide for the education of the blind.” Law, justice, and humanity, all demand that an adequate provision shall be made for their education.

The inventory and statements required by law will be found under their appropriate headings.

I hereby affirm that to the best of my knowledge and belief the inventory and statements are correct.

W. B. WILSON,

Superintendent.

Affirmed and subscribed to before me, a Notary Public in and for the county of Marion, State of Indiana.

Witness my hand and seal this 24th day of November, 1882.

INDIANA INSTITUTE

FOR THE

EDUCATION OF THE BLIND.

This Institution is located at Indianapolis, the capital of the State, occupying a healthful and beautiful site in the northern part of the city.

It is strictly an educational establishment, having for its object the moral, intellectual and physical training of the young blind of both sexes, residing in the State, and is, therefore, neither an asylum for the *aged and helpless*, nor a hospital for the treatment of disease.

For the information of applicants and other interested parties, the following compilation is made from the regulations of the Institute, viz:

1. The school year commences in September and continues in session forty weeks.
2. As a rule, applicants who are under nine, or over twenty-one years of age, are not admitted; but exceptions are sometimes made in favor of those who are over age, at the discretion of the Board of Trustees.
3. No person of imbecile or unsound mind or of confirmed immoral character, will be knowingly received into the Institute; and in case any pupil shall, after a fair trial, prove incompetent for useful instruction, or disobedient to the regulations of the Institute, such pupil will be thereupon discharged.
4. No charge is made for the boarding and instruction of pupils from the State of Indiana.

5. All are required to come provided with an adequate supply of good, comfortable clothing, embracing suitable articles for both summer and winter wear, in such quantity as to admit of the necessary change for washing and repairing.

6. Each article of clothing should be distinctly marked with the owner's name, in order to prevent confusion or loss, and must be sent in good order and condition, not only upon the first entrance of the pupil, but also at each subsequent return from home after the vacation.

7. It is positively required that every pupil shall be removed from the Institution during the annual vacation of the school, as well as at any other time when such removal may be deemed necessary by the proper officers thereof; and in case of the failure of the friends of any pupil to comply with this requisition, provision is made by law for the sending of such pupil to the Trustee of the township in which he or she resides, to be by him provided for at the expense of the county.

8. Persons bringing pupils to the Institution, or visiting them while there, can not be accommodated with boarding and lodging during their stay in the city.

9. All letters to the pupils should be addressed to the care of the Institute, in order to insure their prompt delivery.

10. Parties desiring the admission of a pupil are required to fill up the subjoined form of application and forward the same to the Superintendent of the Institute, giving truthful answers to the interrogatories therein contained, and procuring the signature of a Justice of the Peace to the certificate thereunto attached; and the pupil must in no case be sent until such application shall have been received and favorably responded to by the Superintendent.

Signed,

W. B. WILSON,

Superintendent.

APPLICATION.

*To the Superintendent of the Indiana Institute
for the Education of the Blind:*

The undersigned, desiring to procure the admission of a pupil for education in the Institution under your charge, would submit for your consideration the following particulars, in answer to the several interrogatories herein propounded, and will stand pledged for the correctness of the same, as well as for the proper fulfillment of the requirements set forth in the circular prefixed hereto:

1. What is the *real* and full name of the applicant?

Answer

2. In what State or country was he or she born?

Answer

3. What is the date of his or her birth?

Answer

4. At what age did the blindness occur?

Answer

5. What is the supposed cause of blindness?

Answer

6. If the blindness is not total, is it sufficient to prevent the acquirement of an education in a school for the seeing?

Answer

7. Is the applicant of sound mind, and susceptible of intellectual culture?

Answer

8. Has he or she any bodily deformity or infirmity, and if so, what?

Answer

9. What is his or her general state of health?

Answer

10. Is he or she free from epilepsy and all infectious disease?

Answer

11. Has the applicant ever been a pupil in any other school for the blind, and if so, what one and how long?

Answer

12. Is he or she free from all immoral habits?

Answer

13. What are the full names of the *own* parents of the applicant?

Answer

14. Were such parents related before marriage, and if so, how?

Answer

15. Are there other cases of blindness in the family, and if so, how are they related to the applicant?

Answer

16. If the father of the applicant is not living, or has, for any reason, ceased to provide for the same, who is his or her present guardian?

Answer

17. What is the postoffice address of the father or guardian, as the case may be, of the applicant?

18. What are the names of the township, county and State, in which the applicant has legal residence.

Answer

19. If in the State of Indiana, what is the name of the present Trustee of such township?

Answer

Signed this day of , A. D. 18 . .

.

STATE OF INDIANA, }
 COUNTY. } ss:

I, the undersigned Justice of the Peace in and for said county, hereby certify that the above named applicant for admission as a pupil of the Indiana Institute for the Education of the Blind, is a legal resident of the township and county herein set forth as the residence of said applicant.

Witness my hand, this day of , A. D. 18 . .

FOURTH ANNUAL REPORT

OF THE

BOARD OF TRUSTEES

OF THE

Asylum for Feeble-Minded Children

AND

SOLDIERS' ORPHANS' HOME,

FOR THE

FISCAL YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received November 18, 1882, examined by the Governor, referred to the Auditor of State for verification of the financial statements, and delivered to the Secretary of State to be filed and preserved in his office, and published as may be directed by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, November 21, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, do hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in my office November 21, 1882.

E. R. HAWN,
Secretary of State.

TRUSTEES' REPORT.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

Since the submission of our last annual report, Colonel John P. Early, a member of, and President of the Board of Trustees, has severed his connection with the Institution by resignation and taken up his residence temporarily in California. We regret exceedingly the necessity which takes Mr. Early from us, for he was a most valuable adjunct in the management of the affairs of these Institutions. For about seven months the two remaining Trustees have managed the affairs of the Institution pertaining to their duties, to the best of their judgment and ability. And now, in presenting this, their fourth annual report, they would state that in the Asylum Department, since the last report, the number of pupils has been increased from 82 to 95, the latter including a number yet remaining at their homes from the summer vacation. They will return. We have a number of applications acted upon, filed and marked "approved," but the pupils are not yet received for want of room, and this for the want of sufficient appropriation. Wherefore, in this connection, we earnestly recommend an appropriation of \$25,000 for an enlargement of the Asylum to meet the pressing needs of the State.

In this department we have a number of cases, upon whom, after a thorough and fair trial, we have failed to make such marked improvement, as would warrant their further continuance in the Institution, as "improvable." Under the law, and our rules, we have made ineffectual effort to return all such to their homes; ineffectual, because, in most cases, their friends

show decided unwillingness to receive them, and the result is they still remain, requiring an extra attendant to take care of them. Of this class (idiotic), there are very many throughout the State, whose necessities are practically ignored, for whom public provision should be made. Especially should the females of this class be provided for, that they may be protected against the wiles of the unprincipled. Therefore, we would again urge the necessity of a Custodial Department for these unfortunates, and suggest that a separate building should be erected, near enough to the present Asylum to be under the supervision of the Superintendent, and so remote as to keep the inmates of the two separate from each other.

THE HOME DEPARTMENT.

At the last report there were 132 of the orphans. At this time we report 174, including absentees not yet returned from the summer vacation. As to the inharmony, once complained of, on account of the contact of the inmates of the two institutions, we are happy to state that none exists at this time.

MORE LAND.

At present the Institution owns about fifty acres of land, which has always proved entirely inadequate to its wants. Hence, for three years, we have been renting for both pasturage and cultivation. This year we have under rent something over one hundred acres; seventy for pasture, the remainder for cultivation. The difficulties encountered in procuring land, and the high rent required, force the conclusion that it is bad economy to depend on renting. Therefore, we would suggest, that an appropriation of seven or eight thousand dollars, for the purchase of adjacent lands, which can now be had, is earnestly demanded by the necessities of the Institution.

Many of the larger boys of both departments have been utilized as workers on the farm, who, under the judicious management of James Daugherty, our excellent farmer, have not only rendered the State good service, but have acquired for themselves habits of industry and a knowledge of the art of farming which will doubtless prove of benefit to them in after life.

The boilers are removed from under the building, where the present management found them, to the new boiler house, sixty feet distant from the main building, so that dangers apprehended from that source no longer menace or excite the fears of the Board or inmates.

THE SCHOOLS.

Miss Clark still continues the efficient Principal of her department—the “Feeble Minded”—assisted by her able corps of teachers, Mrs. S. J. Lewis and Miss M. T. Wilson.

In this school very satisfactory progress has been made. Attention is called to the report of the Principal in this department.

THE ORPHANS.

Miss Boufoy, former Principal of this school, having, in August last, accepted a call to take charge of an orphanage, an institution of Decatur County, in this State, resigned her position here. She was succeeded by Miss Susan Ray Wilson, of Shelby County, as Principal, under whose efficient management, assisted by Miss Dever and Miss White, both accomplished teachers, the school has prospered and the pupils have made excellent advancement. We flatter ourselves that these schools will compare favorably with others of like character elsewhere.

The Principal's report is herewith submitted, and attention is also invited to it.

ADMISSION OF INMATES.

In our last annual report we referred to the fact of numerous applications for the admission of orphans, citizens of Indiana, whose fathers were citizens of Indiana, but enlisted in regiments of other States, and others, orphans of Indiana soldiers, who removed to other States and there died. These would seem to us meritorious cases, which strongly enlist our sympathies, but the law and decisions of the Attorney General are against their admission. There are other cases which address themselves to the sympathies of the Board, in which the fathers are still living, but are unworthy to have the care of children or have deserted them, and the mothers are dead, or, what is

worse, are living abandoned and dissolute lives. Under the law as it now stands, these wandering, innocent waifs must be rejected. On the other hand, we not infrequently have applications where the Board is satisfied that the admission is sought on account of the unwillingness of the mother to care for and support her children and from a desire to be free from them as an incumbrance. Such persons are generally clamorous and exacting.

We again urge that a law placing admission in the discretion of the Board, subject to the supervision of the Governor, would be much wiser and certainly more humane.

AS TO THE ASYLUM.

We again state that our capacity and accommodations in this department are nearly fully occupied, and from now on admissions can only be granted as vacancies occur. The utmost of our present capacity would not suffice to accommodate over 100 pupils and the necessary attendants.

In this connection, we would state as our best judgment and belief, that had the last legislature made the necessary appropriation for the enlargement of the Asylum, and for the support of the increasing numbers of inmates, to-day there would have been one hundred more pupils under tuition in this department than we now have; and to that increased extent, this unfortunate class of children of the State, would have been provided for, and made comparatively happy.

Correct statistics show the existence of 1,500 of this class of children within our borders. And we feel it our bounden duty again to urge in strongest terms, the great necessity of providing for this unfortunate class of our population.

WATER SUPPLY.

Our cistern capacity is entirely inadequate to the necessary supply of water for steam purposes. The hard mineral water from the springs is destructive to boilers and piping. As a matter of economy alone, the present cistern capacity should be at least double what it is. It was the intention of the present management, to supply this, and other equally important deficiencies, and it would have been done, had not the Legislature

withheld the means necessary for its accomplishment. The steam apparatus of this establishment cost over \$12,000, and every day's use of the mineral water is more or less destructive to the boilers, flues and piping.

KITCHEN AND STORE ROOM.

A substantial brick structure, one story, 25x50 feet, attached to the north wing of the building for kitchen and store room—the latter, in which to keep securely supplies of groceries, provisions and dry goods, is again urged as an absolute necessity.

FIRE AND APPARATUS.

We feel it our duty to urge the great importance of providing proper apparatus for the extinguishment of fire. This would have been provided had the means been furnished the management to do so.

This is a growing Institution, unexcelled in importance by any of the noble charities of our State, is located on a site unsurpassed in beauty, and, for healthfulness, stands without rival.

Of the men who conceived the idea and executed the plan of a Feeble-Minded School and Asylum in Indiana, we would say they are worthy of all honor. Their names will go down to posterity in praise and grateful remembrance.

As yet the Institution is in its infancy; but, young as it is, it has already gladdened the hearts of many a household in Indiana, and, as its existence becomes more generally known, other hundreds will receive its benefits, and other households, as time wears on, will sing its praise and bless the memories of its founders.

The pay of the Trustees of these combined institutions—\$200 per annum each—is meager and insufficient, except, perchance, they should all be selected from the immediate neighborhood of Knightstown. This, however, will hardly ever be done, inasmuch as the whole State owns and keeps up the establishment, and the remotest points are as much entitled to its benefits as those in nearer proximity to it. Then, we should say, \$500 per annum for each would be a fair salary for the Trustees—this to cover expenses—thus placing them on an equality with the other benevolent boards of the State.

We desire, in closing our Report, to express our high appreciation of the services of the Superintendent, and his worthy lady, our storekeeper. She has held a most laborious position, and has performed its duties well, and faithfully.

Of Mrs. S. D. Hamilton, matron of the combined institutions, we can hardly say too much in praise. With the great amount of responsibility resting upon her, she has performed all her varied and onerous duties well at all times.

And of all the officers, teachers, and helps, we desire to say that each and all have performed their duties acceptably.

We recommend the following appropriations for the following purposes—namely:

BUILDINGS, SUPPORT, ETC.

For Custodial Department, Hospital Building, Building for Kitchen and Store-room, and an additional one hundred foot wing to the main Asylum Building, and Coal House.....	\$36,000
Support for Home, per annum.....	30,000
Support for Asylum, per annum.....	20,000
To purchase Land	8,000
Current repairs, per annum.....	2,500
Superintendent and Trustees' Fund, per annum.....	3,000

REPORTS.

For detailed statements of expenditures and finances, reference is had to the reports of the Superintendent and Treasurer; for stores and supplies, to that of the Storekeeper. The Matron reports as to household affairs, etc. The Physician's report is also referred to, showing the sanitary and health condition of the inmates. For the progress of the schools of each department, reference is had to the full and very satisfactory reports of the principal teachers of each of said departments.

OLD ASYLUM CLAIMS.

There are a few claims, aggregating not to exceed \$800, according to our recollection, urged against the State, coming to worthy men—farmers, mechanics and laborers about Knightstown—for material furnished and labor done for the

contractor in the erection of the new wing to the Feeble-Minded Department. While this labor and material were furnished to the contractor and not to the State, yet it all went into the building and the State received the benefits. While there is no legal obligation resting against the State to pay these claims, we suggest whether or not the State could better afford to pay these than that these men should be forced to lose their hard earnings. We would recommend their payment.

Trustees.

SUPERINTENDENT'S REPORT.

To Board of Trustees of the Asylum and Home:

GENTLEMEN:—In presenting this, my second annual report of these combined Institutions, I feel it our first duty to express our gratitude to Almighty God for the good health that has attended us in our labors throughout the past year.

Death has but once visited either department, and we have had but few serious cases of sickness, but one epidemic and very few accidents, when we take into consideration the number of children cared for in these two Institutions.

This Home and Asylum is situated in a beautiful grove; on a nice elevation, affording every facility for a thorough and complete system of sewerage from the building. On the grounds is located a once noted spring, affording an abundance of water and celebrated for its medicinal qualities, and as being at one time a popular summer resort for many of the older citizens of Indiana. The waters combine tonic, alterative and diuretic properties, which have proven quite beneficial to many children coming here, some of whom inherit constitutional taints. For health, quiet and pleasant surroundings, it could scarcely be surpassed in the State. Nature has done a great deal toward rendering the grounds beautiful, but the expenditure of a small sum of money under the direction of a landscape gardener would make this a spot of which Indiana might well feel proud.

ASYLUM.

The following has been the movement of population since the opening in November, 1879:

Whole number pupils admitted.....	105
Discharged and taken by friends.....	23
Number remaining and in Asylum October, 1881...	— 82
Number received during year ending October, 1882.....	13
Total.....	<u>95</u>

Disposed of as follows:

Transferred to Orphanage as soldiers' orphans.....	1
Died during year.....	1
Discharged and away temporarily.....	12
	— 14
Notified to come as admitted.....	10
Actually present—	
Boys.....	45
Girls.....	26
	— 81
Total.....	<u>95</u>

These children are divided into companies of twenty-five and thirty, under the charge of an attendant. The girls have a lady and the boys a gentleman, whose duty it is to have the care of them at all times when not in school; to correct their habits of speech and behavior; direct them on the play ground and at work, when they are employed; to attend to them on retiring and on arising in the morning; wait on them at meal-time, teaching them good manners and conduct at table; to be neat, orderly, kind and obliging. The purposes for which the Institution was founded—"to care for, support, train and instruct feeble-minded children"—I have faithfully endeavored to carry out.

Among the hindering causes may be mentioned a lack of means.

The children have been clothed, fed, and, as far as it was possible with the duties required of them, kept in school and under constant supervision of either attendant, teacher or some one in charge of the work they were assisting to do, one teacher remaining at the Institution during the summer vacation in July and August, and exercising a disciplinary care over those pupils remaining in the Asylum.

We had enrolled and under our charge during eight months of the fiscal year, eighty-two children, and only four months have we had the seventy reported as present. This explanation is necessary should a comparison be instituted in the cost of the past with former years.

We had no means with which to increase our facilities for instruction, nothing with which to fit up a gymnasium. Hence, the physical training and education of the children has not been made as prominent a feature as it should have been. Especially is this true as to the last three months.

Physical exercises and training are regarded with the greatest favor in all our older institutions, and in some cases of greater importance than any other one part of their education.

Feeble minds very frequently are the result, among other things, of feeble bodies, and the degree in which you restore the bodily functions and develop muscular activity can you hope to increase mental vigor and improvement.

The disposition in many of these children to imitate motions and bodily movements in others is so frequent it should be utilized as a means of imparting instruction and engaging the attention, and encouragement to follow others is frequently a means more effectual than any other the teacher can employ as a disciplinary or educational method. Hence, the importance of a gymnasium and a gymnast to properly direct in this part of their education. Calisthenic exercises are very efficient for children with well developed and defined bodily movements. The marching drill is another means employed, and both tend to give grace and ease in carriage to many of these children; but there are others who are stiff and awkward, with enervated muscles who need the more active and violent movements required in the gymnasium to develop muscular fibre and give tone and vigor to body and mind; and, as they grow older, industrial pursuits afford this class of children great pleasure and add greatly to their comfort and happiness.

In the Pennsylvania Institute for Feeble Minded and Idiotic children all the laundry work is done by the pupils under the direction of only one paid employe, and as well done and better than in many families.

A large farm is tended by a working force under the direction of a practical farmer and gardener.

Ohio has her farm of three hundred or more acres from which is produced all the vegetables for the large household, beside forage for herds of cattle, horses, sheep and swine—nearly sufficient for the maintenance of all the inmates.

Kentucky has her broom, shoe, and mop manufactories—pursuits satisfactory and highly commended by visitors.

These institutions combine custodial as well as educational features—and their prosperity and popularity with their people attest the wisdom of the plan in their management.

There seems to be some confusion in the minds of people regarding the nature and purpose of this Institution.

The act creating the Asylum seems to indicate, in the second section defining the purpose, a three-fold object—one of custody, support, and education.

We find ourselves *severely* criticised for refusing the application of children for admission upon the ground that they can not be educated and improved in their habits.

In order to be just toward this class of unfortunates, who certainly appeal strongly to our sympathies, we do think increased facilities should be given for the care of some children who, while they can not be educated in books, yet can be taught some of the simpler forms of labor, and rendered capable of doing profitably, to themselves, something to render their condition in life more tolerable, and gladdening the hearts of many anxious friends, now careworn, weary, and despondent with life burdens.

An addition to our main building, on the south, equal in size to the present, having the modern arrangements for the care and custody of such children, would answer the demands for some years to come. I had hoped to have in readiness, and for your inspection, a plan of buildings erected during this year at the Pennsylvania Asylum and Training School for Feeble Minded and Idiotic Children, designed to carry out the congregate plan in the care and training of this class of persons, in which the entire separation of the sexes is provided, and in which it is sought to reduce the expense to the lowest possible amount, consistent with good care and government, and where the better class of imbeciles under the direction of an experienced attendant will care for the younger and more helpless.

These buildings and the system of management proposed

met the approval of Superintendents of Feeble Minded Asylums, at their last meeting, as fully supplying a want long felt in the design and architecture of buildings for the best care of this class of children.

I hope to have it in readiness before the Legislature shall assemble, for presentation to that body.

Besides having the approval of American Superintendents they were highly commended by Dr. W. T. O'Riely, Inspector of Prisons, Jails, Asylums, and the Benevolent Institutions of the Dominion of Canada, as well as Dr. John Kirkbride, the oldest and one of the most successful Superintendents of insane asylums in the United States, and who, by his ready pen and large experience has done much to remedy the defects in ventilation and construction of asylums and public buildings.

HOME DEPARTMENT.

The following will show you the movement of children in the Soldiers' Orphans Home at beginning of year, November, 1881:

Boys.....	86
Girls.....	46

Total.....	132
------------	-----

Received during year on application.....	42
--	----

Total.....	174
------------	-----

By act of Legislature, concurrent resolution, Geo. Muser, Indiana soldier	1
--	---

Total.....	175
------------	-----

Accounted for as follows:

Taken by friends.....	10
Homes provided	5
Eloped.....	3

Total.....	18
------------	----

Failed to return after vacation, yet enrolled and entitled to benefits	17
Now present—Boys.....	82
Now present—Girls.....	57
Total.....	<u>156</u>
Total.....	<u>174</u>
Geo. Muser, armless soldier.....	1
Total.....	<u><u>175</u></u>

These children range in age from 4 to 15 years. For the better care of these little ones they are divided into divisions of twenty-five children, for whom is provided a Governess—a lady chosen for her patience and Christian graces—who occupies the place of a mother.

The government is that of a family. Love is largely relied on as the ruling element of authority. In this living room the children are taught to be mannerly and kind, one to another, and the foundation of a good, moral and religious character is sought to be made. When not at play or in school, this room is their home. It is provided with all articles needful for the care and cleanliness of these children. It has water pipes supplying the wash room, and a bath tub supplied with hot and cold water, which is a necessary article in all division rooms.

The sleeping apartments are in the upper part of the building. Clean and comfortable beds are provided for each child. Each evening in the week the children of this department are all required to go to the chapel for evening worship. This consists in singing, reading a Scripture lesson, or a short talk on some practical duty in life, with a view to impressing a wholesome lesson on their young minds. This is followed by prayer. These services are conducted by the Superintendent or some one appointed by him.

Sabbath exercises consist of Sabbath school at 9 o'clock, at which time the Berean lessons are taught by teachers duly appointed to classes. At 10:30 o'clock religious services are usually held by the Superintendent or some person invited from the several churches in Knightstown. These services consist in sermons or talks especially adapted to the comprehension of children.

We are indebted to Dr. W. B. McGavran, J. W. Heaton, W. M. Edwards, R. Pedan, and the Revs. J. C. Stanley, and C. S. Hubbard, for their kindness in holding religious services for the children on several occasions during the year.

NEEDS OF THE INSTITUTION.

The importance of more land in connection with this Institution is a want so long felt and so often neglected that it seems discouraging to again present it to the Legislature through you. The present farm consists of fifty-seven acres, thirty of which are occupied as lawn for play grounds for the children and orchard, leaving twenty acres tillable. This necessitates the renting of sixty acres for pasture and twenty-five for cultivation, at a cost of \$330 per annum. As a matter of economy the State ought to purchase one hundred acres for general farming purposes. A farm adjacent and lying on three sides of the lands owned by the State, east of the road, can be purchased at reasonable rates. By utilizing the labor of the larger boys in the Orphanage and Asylum, it could be made to realize back to the Institution, with careful management, a profit of \$1,000 per year, which, together with the saving of present rents paid out, would pay for the land in five years, beside furnishing healthful employment and inculcating habits of industry in these wards of the State.

We realize hourly the necessity for some efficient means for extinguishing fire.

The sleeping apartments of the children are on the third floor, and should a fire break out near the stairways in the halls, cutting off access thereto, lives might be lost before it would be possible to rescue all the children; and we have no way of obviating the difficulty should it overtake us.

Allow me to suggest that you insist upon an appropriation of \$1,000 for putting in the needed facilities for our protection and relieving the constant anxiety of those in charge of the children in the Home and Asylum. A water main laid around and through the building, connected with our steam pump, and and sufficient hose on each floor, would afford the needed facilities and give us protection.

The danger from fire is greatly increased by the use of coal oil lamps for lighting up our building. We have on an average

during the evenings 150 lighted lamps, and when we consider the liability from this source, we feel no little degree of alarm for the safety of the household.

The building is already piped throughout, and only requires the means for furnishing the burners and gas jets, with a suitable machine for the generation of gas from resin or gasoline, and the work is complete.

When the cost of lamps, lamp flues, and the board and wages of our employes for this purpose alone are considered, it is certainly poor economy to further delay so important an improvement; and I feel warranted in asking for \$800 as a special appropriation for this work.

BAKERY.

Our bakery is situated one-fourth mile from the main buildings and is in a dilapidated condition and will require considerable expense to put it in order; and in view of this fact, it would be well to erect a new one near the Institution, and in connection with the store-room, so badly needed.

These I regard as necessities for the comfort and convenience of the Institutions.

COAL HOUSE.

In consequence of a lack of means, we are compelled to put our winter supply of coal out doors, exposed to the disintegrating effects of winter storms. An addition to our new boiler-house on the west, equal in size to it, would afford the requisite storage, and would seem a very necessary improvement.

Increased water supply is always the great need of all large institutions. The large quantity required for laundry purposes, and as a purifier of sewers and waste pipes, to say nothing of boiler supply, where steam-heating apparatus is used, and ours is no exception, and we now need increased sources of supply. A system of surface drainage from the lawns and play grounds might be thrown into a large cistern built in or near the center of the grounds, and would afford us increased capacity without very great expense.

The spring water which we are not unfrequently compelled to use in our boilers, endangers greatly their durability, by rea-

son of the incrustation of scales on the flues, requiring heavier firing, and consequently greater consumption of fuel.

BARN AND STORAGE.

The necessity for albuminous food in childhood, and its requirements for healthy growth and development, make it an essential article in our household, and nothing furnishes it more readily than pure milk.

And in order to have this, we need comfortable quarters for our milch cows. We can now care for some ten or twelve head, but we need thirty to keep this large household of children supplied, and we need additional stabling, and room for the storage of winter food, and for the shelter and accommodation of our increasing herd.

RECAPITULATION.

It may be well, before closing this report, to say by way of recapitulation, what has been done in the way of improvements:

A dry house has been constructed in the laundry, heated by steam, causing no delay here in consequence of bad weather.

Two improved wash machines have been added, run by an engine.

A new dormitory has been made off the Chapel, increasing the sleeping apartments, and relieving the crowded condition we found on coming into the Institution.

Bath tubs have been put in the girls' division rooms in the Orphanage.

Complete ventilation has been made under the main building by openings at south and north and excavations of earth for increased circulation of air.

The boilers have been removed to their present site, in a new building erected in November, 1881, thereby removing the menace to life and property which they occasioned while under the building.

Base-heating anthracite coal stoves have been placed in the Orphanage school building, rendering it comfortable in all weather.

Improvement in the heating apparatus and increased capacity by the putting in of a new steam boiler in the furnace battery, add very materially to the comfort of the inmates of both departments.

In addition to the foregoing improvements enumerated, we will at as early a day as practicable erect at the east end of the Asylum wing complete and adequate fire escapes, obviating in some measure the danger threatened in the event of a fire in that department. We also design to put in a steam trap to more thoroughly drain our steam coils, thereby increasing the efficiency of our apparatus. These and other minor improvements in the Chapel we design making from our current repair fund, trusting that the coming Legislature will provide for us in these matters as our necessities seem to require.

In concluding this report, allow me to say the end of the year has been reached without calling on the Legislature to meet a deficiency. We were enabled to do this by having a stock of supplies, aggregating some \$2,000, on hand when we entered the year, and, deferring our purchases of fuel and clothing, amounting to some \$2,000 more, until the beginning of the present fiscal year—November 1, 1882.

It may be well to say that we have been enabled to care for our feeble-minded children on a less sum than any other similar Institution in the United States, so far as known.

The Pennsylvania Asylum costs per capita per annum..	\$173 00
Orillia Asylum in Canada, with no schools.....	119 32
Illinois Asylum.....	175 00
Ohio Asylum.....	150 00
New York Asylum.....	169 00
While Indiana's has cost only.....	125 00

This desirable result is reached because we are not compelled to meet the expense that would be incurred by having two separate buildings to provide for—one heating apparatus and one kitchen supplies all our needs; one laundry is sufficient for our present wants, and would be for any reasonable increase; hence, no reason for a separation of these Institutions.

The children are kept separate in the building, on the playgrounds, in the dining room, and in the schools.

The number of children for the Orphanage must, by reason

of natural results, diminish with each year, and the time will come in a few years when the necessity for a Soldiers' Orphans' Home must pass away.

But while so little is known concerning the causes which produce idiocy and imbecility, we can not hope for any greatly diminished numbers in this department.

While this is the youngest of our State charities, it is by no means the least. Of all the unfortunates in the State, none are so helpless and dependent—appealing more strongly to our sympathies—than they who are shut out from society and denied the privileges accorded to the deaf and dumb, the blind, and the insane, for each of whom the State has made ample provision.

By reference to the last general appropriations it will be seen that for the care and maintenance of the Reformatory for Women and Girls (with, if I remember rightly, an average of 135 inmates) with little or no hired help, \$28,000 was given, while these combined Institutions, with an average of something over 230 children, nearly all of whom have to be cared for and waited on as dependents, 80 of whom need constant attention, only \$30,000 was provided.

We trust for more liberal things at the hands of the incoming Legislature, if they desire to keep pace with other States in their provisions for State charities.

And now let me thank you, gentlemen, for your manifest interest at all times in the work of the Institutions, and the many valuable suggestions made to me, and your assistance in carrying on the numerous improvements we have made during the last two years.

Dr. A. W. Green, our attending and counseling physician, has our thanks for his attention and punctual visitations, and the solicitous care and skill always manifested in his treatment of the sick and disabled in the Asylum and Home, as well as the matron and corps of faithful teachers and workers who have aided us in our difficult and trying position as head of this large household.

And now, invoking the blessing of Divine Providence on this Institution and all its interest, and believing He will, in answer to the many prayers continually ascending in behalf of its inmates, watch over and graciously bless all the efforts put

forth by this worthy charity; for the amelioration of the condition of all who may be placed within its walls.

Respectfully,

J. W. WHITE,

Superintendent.

PHYSICIAN'S REPORT.

To the Superintendent and

Honorable Board of Trustees:

Since my employment as physician to the Institutions, I have made daily visits, except Sabbath, save two weeks in August, Dr. W. M. Ewing kindly supplying my place during my absence.

The health of the Institutions has been pretty good. We have had no epidemics until the last few weeks, when we have been having the mumps.

There has been one death, Ellen Vailes, a feeble-minded girl, who died on April 13, of pulmonary phthisis, after a lingering illness.

It is with pleasure I refer to the universal kindness and courtesy with which I have been treated by the Superintendent, and all the officers and employes of the Institutions, and the hearty co-operation and assistance of all in the duties pertaining to my work as physician.

I desire to state, in conclusion, that the sick are all as well cared for, and as carefully nursed, as patients in our best private families.

Respectfully,

A. W. GREEN, M. D.

MATRON'S REPORT.

*To the Superintendent and
Honorable Board of Trustees:*

Permit me to express my thanks to you for your words of encouragement, that make lighter the varied duties of so large a household.

I am indebted to the Superintendent for the excellent assistants he has provided. For much of the home comforts depends on those employed to fill each department.

We have been favored with Christian women to care for the children in their family rooms. There are from twenty-five to thirty children in each room, and the work is one that requires a constant, patient, loving heart; one to guide them in the path of truth; to teach them to be self-supporting.

Those in charge of the dormitories of the Home and Asylum, have them in fine order for the coming winter, and much care is bestowed on them.

The kitchen, although small, is a model of neatness.

The dining rooms are kept in their usual order. The work in them requires many hours of labor and care.

We can give no better proof of our appreciation of those in charge of the laundry than that they have been here for years.

The sewing room reports 1,534 garments made during the past year. The room was closed two months this summer, not but that we needed to work every day, but the limited appropriation did not permit us to work all the time; consequently we are not ready for the winter's cold as we were last year.

For the same reason the Chapel and halls and many rooms are not in as perfect order as we could wish.

The number of garments made in the sewing room from November 1, 1881, to November 1, 1882:

I have endeavored to give you an accurate account of all the supplies that have passed through my hands from the several storerooms.

The care and labor of these storerooms are greatly increased by not being combined in one.

Very respectfully,

H. A. WHITE.

SCHOOLS FOR FEEBLE-MINDED CHILDREN.

To the Superintendent and

Honorable Board of Trustees:

We have had in our schools, during the past year, eighty pupils. A number of these who, at the beginning of the year, had no intelligent idea of numbers, now count, write, and designate, from one to one hundred.

Perhaps their progress is best shown in the marked improvement in arithmetic, both mental and written. They have improved also in reading and spelling from book and chart, as well as writing upon blackboard and slate. Others, still, who began with color and form exercises, now imitate any copy and read from Webb's Word Method.

Our most advanced pupils read intelligently from Second, Third, and Fourth Readers. Twenty-five compose and write very good letters; a few correspond regularly with home friends. All show increased ability to think for themselves and express their own thoughts. A few are developing a special talent for outline drawing on blackboard and with pencil.

Classes in plain sewing, crocheting, needle-work, scroll-sawing, and singing, have been accomplishing much in each branch.

All pupils have daily drill in exercises selected for their peculiar fitness in the physical development of these children.

The first gymnastic class of thirty boys and girls, have learned to perform six series of dumbbell exercises, and keep comparatively perfect time throughout; also, various evolutions in marching, which require constant attention and watchfulness, from each pupil.

Inasmuch as these children are inattentive, as a rule, the work done by them shows a marked degree of proficiency.

Taking into consideration their condition upon entering the Institution, and the short time many have been under training, they have shown improvement even beyond our expectation.

Very respectfully,

ANNA M. CLARK.

REPORT OF SCHOOLS OF SOLDIERS' ORPHANS' HOME.

To the Superintendent and

Honorable Board of Trustees:

The schedule of the work done this year, previous to my entering the schools, kindly prepared for me by my predecessor, was misplaced, and has never reached me; so I can only judge of the progress of the pupils in the past by their present ready mind to learn.

Perhaps it would not be amiss in me to compare the work of the children of the Home, with that done in our public schools, country and city.

I have watched with care that I might speak advisedly on this point, and the conclusion arrived at is, that, taking everything into consideration, the thoroughness and advancement of the pupils is superior to that of children in our city schools.

It is seldom that we find children of thirteen and fourteen years of age in our city schools, surrounded, as they are, by cyclopedias, libraries for reference, and the best of apparatus to aid them in their work, thorough in the common branches, and ready for high school work. Such is the case here.

There is no study hour in the evening, no home influences to incite to greater exertions; and yet these children are eagerly appropriating every item of knowledge at their disposal.

I have endeavored to keep, as near as possible, the gradation of my predecessor, as I consider it an excellent one—the best we could have in our present crowded condition.

We have enrolled in our schools 141 pupils—boys, 87; girls, 54—divided into three divisions: Primary Department, under Miss Leora White, composed of 52 pupils; Intermediate, with Miss Carrie De Vor as teacher, comprising 46 pupils; and Grammar Department, 43.

PRESENT COURSE OF STUDY.

Primary Grade.

Reading—Chart, First and Second Readers.

Language—Construction of simple sentences.

Numbers—Grube Method.

Writing—On slates.

Spelling—By sound and letter.

Work with splints, shoe pegs, color cards, music and exercises in memorizing.

Intermediate Grade.

Reading—Second and Third Readers.

Spelling—Selected words.

Number Work and Mental Arithmetic—French's.

Geography—Harper's Introductory.

Penmanship—Spencerian.

General exercises.

Recitations and Letter Writing.

Language Lessons—Oral.

Grammar Department.

Penmanship—Spencerian.

Third, Fourth and Fifth Readers.

Spelling—Selected Words.

Language Lessons and Grammar.

Geography—Introductory, Intermediate and Advanced.

Arithmetic—French's Mental, White's Complete, and Franklin's Written.

History—Barnes' United States History.

Physiology—Steele's.

Essays, Letter Writing and Recitations.

We hope to introduce into our schools at an early date drawing and a new work of practical importance to every young lady, entitled "Household Economy."

In view of the many grades which of necessity we are compelled to have, and the disadvantages under which we labor, the improvement is beyond our most sanguine expectations.

In behalf of the children and teachers, I would thank the Superintendent for his uniform kindness toward us and his constant endeavors to promote our welfare.

And to the Honorable Board of Trustees we would tender our sincere thanks for the courtesy ever shown us and the kind encouragement given us by their frequent visits to our schools.

Very respectfully,

SUSIE B. WILSON.

The publishers of the following named papers have the thanks of the officers and inmates of the Home and Asylum for the gratuitous furnishing of the same throughout the past year:

Laporte Argus.

J. W. WHITE,

Superintendent.

CIRCULAR.

ADMISSION OF PUPILS.

Section 2,812, Revised Statutes, 1881, says: "The purposes of this Institution shall be to care for, support, train, and instruct feeble-minded children."

"SECTION 2,815. There shall be received into the Asylum weak-minded children between the ages of seven and eighteen years, whose admission may be applied for as follows, subject to such rules and regulations as the Board of Trustees may adopt, as to their capability of improvement:

"*First.* By the father and mother, or by either of them, if the other be dead or adjudged insane. .

"*Second.* By the guardian duly appointed.

"*Third.* In all other cases, by the Board of County Commissioners of the county in which such child resides.

"It shall be the duty of such Board of County Commissioners to make such application for any such child that has no living sane parent or guardian in this State.

"The form for application for admission into the Asylum shall be such as the Board of Trustees shall prescribe, and each application shall be accompanied by answers, under oath, to such interrogatories as the Trustees shall, by rule, require to be propounded."

The law limits the scope and purpose of this Asylum to such children as prove "their capability of improvement."

The admission will be confined exclusively to *feeble-minded children*, such as are hardly distinguishable from ordinary children, and yet through some subtle default in functional action of the brain or other nerve tissue, in their mental expression and moral trait are imperfect and exceptional; which may have also some slight bodily deformity.

No epileptic; no paralytic; no incurable hydrocephalic; none afflicted with chorea, or St. Vitus' dance; none with the least

symptoms of insanity; no extreme low case of idiocy, nor any greatly deformed child, will be admitted. Those admitted are, under the law, divided into three grades:

First. Those whose expenses are paid in full by the applicant.

Second. Those whose expenses are paid in part by the applicant.

Third. Those who are supported entirely by the State.

Applicants voluntarily agreeing to pay for the care and support of a pupil will use blank No. 3, and have the same properly filled out and then returned to the Superintendent, without the necessity of going before the County Commissioners. All other persons must first make application to the proper Board of County Commissioners. The said Board must decide on what terms the pupil is to be supported at the Asylum; whether by the applicant in whole or in part, or whether by the State in whole or in part; and such order must be made by them a matter of record. If the pupil is to be supported in whole or in part by the applicant, blank form No. 2 must be properly filled out and returned. If the pupil is found to be unable to pay any portion of its support, blank form No. 1 must be filled out and sent to the Superintendent. And in every case the application must be "accompanied by answers under oath" of the interrogatories submitted to applicants, with the medical examiner's interrogatories properly answered. The Auditor's certificate, and executed by him, must be sent with every application. In cases where the applicant supports in whole or in part the pupil while at the Asylum, bond with sufficient surety will be required, which bond must be certified to by the County Auditor.

No child will be admitted which has lately been exposed to any contagious disease: small-pox, whooping cough, etc. Children must come well provided with plain, strong clothing, and stout shoes for walking, in any weather. All articles of clothing must be marked with the name of the owner *at full length*.

In case of pupils supported by the State, the County Commissioners shall provide the necessary clothing under "an act for the relief of the poor." (1 Dav. Stat. 676.)

A vacation will occur during the month of August, when all pupils not supported entirely by the State must be removed at the expense of the applicant unless otherwise ordered. Appli-

cations for admission, and all other general correspondence, should be directed to the Superintendent, at Knightstown, Indiana.

These regulations were adopted by the Board of Trustees, and must be strictly complied with.

APPLICATION FOR ADMISSION TO THE INDIANA SOLDIERS' ORPHANS'
HOME.

ANNUAL REPORT

OF THE

State Inspector of Mineral Oils

OF THE

STATE OF INDIANA.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1883.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received January 10, 1883, examined by the Governor, and handed over to the Secretary of State, to be filed and preserved in his office, and published as may be directed by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,

Secretary.

Filed in my office, January 15, 1883.

E. R. HAWN,

Secretary of State.

REPORT OF INSPECTOR.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

Inclosed I hand you my annual report for the year ending December 31, 1882, as authorized by an act of the last Legislature, passed April 11, 1881.

There has been a marked increase in the sale of coal oil over any previous year, as you will see by the report annexed.

It gives me pleasure to say that in not a single instance have I been able to trace any damage, either to property or person, in the use of the "Indiana legal test" oil for the past twelve months. Accidents have occurred in the use for heating purposes of gasoline, or the more volatile oils that the law prohibits the use of as an illuminator. I earnestly hope that the present Legislature may realize the necessity of prohibiting the sale or use of these liquids for any other than mechanical purposes.

I believe, in most parts, the law is a good one, and if strictly enforced will be the means of giving to the people a safe, and at the same time the most economical light that can be procured.

On next page I present a tabulated statement of oils inspected and fees collected during the past year:

AMOUNT OF OIL INSPECTED AND FEES COLLECTED.

BY WHOM INSPECTED.	WHERE INSPECTED.	Barrels Approved.	Barrels Rejected.	FEES.
State Inspector	Indianapolis	33,529	380	\$2,361 20
W. L. Halleck	Evansville	7,076		537 74
B. M. Willoughby	Vincennes	1,926	48	229 04
Col. J. T. McQuiddy	New Albany	5,921		426 55

Henry Weithoff	Cincinnati	7,105		737 20
Robert Fancher	Crown Point	600		180 00
L. A. Kirkwood	Muncie	368		48 15
Capt. L. Smithnight	Cleveland	7,766		801 18
W. L. Davis	Muncie	868		120 13
John Hoff	Wiesburg			
Total		103,213	502	\$8,918 10

Traveling, apparatus, stationery and other expenses... \$524 63
 Paid to assistants..... 335 00
 Total..... \$879 63

The law has been enforced throughout the State. Dealers seem inclined to yield a cheerful compliance with the statutes as enacted.

Respectfully submitted,

E. H. SWAYNE,

State Inspector of Oils.

January 8, 1883.

ELEVENTH ANNUAL REPORT

OF THE

MANAGERS

OF THE

Indiana Reformatory Institution

FOR

WOMEN AND GIRLS,

FOR THE

FISCAL YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1882.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received November 16, 1882, examined by the Governor, referred to the Auditor of State for verification of financial statements, and delivered to the Secretary of State to be filed and preserved in his office, and published as may be directed by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, November 21, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in my office November 21, 1882.

E. R. HAWN,

ROBERT PETRIE	Laundry Collector and Day Watchman.

REPORT OF MANAGERS.

To His Excellency, ALBERT G. PORTER,
Governor of Indiana:

OFFICE OF THE INDIANA REFORMATORY INSTITUTION, }
INDIANAPOLIS, November 7, 1882. }

The Board of Managers of the Indiana Reformatory Institution for Women and Girls submit to your Excellency their annual report for the fiscal year ending October 31, 1882.

For detailed and specific information, they refer to the accompanying reports of the Superintendent, Secretary, Steward, and Physician, which are submitted herewith as a part of this report:

PENAL DEPARTMENT.

There are now in the Penal Department 55 convicts. During the year 33 have been received, 1 recaptured, and 22 have been discharged upon the expiration of their terms; 1 has been released for new trial.

REFORMATORY DEPARTMENT.

There are now 144 girls in the Reformatory Department.

During the year 51 have been received of new commitments, and 7 returned from ticket of leave; 21 have been discharged, 40 released on ticket of leave, and 1 has died. A number of escapes have occurred, but all have been retaken.

In the two departments the average number of inmates during the year has been 192—5 greater than that of any previous year.

EXPENDITURES.

The expenditures, including all salaries, repairs and improvements, have been \$28,000, being the amount of the general appropriation.

Total amount drawn from the State Treasury.....	\$28,000 00
Deduct amount expended in repairs.....	2,554 37

Leaves the cost of support, salaries, etc.....	\$25,445 63
--	-------------

Deduct from this the amount paid into the State Treasury—

Net earnings of inmates... ..	\$676 09
-------------------------------	----------

And the amount paid into the State Treasury by the counties for the clothing and subsistence of children committed to the Reformatory Department from the said counties.....	8,178 92
--	----------

Total.....	8,855 01
------------	----------

And we have as the total expense of the Institution to the State for clothing, support, and caring for 192 inmates during the past year.....	<u>\$16,590 62</u>
--	--------------------

By the Secretary's statement it will be seen that the inmates are provided with everything necessary to their comfort at a cost, for clothing, provisions, salaries of officers, fuel, light, water, medical attendance, discharge gratuities and education, of \$2.39 for each person per week.

SEWERAGE.

This question remains much in the same condition as when we submitted our last report.

In June last, being notified by the attorneys in charge of the case that suit would again be pressed, urging an injunction from the further use of Crooked Run as a sewer, it was thought best for the President of the Board to visit Washington and endeavor to obtain the promise of a delay from the War Department until the Legislature should have decided the

matter. This was accordingly done, and the Secretary of War, Mr. Lincoln, promised that the suit should be held open, but inactively, until after the next session of the Legislature. But notice having again been received that the case would be called during the month, we fear the above promise is not being carried out.

Should the injunction be granted, we do not see how the Institution, with 210 officers and inmates, can be kept open for any length of time.

We would urgently recommend that your Excellency call the early attention of the Legislature to this matter, and, as a possible aid to you in discussing the subject, we beg leave to resubmit that part of our last report bearing upon the sewerage:

REPORT OF 1881—SEWERAGE.

On the 15th day of last April, the Legislature appropriated a sum not to exceed forty thousand dollars, for the purpose of constructing a sewer, wholly within the limits of the city of Indianapolis, but to connect with the sewers leading from the Deaf and Dumb Institution and from the Reformatory Institution.

The location and dimensions of the proposed sewer were prescribed in the law, and were based upon surveys and estimates previously made by officials of the city of Indianapolis.

It was made a condition of the appropriation that the city should, by ordinance, provide for the expenditure of a like sum on its part in the construction of the work, and for the preservation of the property in the future.

The special necessity for the sewer, so far as the rights and interests of the State were concerned, grew out of the fact that a lawsuit had been instituted in the name of the United States, in the Circuit Court of the United States, at the instance of the authorities commanding at the Arsenal, seeking an injunction restraining the Reformatory from using as a surface sewer "Crooked Run," a small stream of water in that locality which passes through the Reformatory grounds, and thence down to and across the corner of the Arsenal grounds.

At one time that stream may have been rendered somewhat offensive by that use of its bed, but since the present management has had charge of the Institution every effort has been made within the means at their command to remove all causes of complaint, real or supposed, and because Mr. Justice Harlan was satisfied of that fact he refused the injunction.

The managers very earnestly begged the members of the last Legislature to provide the Institution with ample sewerage.

Conferences were had between members of the Legislature and officials of the city of Indianapolis, and the latter proposed "that if the State of Indiana would pay a fair and just proportion of the cost of construction of a sewer of the dimensions and character" as described in the act, and along the route as prescribed, "the said city would pay the residue of such cost and would maintain the same in order and repair."

The proposition was accepted, and the appropriation of forty thousand dollars was accordingly made. That seemed to be fully the State's fair share and proportion.

The Civil Engineer of the city had before then prepared drawings and estimates for the work. It was with a full knowledge of the cost and necessity of the work that the proposition was made and accepted between the officials of the city and the members of the Legislature.

By the construction of the sewer, the State would provide for two of her institutions, containing between five and six hundred persons, while the city would provide sewerage for an important part of the city, much of it densely populated and containing many thousands of people. It was a requirement of the law, that before any part of the State's appropriation could be used, the city should, by ordinance, accept the terms and provisions of the act, and agree to construct the sewer within twelve months from the date of the act. It is understood that the plan and route of this proposed sewer was consistent with, if not a part of, the general plan of sewerage for the city heretofore contemplated, and it was thought a fortunate circumstance for the city that the State would pay one-half the cost.

The city authorities have refused to pass the ordinance as required by the law. Should they persist in that policy, the State's appropriation will fall back into the general treasury.

The injunction that is being sought from the court would, if granted, probably have the effect to close the Institution.

DISCIPLINE.

Many of the inmates are perverse, obstinate, and wicked, and their proper government requires an occasional resort to individual punishment.

Without obedience to rules and regulations the Institution can not be governed nor the inmates reformed. The Board of Managers and the officers, in their government of the Institution, have had in view the reformation of the offender, rather than the punishment of crime.

In regard to the success of these efforts we have little to say but what might seem a repetition of the utterances of previous years. We are gratified at the excellent reports that come back to us from the discharged of both departments.

The results of the work of the six years since the Institution has been entirely controlled by women are before the public, and, we think, will compare favorably with those of the initial years of the movement, when under the control of gentlemen.

We have not encountered the difficulties anticipated for us in managing either the inner workings of the Institution or its finances.

INDUSTRIES.

The inmates of sufficient age and strength are required to perform labor.

Suitable and remunerative labor that may be introduced without interfering with the moral training has proven hard to find; hence our industries are far less profitable than if conducted solely for the pecuniary benefit.

Our custom laundry work, employing thirty or so prisoners, and forty to fifty girls, does not bring us any net profit financially. As a training, it is invaluable to us, and to them it gives a well-learned household trade by which each may earn an honest livelihood.

Our overall and shirt manufacture is somewhat profitable, but confining, and not certain as a means of support after it is learned. At this work fifteen of the older women are employed; others in sewing for selves and patrons, housework, care of the garden in season, and bread-making, two-thirds of the bread used in the Institution being made in this department.

In the Reformatory Department, forty or more of the children, too small for the laundry, are employed in cane-seating chairs, working half the day, only, and being in school the other half.

The entire care of the house, cooking, bread-making, sewing, making and repairing their own garments, is attended to by the girls, under the direction of the various officers.

Proficiency in one line brings transfer to another, that each one may be trained in all of the useful housework departments.

The garden, taken care of by the girls, supplied us with all our summer vegetables, for the use of the entire family.

SCHOOLS.

The schools, as prescribed in the Act governing the Institution, are kept throughout the year in the Reformatory, and during the winter, in the Penal Department.

The girls are instructed in the rudimentary branches (as will be seen by Table No. XVI), and the prisoners are taught to read and write, where practicable.

HEALTH.

During the year the health of the inmates has been but fair. One death occurring in the Reformatory Department. We think a better grade of general health would prevail, if we had suitable grounds, enclosed safely, for exercise. For this we need a special appropriation to erect walls, or substantial fences.

Our facilities for caring for our sick are very limited. The rooms heretofore used for hospital purposes being small, illy adapted, and not shut off from the rest of the house, any contagion might become an epidemic in our midst.

A very modest appropriation for a hospital building, to be erected on the grounds, removed from the building, would certainly be a wise investment for the State. Please note Dr. Parvin's report on this point.

REPAIRS.

The building, being now twelve years old, it will each year require more and more repairs to keep it in good condition. We have this year painted the gutters and cornices, rebuilt the furnaces, barred nearly all outside windows more securely, and entirely replaced the return steam pipes, which were too small for the service required, and worn out so that the old could not be used in any way.

Our entire inside wood work needs repainting; several floors need relaying, and, with the minor repairs sure to arise, we may expect a not less great expenditure therefor the coming year than has been required during the past.

RECOMMENDATIONS.

We would, therefore, recommend that appropriations for 1884 and 1885 be made—

For general expenses (each year).....	\$30,000 00
For wall enclosing exercise grounds	4,000 00
For hospital (cottage)	3,000 00

COST PER REFORMATORY INMATE.

As required by section 31, of the act of May 13, 1869, the Board estimates the actual expenses, per annum, of clothing and subsisting an infant committed to the Reformatory Department at \$136.

THE BOARD OF MANAGERS EXPRESS THEIR OBLIGATIONS

To the Superintendent, who has for the nine years since the opening of the Institution served so intelligently and faithfully, and to whom we greatly owe the measure of success attained in the reformation of the inmates and the economical management of the finances of the Institution;

To the other officers, for their faithful support; and,

To yourself, for the interest taken in the welfare and management of the Institution.

Respectfully submitted,

ELIZA C. HENDRICKS, Pres.,

ELIZA J. DODD,

MARY E. BURSON,

Board of Managers.

SUPERINTENDENT'S REPORT.

OFFICE OF THE INDIANA REFORMATORY INSTITUTION, }
INDIANAPOLIS, November 1, 1882. }

To the Board of Managers

of the Indiana Reformatory Institution:

LADIES—In preparing the eleventh report I can thankfully record the same blessing that crowned our efforts in the past has again rested on our labors, encouraging me to urge the work of reformation to the exclusive care of our own sex as better calculated to make the permanent change necessary to rebuild character and prepare to re-enter society.

So long as crime exists, punishment must be provided; and punishment must be of such a nature that it will lift the criminal above the commission of crime; no easy task to perform, when we understand the evil passions with which many of them are sorely afflicted—revenge, jealousy, hatred, falsehood and theft—sore evils that no power can eradicate but the power of God in the heart.

The average in the Penal Department has been greater the past than in previous years; small, when compared with the number of men in prison, yet ten for murder, with life terms, out of fifty-five, makes a sad record.

The health in this department has not been so good the past year, a large number being sent with broken down constitutions. It is owing to Dr. Parvin's constant attentions, with plain, wholesome food and good nursing, that we are able to state no death has occurred.

If suitable grounds were provided for them to take regular

outdoor exercise it would be much more beneficial. The temptation to escape when allowed the open grounds is unwarrantable.

As in former years, nothing is found more helpful to reformation than regular and useful employment; for the object to be attained, as needful as food for the body. It is regretted that our laundry is still unremunerative. The cost of procuring the work, having no machinery, heating all water by steam, and the driven well not being available for laundry purposes, makes the unavoidable expense.

The fact of having no machinery, however, makes it invaluable as a training school for the inmates in that line which will best fit them for lives of usefulness, and enable them to procure good homes.

An arrangement has been effected with the Capital City Manufacturing Company by which a number of the women are profitably employed, under our own control, as no reformation can be effected if this is given up to contractors.

The average number in the Reformatory Department has been about that of previous years—two hundred less than the average number of boys in their Institution, yet large as compared with the number of women in the other department.

This is accounted for by the fact, not generally known, that we have little girls committed from no fault of their own—not even criminally inclined. Bereft of parents in tender years, they are changed from one home to another until their heart-sorrow stunts their very growth, and they drift into the Reformatory.

We hope, at no distant day, the Legislature will provide for the separation of dependent children from those rightfully committed to us for incorrigible and criminal tendencies, by the establishing of a school such as our sister State of Michigan already possesses in her School for Dependent Children, at Coldwater.

We are aware that there are those young in years, but older in sin than some of the older ones; yet classification in such an institution is an important factor.

In reviewing the work of the past nine years, we find it difficult to keep the addresses of all released girls. Many wish to lose their identity with the Institution on account of the sup-

posed disgrace attached to a "Reform School girl," while it gives to a "Reform School boy" a recommendation, because he has been under good discipline and acquired industrious habits. It implies "fallen" to the girl—a sure barrier to all social intercourse.

Ours are children of idle, vicious and irresponsible parents, almost without exception incapable of keeping them from the same idle and vicious lives. For the rescue of these the State has nobly provided, and for their final restoration we ask the aid, forbearance and sympathy of those who take them in charge. Our married list having reached 110, proves the necessity of greater diligence to fit them for the responsible positions of "wife" and "mother." The visits of some of these with their little ones have a cheering effect.

All are taught the importance of well-performed household duties; as far as possible to cut, fit, make, and repair their own clothing; to be neat and tidy in person. The older girls are giving good satisfaction in the laundry department, and take pride in excelling in this work. Those too small or young for the laundry, are employed in cane seating, at which some are very expert.

Only one death to record in this department, a girl of fourteen, from the Newcastle Poor House. She was very frail on her arrival, and after a few months died, a bright, happy Christian. The faith in the blood of Jesus was inexpressible; her calm, sweet face, beaming with delight at the near approach of death and Heaven, was a striking lesson to those having the privilege of administering to her.

The schools are regularly attended half the day. With the exception of a few incapable of improvement, the progress is very satisfactory. A common, plain education only is given. No attempt is made in the higher branches.

I regret to state we have a number of girls from whom little improvement can be expected. Excluded from the Feeble-Minded Institution, by being subject to epileptic fits—unfitted for the Poor House on account of their ability to reproduce—their influence here, demoralizing. What to do with them is an unsolved problem.

Of those gone out in the year, 88 per cent. are doing well, while the percentage of all released, we are gratified to be able

to report, is over 82 per cent. Though some fall, others, having tried the forbidden path, repent, return, and are doing well. The seed is never lost, and if not here, hereafter, we shall see the fruits thereof.

Their great want of will-power is truly a fearful disease, and when hereditary, a grave question how far they are responsible.

It gives me great pleasure to be able to report my co-laborers feel drawn to duty by the love of souls; though often discouraged, and fear their labor is in vain, again and again are they cheered by fresh evidences being given them that some wilful, wayward girl, has reached the higher plane of self-reliance and respect.

Our indebtedness to Mr. Wilson Morrow increases with his years of service, and, though nine times repeated, it is the more appreciated. May he, and all his co-laborers, who so faithfully seek to point the lost to the loving Saviour, be permitted to meet many blood-washed souls as seals to their labors.

The repairs have required a larger sum than was anticipated.

The steam pipes were found too small and in an unsafe condition for winter. They have all been replaced by larger ones at a cost of \$1,200.

The furnaces have been rebuilt, roof and spoutings put in good order, and all necessary repairs kept up in the building.

Since the escape of three prisoners, in 1881, a number of the outside windows have been secured by iron strips. It will be needful to have all the windows ironed in this way to prevent escapes.

The inside of the building is suffering for paint, not having been repainted since the building was first opened. Also the wooden fences, east and south, require the same. We should have new floors laid in several of our basement rooms to lift the children off the brick floors.

The wooden pavement is decaying, notwithstanding a guarantee was given for fifteen years. The above repairs, with others, will require about \$2,000 per year.

I am glad to state that the appropriation made by the Legislature of 1881 met all the expenses of the year, though the

greatly increased cost of living, in flour and provisions especially, has made the necessity for strict economy as imperative as in previous years.

The driven well, while furnishing a good supply of pure water, conducing to the health of the family, and enabling us to throw a constant stream of water into "Crooked Run," has added \$1,000 to our expenditure for coal.

We think that not less than \$30,000 should be asked for from the Legislature for the general expenses and repairs.

For all statistics, financial and tabular, I refer you to the reports of the Steward and Secretary, Miss Dunlop, whose valuable assistance has enabled me to remain longer at the post of duty.

To the ladies of the Board, for your counsel and advice, so constantly given, and whose kindness has rendered our meetings pleasant and satisfactory, I tender my sincere thanks.

Respectfully submitted,

SARAH J. SMITH,

Superintendent.

SECRETARY'S REPORT.

OFFICE OF THE REFORMATORY INSTITUTION, }
INDIANAPOLIS, November 1, 1882. }

To the Board of Managers

of the Indiana Reformatory Institution:

MRS. ELIZA C. HENDRICKS, PRESIDENT.

MRS. ELIZA J. DODD AND MARY E. BURSON,

LADIES—I submit to your consideration a full statement of the financial and statistical operations of the Institution for the year ending October 31, 1882.

Very respectfully,

ANNA DUNLOP,

Secretary.

FINANCIAL TABLES.

Respectfully submitted,

JAMES SMITH, *Steward.*

November 1, 1882.

PHYSICIAN'S REPORT.

INDIANAPOLIS, November 1, 1882.

*To the Board of Managers
of the Indiana Reformatory Institution:*

LADIES—In the year now closing there has been much more sickness than in the year immediately preceding.

In contrast with that year the number of cases of malarial fever was very great.

One birth occurred in the Penal, and one death in the Reformatory Department. The inmate dying was Anna McKee, aged 14 years; the cause of death, typhoid pneumonia.

I hope it will be in your power, by necessary appropriation from the Legislature, to have a suitable hospital room provided; that was one of the most important of matters which were utterly neglected in the construction of the building. There is now no room large enough, properly ventilated, heated, and provided with bathroom, nurses' room, etc., to be used for the sick.

Yours respectfully,

THEOPHILUS PARVIN.

SIXTEENTH ANNUAL REPORT

OF THE

COMMISSIONERS

OF THE

INDIANA HOUSE OF REFUGE

FOR

JUVENILE OFFENDERS,

FOR THE

YEAR ENDING OCTOBER 31, 1882.

In charge of Tailor Shop.

MRS. ALICE McHATTON,
In charge of Laundry.

MRS. M. E. RADEBAUGH,
In charge of Repairing Department.

COMMISSIONER'S REPORT.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

As required by Section 9 of the "Act to establish a House of Refuge for the correction and reformation of juvenile offenders," the Board of Commissioners beg leave to submit this, their Sixteenth Annual Report for the year ending October 31, 1882.

We are pleased to be able to report that the Institution in every department is in a good and prosperous condition.

The health of the inmates has been remarkably good, not a single death having occurred during the year.

The experience and observation of another year more fully convinces the Board that the law governing the Institution should be amended in many features.

The injustice of committing children of tender age and orphans is apparent to every one. The House of Refuge should not be a harbor for little boys and orphans, nor should it be a receptacle for children of second marriage who are neither incorrigible, nor have violated any law.

It is difficult to understand how a boy of seven, eight or nine years of age can be "a juvenile offender." While on the other hand it is very questionable whether boys over sixteen years of age should be committed to the House of Refuge. There are cases where boys over that age have been guilty of crime under such circumstances that they are entitled to sympathy and mitigation of punishment, but their cases should be presented to the Governor for commutation.

The law should be so amended that boys could not be committed under ten years of age nor over sixteen, and then only for "criminal incorrigibility" and "commission of crime."

Many of the boys after their release become negligent about reporting by letter, and all trace of them is soon lost. It should be made the duty of some county officer of each county to have the oversight of all discharged boys returned to such county, and to make reports to the Board. The boys would then know that their actions were being watched and reported, and if they should conduct themselves in an improper manner, they would be returned to the Institution. In our preceding report we called attention to the amendment of the law on this point, and offered the following plan, which we have no reason now to change.

"We have carefully studied this question, and know of no better plan than to make it the duty of the County Commissioners to look after such boys.

"When a boy is sent home or sent to a county to reside, the Auditor, as clerk of the County Board of Commissioners, should be notified, and a record made in a book kept for that purpose; the Township Trustee to have direct oversight of all boys sent into their respective townships, who shall make a full semi-annual report of each boy's surroundings, as well as his conduct, to the County Commissioners, who shall transmit the same to our Board.

"In this way the officers of the Institution would have full knowledge of the situation of each boy, and if his surroundings were not what they should be a new home could be procured for him. As it is, the Board has to rely largely upon uninterested parties to report the environments and actions of discharged boys, and there are doubtless many who are not treated as they should be."

NUMBER OF INMATES.

There have been placed under the guardianship of the Institution, since its opening, 1,718 boys. There were received during the past year 177. There were at the close of the year 372, being 25 more than the preceding year, and 183 have been released on ticket-of-leave.

SCHOOLS.

Special effort has been made to retain the high standard of the schools that they attained last year, for we realize the first duty the State owes to its wards is to see that they are educated.

Many of the inmates, although advanced in years when committed, have never attended school a single day. Their advancement generally is very rapid, but it can not be expected that such can become very proficient in the length of time they usually remain in the Institution. Every boy is in school one-half of each day, except during the warm summer months, and then only the primary grade is in session. In addition to the grades during the day, the Superintendent has a class, composed of all the boys in the Institution, in history or geography, on Saturday evening, in the chapel.

THE FARM.

The farm consists of 225 acres, but there is so much of it waste land along the creek, and taken up by buildings and playgrounds, that there remains only about 145 acres for cultivation and pasture. The yield of the cultivated land was most excellent, and especially the garden. The farm is in a high state of cultivation, with the exception of a portion of the land, which needs draining. The appropriation for the past year was not sufficient to permit the much needed work. It is to be hoped that the Legislature, at its next session, will make an appropriation sufficient to make such needed improvement, and that land that cost the State so much can be made to yield in commensurate with its cost. No investment pays the farmer better than that of drainage.

The farm is entirely *too small*. The Board recommends the purchase of additional land, if it can be done at a reasonable price.

THE ORCHARD.

The yield of the orchard this year was a partial failure. It also needs draining thoroughly. The soil is cold and wet. The severe winter two years ago destroyed so many trees, and the occasional deaths previous, necessitated a replanting, which was accordingly done by setting out last spring 862 choice apple trees, 150 pear trees, and 60 cherry trees.

COTTAGES FOR OFFICERS.

In our last report we stated that we hoped to be able to erect cottages for the families of officers that could not be accommodated in the Institution, but on account of our limited appropriation we were compelled to defer it to a more *convenient season*, although the expense would have been small by utilizing our own labor.

The experience and observation of another year convince the Board of the necessity of such improvement. An institution conducted on the open plan as ours is, can not be governed and controlled as it should be except by a good, strong, well-disciplined corps of officers. When an employe proves himself to be a good, efficient officer, his services should be retained if possible. To obtain officers, as a rule, with such characteristics, permanency of position must first be assured. Officers with families will not be satisfied unless their families are conveniently and pleasantly located. To obviate this embarrassment cottages should be erected for married officers.

ADDITIONAL BUILDINGS.

Two years ago the Board requested the Legislature to make an appropriation for two additional family buildings, which was readily granted, but failed to become a law for the want of time to pass the specific appropriation bill, very much to the detriment of the Institution and injustice to the boys.

The Institution is practically full. There are but 299 single beds in the dormitories, which have to accommodate at the present time 372 boys, the number now in the Institution.

The number has been reduced to the capacity of the buildings and appropriation, as far as possible, by liberality in discharges and refusals of admission. About 200 miscellaneous applications have been refused during the year. Besides, the courts throughout the State generally know of our crowded condition, and, doubtless, refrained from sending a great many more.

There are now eight family buildings, and to accommodate the number now in the Institution and those refused, and the probable increase during the next two years, will require five additional family buildings.

The Board would respectfully and earnestly urge, in view of

the state of things, an appropriation of \$25,000 for the erection and furnishing of new family buildings. That will enable us to receive, probably, all that may be committed.

The barn is old and very much out of repair. To prevent its falling and spreading apart, it became necessary to prop it on one side.

We respectfully ask an appropriation of \$2,000 for the erection of a new one.

The ice house, that has been used for several years, would not do any longer for the purpose it was designed. The building was cleaned out and repaired, and turned into a vegetable house.

We ask an immediate appropriation of \$1,000 to erect an ice house for the coming winter's use.

The remainder of the buildings are in good repair.

APPROPRIATIONS.

We shall need for next year \$72,000 appropriation for current expenses, which is itemized as follows:

Support.....	\$25,000 00
Furnishing goods.....	1,800 00
Boys' clothing.....	6,600 00
Fuel and lights.....	4,400 00
Horses	1,200 00
Cows.....	1,000 00
Agricultural implements.....	500 00
Officers' salaries.....	17,500 00
Contingent expenses	9,900 00
Books and stationery.....	500 00
Building and improvements.....	2,500 00
Drainage	500 00
New wagons and buggies.....	600 00
Total.....	<hr/> \$72,000 00

The above estimates are based upon a careful calculation of the actual expense under the different items the past year.

The items of \$1,200 for horses and \$1,000 for cows, is for the purchase of good, young horses and cows in lieu of the old, worn out ones.

The present mode of heating and lighting the Institution is expensive.

The Board asks a liberal appropriation to put in gas works and steam apparatus.

COST PER INMATE.

As required by section 20 of the Act establishing the House of Refuge, the Board estimates the cost of keeping and caring for each inmate for the ensuing year at \$120.

FINANCES.

By practicing the strictest economy, and by keeping the number within the appropriation, we have been able to live within the amount allotted to us at the last session of the Legislature.

The following indicate the receipts and expenditures:

Receipts.

Cash from State Treasury.....	\$45,000 00
Net earnings of chair shop.....	2,873 51
Cash for support of inmates and sale of sundries...	126 49
Total.....	<u>\$48,000 00</u>

Disbursements.

Expenditures for maintenance, support, etc.....	\$45,000 00
Earnings of chair shop, paid into State Treasury...	2,873 51
From support of inmates and sale of sundries.....	126 49
Total.....	<u>\$48,000 00</u>

Amount drawn from State Treasury.....	\$45,000 00

As the total expense the Institution was to the State for the past year.

For a more detailed statement, the Board refers your Excellency to the report of Superintendent, which is filed herewith.

In conclusion, the Board desires to commend the Superintendent and Matron, and their assistants in each department, for the earnestness and zeal that they have shown in their work during the past year.

Respectfully submitted,

L. A. BARNETT, President,

FINLEY BIGGER, Secretary,

WILLIAM FREEMAN,

Commissioners.

PLAINFIELD, IND., November 1, 1882.

SUPERINTENDENT'S REPORT.

To the Board of Commissioners Indiana House of Refuge:

Nearly three years ago I entered upon my duties as your Superintendent. The year which has just closed has been the most successful the Institution has ever enjoyed. The discipline has been good, the officers faithful and efficient, and a better class of boys has been released than in former years, while those yet remaining in the Institution show commendable progress towards that genuine reformation so much desired. I attribute these gratifying results to the fact that I have been aided by the most excellent corps of

OFFICERS

You have given me. A reform school is what its officers make it. No one should ever be employed whose daily life is not a proper model for the boys. Such a class of officers are here now. I have ever found them faithful, and although they are on constant duty for fourteen hours each day they have shrunk from no duty.

THE BUILDINGS.

Last spring every building was put in good repair. The old and defective gutters were torn away and new ones put in their stead. Down spouts of galvanized iron connecting with sewers underground took the place of the flimsy tin spouts, that had discharged water beside the walls to fill up the basements. Wire screens were placed over the Dormitory windows thus enabling the windows to be raised and lowered at will, and for the first time in the history of the Institution we have

had well ventilated sleeping apartments. Every building was well painted, and the buildings are now in a condition such as becomes the property of the State.

THE NEW WASH HOUSE AND LAUNDRY

Was begun last year and completed in this. The lower story consists of the engine room and washing department. Twenty-four vats are supplied with cold water from the pond by means of pipes laid underground; and with hot water from the engine. The up-stairs is occupied by the artificial drying room and the ironing apartments. All the washing and ironing is done by hand. But the new apartments are so pleasant that the boys no longer regard the wash house as a place of punishment, as they did when the washing was done in the cellar of the chair shop, and health is not endangered as it was then.

THE GROUNDS.

It is my judgment that all the surroundings of a reform school should be made as attractive and beautiful as the hand of art can make them. Scenes of beauty should greet the newly admitted inmate fresh from the gloomy walls of jails and from the dens of vice of our cities. I have therefore made all the improvements possible in our lawns, play grounds and walks. Several hundred maple, spruce, elm, and Carolina poplar trees were planted. Weeping willow trees were planted on the borders of the pond and German carp were placed in it. New fences were built, and the visitor of a year ago would scarcely recognize the place. It is a noticeable fact that, no matter how tainted with crime a boy may be, he relishes and enjoys whatever is beautiful.

THE FARM.

Our farm should be twice as large as it is. This is emphatically a "farm" school, and having but 225 acres, we can not give as much out-door farm work to the smaller boys that we should. In another year, if suitable provision is made this winter, there will be at least six hundred inmates. We need sixty cows to enable us to supply each boy with good fresh milk, which is far better for youth than tea or coffee.

To properly keep this number of cows will require the purchase of at least 200 more acres of land, and the farm of Mr. John Moore, lying just west of the State farm contains that number of acres, and is the only land conveniently accessible. It should, by all means, be purchased this year if held at a reasonable price. You have seen that the farm is everywhere in most excellent condition.

OUR GARDEN.

Our garden is the best in the State, consisting of about 70 acres of rich, bottom land, and under the direction of our Gardener, S. L. Kain, it has this year produced marvelously, as the yield as enumerated below will show you. Never was a bountiful season more welcome. Last fall and winter our expenditures for food alone were nearly \$500 per month more than ever before, because of the failure of crops the season before, and the consequent high prices of all foodstuffs.

FOOD.

Believing that a bad boy can never be reformed "on an empty stomach," it has been my care to see that they be well supplied with good and wholesome food. As a consequence, our boys have enjoyed health unsurpassed.

NO DEATHS.

It has been nearly two years since we have had a *single death*. Boys go to the hospital for their little ailments, but very little sickness has been known. The worst scourge that we had during the year was "itch." Three hundred and fifty boys had it, and 200 were quarantined at one time.

I desire to return my sincere thanks to Dr. J. E. Wellirn, now practising in Rushville, Ind., and to Dr. Amos Carter, his worthy successor in charge of the sick wards of the State. In Dr. Carter we have a most careful, sympathetic and untiring physician, and I trust he may long continue in the position which he fills so well.

FARM DRAINAGE.

During the year we laid some 300 rods of tile in the upland portion of the farm, but the work is scarcely begun. No less than 40 acres should be tiled the coming year.

THE ORCHARD.

For three years our orchard has failed almost completely. In the places where the old trees died, the 755 apple, the 150 pear, the 60 cherry and 7 crab trees, (selected and purchased by W. A. Ragan,) and planted last spring have grown well, and will, ere long, be sufficient to supply all the fruit needed.

FARM AND GARDEN CROPS.

Fewer orphan boys were committed this year than in previous years. It is a wrong to allow thriftless parents to send their children to become wards of the State. If too lazy to support their own offspring they should indenture them to a neighbor and not taint their names for life by a commitment to a Reformatory. Many of our small boys were sent here by a parent in order to remove the obstacles to a second marriage. While it is true that these children are isolated from the criminal boys yet in subsequent years when they shall have become men, their commitment here will be referred to and, although innocent of crime, a suspicious public will be slow to believe it.

Only last week a former inmate visited here and, although committed here by his father to prevent his mingling with the bad associates about his home, he told me people suspected that he was once a criminal. He is now one of the best business men in the State, and yet through life he will constantly meet with cold treatment from this cause.

Our law should be repealed and a new law enacted, suitable to the wants of the State and free from the vicious errors in the present law.

THE INSTITUTION OVERCROWDED.

The failure of the last Legislature to give us new family buildings, has greatly embarrassed us ever since. I do not know what we would have done had not the judiciary come to our aid and refused to commit except for crimes and for criminal incorrigibility. I myself have refused no less than two hundred applications for the reason that we had no place to put them, and several judges have told me of dozens of applicants refused by them. Nearly all the other States limit the age of inmates admitted to reform schools from ten to sixteen years, and then only for crime and criminal incorrigibility. This should be done in Indiana. Even with this change if proper accommodations could be secured there would be at least six hundred inmates here within a year. There are 1,800 inmates in the reform schools of Ohio at the present time. The following are our most

PRESSING NEEDS.

First, five new family buildings which would give an increased capacity of two hundred; second, a new barn; third, gas or electricity; fourth, steam heating apparatus; fifth, an ice house.

The following table shows the number of boys, and their different ages at the time of admittance, for the past year:

<i>No. of Boys.</i>	<i>Age.</i>
4.....	7
0.....	8
8.....	9

19.....	11
24.....	12
21.....	13
31.....	14
37.....	15
14.....	16
7.....	17

Total, 177

It will be noticed that there were but few committed below ten years of age. This was the work of the judiciary, and it was right.

AVERAGE AGE.

The average age of the three hundred and seventy-two boys here to-day is thirteen years and four months. Fifty-one of the boys are colored.

COST PER CAPITA.

The cost of maintaing a boy here for one year was fixed at \$120. One-half of this is paid by the county from which the boy is sent. The aim is to have one-half the entire annual cost of the institution borne by the counties. This year the amount paid by the counties lacked but \$1,592.31 of doing this.

WHY A REFORM SCHOOL CAN NOT BE SELF-SUPPORTING.

This can never be for several reasons. Frst, these boys come to us illiterate and must be educated. One-half of their time is spent in school. They must be supplied with books and teachers. Scarcely any of them have ever worked at anything. Habits of industry must be taught, and this is no light work. The average reform school boy does about one-half the work done by a boy on a farm. Many of them are but children, and capable of doing but little. Yet none are allowed to be idle, as

the work in the shops and on the farm plainly shows. All the work is done by the boys, under the direction and instruction of officers. They cane chairs, make and repair shoes, make and repair clothing, bake and cook, wash and iron clothes, do all carpenter work and attend the crops. Only the small boys cane chairs. We cane 4,000 chairs each month.

The following five counties were never represented by an inmate in this Institution: Crawford, Jay, Newton, Scott and Starke.

DO REFORM SCHOOLS REFORM?

I answer emphatically *yes*. A boy is received who has never known what it was to study, to work or to obey. All his habits are bad. His bad habits are at once broken up, and correct habits are taught. He is taught to be respectful and polite. The restraints thrown about him are such as prevent further evil-doing. He is taught to respect duty and law. Good morals and gentle manners are daily taught. He rises early, washes and combs his hair, and then assembles in the sitting rooms where the Scriptural daily reading, as recommended by the "American Sunday School Union" is read to the boys, after which all join in the Lord's Prayer. Breakfast follows. Then follows school and work until 11 o'clock. After dinner all play until 1 o'clock, when work and school are resumed. The even-

ings are spent in the family sitting rooms, where such exercises take place as should characterize a model home. It is the most pleasant of my duties to visit the families in their sitting rooms to talk to the boys and encourage them in the performance of their duties.

SATURDAY AFTERNOONS

Are spent in bathing, changing clothes and play. Base ball and foot ball are the principal outdoor games. Frequently the Saturday afternoons are enlivened by a match game of ball between the boys and clubs from the neighboring towns. In these contests our boys frequently come off victors. On Saturday evenings the boys all assemble in the Chapel to recite Geography or History lessons to myself. These branches are not taught in the day schools, but are taught by the family officers during the evenings of the week. While in the Chapel the songs to be sung on Sabbath are taught, and the evening is spent both pleasantly and profitably.

THE SABBATH.

The proper observance of the Sabbath is a very important part of the moral and religious training here. The aim is to not be so strict as to make the day an unwelcome one, but one that each boy will long and pleasantly remember. At 10 A. M. the boys assemble for inspection, after which they assemble in the Chapel to hear the sermon of the Chaplain, John G. Blake. I still regard him as most admirably fitted for this work. His work is one of the great causes of the success of the Institution. He has the love of every boy, knows most of them, knows their history, and scarcely a letter comes from our boys "on leave," in which they do not express their gratitude to him. I trust that the Institution may long retain his services.

OUR CATHOLIC BOYS.

As it is not our purpose to proselyte boys of any Christian belief, but to encourage them to lead a better life, we always welcome the quarterly visits of Rev. August Bessonies, Vicar General of the Diocese. He meets all the Catholic boys in the chapel and instructs them in their faith. We feel that our discipline and reformatory work is very greatly aided by these visits.

OUR SABBATH SCHOOL.

Each boy in the Institution is provided with a volume of the "Scholar's Hand-Book on the International Lessons," published by the American Sunday School Union. The Sabbath School lesson is prepared during the week and simply recited to me on Sabbath afternoon. As many of our "new boys" can not read, they are placed with older boys, who teach them the words, and, aided by the day schools, it is not long before they can study their lessons alone. Our boys are taught to memorize choice texts from Scripture as well as a thorough mastery of the Sabbath lesson.

TICKETS OF LEAVE.

No boy is ever discharged until he becomes twenty-one years of age, nor is the authority of the Institution relinquished when he is granted a ticket of leave. If he does badly at his home he is returned to the Institution. This careful oversight over the released boys is invaluable. The first ticket granted is usually but for thirty days. If the boy does well tickets are issued once every four months upon his reporting his conduct since last ticket was granted, accompanied by reliable certificates that he is a good boy.

Whenever I visit a town I make inquiries of all the boys in that vicinity and call upon them. Letters of inquiry are also addressed to the home of every boy, asking of police officers, postmasters and school superintendents how each of our boys are doing. I present the results of these inquiries in the following table, which is accurate and prepared with great care. you will notice that the per cent. of boys doing well is ninety-five, which is surely very gratifying.

List of Released Boys Gone since April 1, 1880, and who are still Out on Tickets of Leave.

THE SCHOOLS.

We carry on eight schools on the half-day plan. Our schools are well graded, in charge of first-class teachers, and the boys make greater progress in all their studies than they do elsewhere. There are good reasons for this. Here we have no truancy, no *absenteeism*. We have here a miniature system of *compulsory education*, and it is a success.

THE GYMNASIUM.

Never since the Institution was organized, fourteen years ago, was there any provision made for exercise and play during the winter season and in rainy weather. In erecting the new dining hall in 1880, this was provided for, and the lower story was set apart for a play hall. It was not equipped until this year. It is now a complete gymnasium, and when the weather will not admit of out-door play, the boys are taken there after dinner and supper. Officers join with the boys in the sports, and gloomy and bad weather no longer prevents play.

ESCAPES.

Our Institution is on the "open plan," with no walls, or bars, or cells in which to confine boys. So we must pay for this feature by boys escaping now and then.

Most of these are caught and brought back, and the cost is not inconsiderable; yet it is more than counterbalanced by the good that arises from making each boy feel that, to a certain extent, he is trusted. Most escapes are from the newer class of boys.

DISCIPLINE.

If there is any one word in the language that means more than any other word, it is this word, "discipline." It is that without which no family can nurture good men and women, and no school can be made a success. With it, there is order; without it, there is confusion. With it, rules are obeyed; without it, broken. The amount of punishment in any school is dependent upon the state of the discipline. Our discipline is

excellent and wholesome. I think that our boys have a larger degree of freedom here than I have observed in any Reformatory I have ever visited.

PUNISHMENTS.

Every case of punishment has been reported to you at your monthly meetings. The great object of punishment, not only here, but everywhere, should be the prevention of wrong-doing, and the reformation of the wrong-doers. Our aim is to make all punishments here as light as possible.

If a boy commits a wrong act, and it is in the class of "reportable offenses," he is "reported," and must on Saturday afternoon be sent to the Superintendent's office. If there are no palliating circumstances, the report is not erased but stands on the permanent records of the Institution.

The lighter offenses are punished by deprivation of the privileges he has abused. If he has abused his privilege on the play ground, he is not allowed to play for a certain time, and while his comrades play he stands with folded arms, with his back to the players. If the report is more serious, he is not promoted for that month, and so his stay at the Institution is prolonged one month. Or for more serious offenses he is degraded one or more months.

This system of merit marks, each having a bearing on a boy's stay in the Institution, is our chief punishment, and far more dreaded than corporal punishment.

In extreme cases the sewing machine strap is used with moderation. The switch, as an instrument of punishment, has been abolished. No punishment is allowed except in the family sitting rooms, and then only after a calm and sympathetic talk with the offender. I do not believe that any punishment inflicted is excessive.

FRIENDLY HELPERS.

State reformatory institutions, as a rule, do not receive much aid from the various Christian denominations, but to this rule, with us, there is always one prominent exception. The Society of Friends has continued to send good papers to the boys. They have on all occasions encouraged both officers and boys.

I herewith submit the statement of monthly expenditures, and a copy of every bill of expenditures during the year. I also submit the report of the Physician.

In conclusion, allow me to thank you for your warm support during the past year.

Very respectfully,

T. J. CHARLTON,

Superintendent.

PHYSICIAN'S REPORT.

To T. J. Charlton, Superintendent Indiana House of Refuge:

SIR:—On the 4th day of last June I received the appointment of physician to your Institution, as successor to Dr. J. E. Wel-liver, and now, at the close of the year's work, present you a brief report.

The general health has been good, yet not better than the very wholesome, generous diet, almost perfect ventilation and regular habits of the boys would necessarily insure.

We have had six cases of idiopathic erysipelas (four facial and two of the ankle), two cases of diphtheria, one of which was quite serious, but by isolation we had no further spread of either disease. There have been some cases of malarial fever, both intermittent and remittent. There have also been some cases of minor surgery, but nothing of any very great importance. Our cases have all made very good recoveries, none ending fatally. To our successful conduct of the cases may be ascribed in part the very efficient work of Mrs. Kain, in whose charge the hospital is placed. The faithfulness of some of the boys as nurses is certainly worthy of commendation, and among them none have been more attentive to duty than Charley Turner.

Respectfully submitted,

AMOS CARTER, M. D.

NOVEMBER 30, 1881.

Cash appropriation for November, 1881 \$4,600 00

ANNUAL REPORT

OF THE

DIRECTORS AND OFFICERS

OF THE

Indiana State Prison South,

FOR THE

YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. B. BURFORD, STATE PRINTER.

1883.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 20, 1882, examined by the Governor, referred to the Auditor of State for verification of the financial statement, and delivered to the Secretary of State to be filed and preserved in his office, and printed as may be ordered by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 20, 1882. }

I, E. H. Wolf, Auditor of State of the State of Indiana, do hereby certify that the financial statements of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in my office December 22, 1882.

E. R. HAWN,
Secretary of State.

OFFICERS OF THE PRISON.

DIRECTORS,

THOMAS SHEA,
P. L. D. MITCHELL,
JOEL. J. FINNEY.

WARDEN,

ANDREW J. HOWARD.

DEPUTY WARDEN,

JOHN CRAIG.

CLERK,

MATTHEW I. HUETTE.

PHYSICIAN,

WILLIAM F. SHERROD.

MORAL INSTRUCTOR,

THOMAS G. BEHARRELL, LL. D.

CAPTAIN OF NIGHT WATCH,

WILLIAM ROYCE.

STOREKEEPER,

DAVID M. ALLEN.

HOSPITAL STEWARD,

JESSE D. McCLURE.

DIRECTORS' REPORT.

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

The Board of Directors of the State Prison South respectfully make the following report of the business and management of the prison for the fiscal year ending October 31, 1882:

For the details of the several matters connected with the different departments, you are referred to the reports of the Warden, Clerk, Physician, and Moral Instructor.

The Warden's carefully calculated comparisons, and the Clerk's tabulated statements, will afford you an easy insight into the workings of the prison.

Our last report shows that the daily average number in the prison was 524, and that of that number 81 per cent. was employed on contract labor. This report shows a daily average number of 564, and that 84 per cent. of the whole number were employed in contract service.

The extreme high price of all the provisions that make up the great bulk of the convict's subsistence, having been maintained through the whole season, the daily cost per man for provisions is a fraction higher, but the daily average cost per man, on account of all expense, is a fraction lower this year.

Under the workings of new rules and regulations, formulated and put into force the early part of the fiscal year, the discipline of the prison has shown a marked improvement, and the use of the cat, as a mode of punishment, is rarely resorted to; as an additional incentive for good conduct, we recommend that the law, authorizing commutation, or good time, be so changed as to allow five days per month, for the first year, and a reasonable increase for each additional year.

The Moral Instructor's report shows an encouraging state of affairs in his department, and we hope his hands will be strengthened, and efforts seconded, by such an appropriation of money as will place the Prison Chapel in such a condition as shall be attractive to the convicts.

The Physician's report, shows an increased mortality over last year, but it will be noticed that a large per centage of the deaths were of chronic diseases, and that, too, of persons who entered the prison with broken constitutions. The crowded condition of cell room complained of by the Physician will be remedied when the new cell house "now almost finished" can be occupied.

The trip-hammer shop on the west of the hospital, should be removed to some place beyond a point that would free the hospital from the jar and noise, and the fumes of escaping gases arising from the burning coke, raw coal, etc.

The diet has been abundant, and of good, wholesome food, and has been satisfactory to the convicts, as evidenced by the fact that there have been no complaints to this Board on that head; for want of room, the Steward's department is not in as good working order as we desire to see it, but hope to improve it as soon as the upper story of the kitchen, "now occupied as a sleeping department by the convicts," is vacated, which will be done as soon as the new cell house is finished and furnished.

Messrs. Perin, Gaff & Co., contractors for the labor of 300 convicts, have presented to this Board, through the Warden, a bill for \$6,926.63, and claim payment thereof; their claim is based on the following facts:

When they became contractors in this prison, wooden buildings were assigned them for shops, and on the 26th day of December, 1879, one of said shops was destroyed by fire, and they replaced it with a good brick buiding at their own cost. Again, on the 14th day of July, 1881, another frame building used by them as an annealing room was, by an unavoidable accident, burned down, and again they built, under the direction of this Board, a good and substantial brick building. This Board advised this course for the reason, that we had no available means at our command for building, and did not deem it advisable to contract a debt for that purpose, and the buildings

being needed for the convenient and economical carrying on of their business, as well as to afford them room to work the labor already contracted. Therefore, we recommend that the State should reimburse them.

The new cell house in course of construction, is nearly completed, and having no available funds for furnishing it, we recommend that an appropriation be made for that purpose.

The administrative department and the new cell house being disconnected by a few feet, and the offices and guard hall being very much out of repair, we would recommend that a sufficient appropriation be made to build such connection and do such repairs as will be needed to put all in a good, substantial condition.

The decaying wooden fence that now encloses a large part of the prison, should be replaced with a good and substantial brick wall; within this wooden enclosure are all of the new shops, in which are employed more than one-half of the convicts, in the present condition it is a standing invitation for escape, and a constant menace to the prison management, and the State should not require its prison officers to take such risks, or give its prisoners such temptations to escape the penalty of their crimes.

On the west side, adjoining the prison grounds, is some unimproved land that should be bought by the State and added to the prison property; it is needed for storage, for contractors, and burial ground for the unclaimed dead; the ground now used for burial does not belong to the State, and its use may be prohibited at any time.

It is a matter of but short time, we think, before the State will be compelled to vacate the sewer now in use on account of the rapidly increasing population building up in the immediate vicinity of its outflow, and already complaints are made of the foul odors arising from its discharges during the hot season. To do justice to a large number of citizens, whose health is endangered and property damaged, we recommend that a new sewer be built that shall empty its discharges into the Ohio river.

Solitary confinement, as a means of repression, is gaining favor with prison officials, and to make that kind of punishment the most effective, such confinement should be isolated

and entirely apart from the general cells. The insane convicts should be provided with suitable quarters for their safety and humane treatment, and this prison being unprovided in these respects, the erection of a building as a cell house, for the purpose of keeping the insane and punishing the refractory prisoners, would be of great importance, and add to the discipline of the prison and comfort of the insane.

During the year there has been purchased for the Prison Library over 300 volumes of Bibles, school and miscellaneous books. We have cash on hand, being "visitors' contributions to the Prison Library," \$498.89, which will be expended from time to time for books, as opportunity offers or necessity requires.

It is but justice to say that Warden Howard has conducted the affairs of the prison with ability, and that he has been ably seconded by his efficient corps of officers and employes.

Respectfully submitted,

THOMAS SHEA,
JOEL J. FINNEY,
P. T. D. MITCHELL.

WARDEN'S REPORT.

INDIANA STATE PRISON SOUTH,
WARDEN'S OFFICE, December 1, 1882. }

To the Honorable Board of Directors:

For the fiscal year, 1882, I would report:

The number of convicts in the prison at the beginning of the year was 519; at the close, 590. The daily average during the year was 564.

Table No. 11 shows the number of convicts received, discharged and remaining in prison for each year, from the organization of the prison in 1822 to the close of 1882. The total received is 7,581. Total discharged, 6,991, as follows:

By expiration of sentence	4,490
Pardoned	1,140
Died	394
By mandate of court.....	260
Transferred to House of Refuge.....	23
Transferred to other prisons.....	407
Escaped.....	277
Total.....	6,991

The death rate during the whole period, based on the daily average, was one in forty-one, while the death rate for the last seven years, under the present management, was one in ninety-three.

Fifteen per cent. of all the convicts in the prison from the beginning were pardoned, while less than one per cent. were pardoned in 1882.

The daily average number in prison in 1876, was 531; in 1882, 564.

Of the 590 in prison, 248 were born in Indiana, 93 in Kentucky, 198 in other States, and 51 in foreign countries. At the time of conviction, 70 per cent. were 30 years of age and under. Fifty-five per cent. could read and write; 21 per cent. could read only, and 24 per cent. could neither read nor write. Sixty per cent. were single; 33 per cent. were married, and 7 per cent. were widowers. At the time of entering the prison, 21 per cent. admitted that they had been intemperate in the use of intoxicating drinks.

Eighty-one were convicted of murder in the several degrees; 18 of manslaughter; 36 of assault and battery with intent to commit murder; 7 of assault and battery with intent to rape; 13 of rape; aggregating 155. Of these, 21 were twenty years of age and under, and 56 were twenty-five years old and over twenty; or it may be said that 50 per cent. of the convicts, sentenced for the offenses above mentioned, were twenty-five years of age and under.

Forty-eight were sentenced for life. The average period of sentences below life is three years and eleven months.

LEASED LABOR.

The contracts for hire of labor now in force, are as follows:

With Samuel H. Perin, manufacturer of shelf hardware, to expire November 1, 1886, at 48 cents per day	100 men.
With Frank L. Perin, manufacturer of shelf hardware, to expire December 1, 1886, at 48 cents per day	100 men.
With Thomas T. Gaff, manufacturer of shelf hardware, to expire January 15, 1887, at 48 cents per day	100 men.
With John R. Gathright, manufacturer of saddletrees, to expire July 15, 1886, at 48 cents per day	20 men.
With Rider & Hyatt, manufacturers of cooperage, for one year from February 1, 1879, with the privilege to extend the time to five years, at 45 cents per day	50 men.
With Moses Pettingill, manufacturer of boots and shoes, to expire July 1, 1884, at 45 cents per day	40 men.

With Moses Pettingill, manufacturer of boots and shoes, to expire July 1, 1884, at 30 cents per day..... 25 men.
 With Joseph A. Bent, manufacturer of boots and shoes, to expire July 1, 1884, at 45 cents per day..... 35 men.
 With Joseph A. Bent, manufacturer of boots and shoes, to expire July 1, 1884, at 30 cents per day..... 25 men.

The Clerk's statements accompanying this report exhibit the receipts and disbursements. The books in his office show all the details. Each voucher is an itemized statement of the disbursements which it represents. The invoice book contains the original bills, numbered to correspond with the vouchers.

The actual cost of management on the several accounts was as follows :

Provisions and garden.....	\$29,646 50
Fuel and light.....	4,756 79
Hospital	1,245 97
Clothing	4,828 08
Bedding.....	878 03
Repairs.....	3,515 63
Team.....	436 18
Discharged convicts.....	3,375 00
Escaped convicts.....	261 30
Officers' salaries.....	26,613 86
All other expenses.....	4,764 12
Total.....	<hr/> \$80,321 46

With the daily average number of convicts, 564, and the foregoing statement, it is ascertained that the cost per man per day on the several accounts, in cents and decimals, was as follows :

Provisions, including garden	14.40
Fuel and light.....	2.31
Hospital.....	.60
Clothing	2.35
Bedding.....	.43
Repairs.....	1.71
Team.....	.21
Discharged convicts	1.64

Escaped convicts13
Officers' salaries.....	12.93
All other expenses.....	2.31
Total	39.02

Taking from the foregoing the items of officers' salaries, discharged convicts, repairs and team, we find that the cost of the support of convicts proper, covering clothing, bedding, provisions, fuel and light, hospital and miscellaneous expenses, was twenty cents and eight mills per man per day.

Deducting from the total expense, \$80,321.46, the salaries of Warden, Deputy Warden, Clerk, Physician and Moral Instructor, aggregating \$6,400, which were paid by the Auditor of State, and did not appear in the prison accounts prior to April, 1877, and we have for the purpose of comparison with former years, the cost per man per day reduced to thirty-five cents and nine mills.

The following is a comparative showing of the average general expenditure per man per day in each of the last thirteen years in cents and decimals:

For year ending December 15, 1869.....	55.49
For year ending December 15, 1870.....	50.46
For year ending December 15, 1871.....	42.26
For year ending December 15, 1872.....	46.02
For year ending December 15, 1873.....	58.68
For year ending December 15, 1874.....	52.71
For year ending December 15, 1875.....	47.93
For year ending December 15, 1876.....	41.13
For year ending October 31, 1877.....	35.83
For year ending October 31, 1878.....	29.03
For year ending October 31, 1879.....	29.55
For year ending October 31, 1880.....	29.81
For year ending October 31, 1881.....	35.81
For year ending October 31, 1882.....	35.90

The daily average number of men employed on contract work was 473. The average number in prison having been 564, the daily average per centage employed on such work was 84. The earnings by convicts on labor contracts were \$66,698.27.

It is estimated that eighty per cent of the convicts of pris-

ons, one year with another, is available for contract work, the balance being made up of the insane, feeble-minded, the permanently disabled from chronic diseases, the cripples, those excused from labor on account of temporary illness, those employed in policing the cell houses and grounds, in the prison tailor, and other shops, in the kitchen and dining rooms, as attendants upon the hospital, and otherwise in the doing of the prison work.

The new cell house is approaching completion. The undrawn balance of the appropriation is \$7,171.51. With the closing of this account, will also be closed the brickyard account, which includes the brick for that building.

We have no available funds for furnishing the cells. Iron bedsteads, bedding, night buckets, and other furniture for cells for four hundred men should be provided by specific appropriation. When completed and furnished, we shall have an abundance of cell accommodation.

The building occupied as a blacksmith and trip-hammer shop is in a dilapidated condition. It is only thirty-five feet from the hospital building, and the old cell houses. A new shop should be built elsewhere, and this one removed to make the grounds more airy on that side of the hospital.

The west end of the new cell house is thirteen feet from the administrative department. The two should be connected by a building, to be occupied in the lower story as a part of the guard hall, and the upper stories as guards' sleeping rooms.

The chapel should be finished. It is now but little better in its make up than the shops in which the prisoners labor. In very cold weather, it is not comfortable, because it can not be properly heated. It should be plastered and completed in such style as to make it attractive as a place for Divine worship.

The wooden wall enclosing a part of the prison, should be replaced with one of brick.

Many years ago, a sewer was built from the north side of the prison to a spring branch. Then there were no residences in the vicinity of the outlet. More recently a village has sprung up in that locality, and complaints of the foul odors from the branch, produced by the sewer discharges, are quite frequent, especially during the hot season of the year. This ought to

be remedied by constructing a sewer to empty into the Ohio river. The length of such sewer would be three thousand seven hundred feet. Amount of excavation, 12,336 yards. Probable cost, \$20,000.

Perin & Gaff Manufacturing Company, use the labor that is hired to work in the manufacture of shelf hardware and other iron goods. The State is obligated to furnish the contractors with suitable and sufficient shop room for the carrying on of their manufacturing business with the convict labor. When their business was first placed in the prison, it was agreed that the Directors should build a temporary shed building for a part of their work, but before doing so, the contractors proposed to furnish the brick for a brick building, which was accepted. Subsequently two wooden buildings occupied by them were destroyed by fire, and by them replaced with permanent brick buildings, there being no funds from which the Directors could rebuild. This company has filed in my office a claim for their several expenditures in these regards, aggregating \$6,926.63 which can not be paid except by specific appropriation.

The discipline of the prison has been vastly improved. The following regulations went into effect February 1, 1882:

CONDUCT REGISTER.

1. Each guard in charge of convicts, shall keep a conduct register, in which shall be entered the names of all the convicts in his charge, and opposite each name, in the proper column, shall be entered daily, by merit or demerit marks, the degree of good or bad conduct, to which the prisoner may be entitled. The register shall be fairly and impartially kept.

2. The merit marks shall be 1, 2, 3; the demerit marks "a," "b," signifying as follows: 1, fair; 2, good; 3, very good; "a," bad; "b," very bad. In all cases marked "b," a report of the offense shall be made in writing, on blanks to be furnished for that purpose.

3. From the guards' registers, the Warden will at the close of each month ascertain the daily average conduct of each convict, and from such average and the written reports, he will determine in what cases it shall be forfeited for the preceding month. A general register of convicts' conduct shall be kept in the Warden's office.

PUNISHMENTS.

1. The deprivations or punishments that may be awarded shall be as follows:

a. Deprivation of a meal or meals; of a library book; candles or other light to read by in the cell; of the privilege of corresponding with friends, or of seeing friends; or some other, or all the privileges ordinarily enjoyed by well behaved prisoners, and loss of commutation or good time.

b. Confinement in the ordinary cell upon bread and water diet.

c. Confinement in a dark cell upon bread and water diet.

d. Confinement in either the ordinary, or dark cell, handcuffed, upon bread and water diet.

e. By the infliction of the lash.

2. The punishment by the lash, shall only be awarded in the following extreme cases:

a. Assaulting or striking an officer.

b. Resisting an officer by any act of violence, or by threatening violence.

c. Escaping, attempting to escape, or assisting others to escape.

d. Continued insubordination by refusing to work, striking another prisoner, fighting, shouting, any notoriously refractory conduct, and for which two previous punishments under clauses "b," "c," or "d," has been awarded, and the prisoner warned that the third act of such insubordination will be punished by the infliction of the lash.

3. Such corporal punishment shall not be inflicted until the day after the commission of the offense.

4. Punishments provided for, in either of paragraphs "b," "c," "d," "e," and by deprivations of meals, shall not be inflicted in any case, until the Prison Physician shall have certified to the bodily fitness of the prisoner to undergo such punishment.

5. In no case shall a prisoner undergoing the punishment provided for in paragraph "d," be handcuffed longer than five hours at one time, nor oftener than twice in twenty-four hours,

with an intermission of at least one hour. During such punishment, and in all cases of punishment by confinement in cell, the officer in charge shall visit the prisoner at least once in every hour, and promptly deliver to the Warden, Deputy Warden or Physician, any message or request that the prisoner may desire him to take. Such prisoner will be visited by such officers whenever he may express the desire to see them.

At the close of each month, the Warden having ascertained the daily average conduct of every prisoner, gives to each whose average per centage is "70," or over, all the commutation, or "good time," permitted by law; tobacco during the succeeding month; permission to write to, and see friends, and any other privileges usually allowed prisoners.

In cases where the per cent. is below "70," commutation or "good time," for the month is not granted, and the use of tobacco is not permitted during the succeeding month. If below "60," permission to write to friends is also denied for one month; and if below "50," permission to see friends is denied. If below "35," the commutation or "good time," given for the former month is canceled.

To this time no prisoner has been denied a light in his cell, or the use of library books. In most cases that were formerly reported to the Warden, the Guard talks with the offender about his offense, and if the prisoner is penitent, and promises to do better in the future, the matter is disposed of with the demerit mark "a," on the conduct register.

If the Guard reports the prisoner to the Warden, and the report is sustained, he gives the demerit mark "b." In some cases in which the report is sustained, this mark is all the punishment inflicted. The mark "a," depreciates what would otherwise be the daily average per centage for the month 20 per cent., and "b," 40 per cent.

At the close of the month, the Warden issues to each convict a card certifying to him his daily average per centage for the month, and showing him what commutation is given, if any, and what canceled, if any, and what his privileges are for the succeeding month.

This system of registering conduct, executed fairly and justly, as it has been by all my assistants, appeals to the pride and self-respect of the convicts; and their standing as indicat-

ed is regarded generally by them as of far more importance to themselves than had been expected in the beginning, and has had far greater effect in itself of promoting cheerful submission to the demands of the prison laws, rules and regulations.

The following table shows the number of convicts that made the different daily average per centages in each of the several months:

PERCENTAGES.	February.	March.	April.	May.	June.	July.	August.	September.	October.
One hundred	76	177	188	215	239	230	208	219	234
Ninety, and under one hundred. . .	69	147	126	161	118	167	170	168	162
Eighty, and under ninety	78	111	109	76	96	64	69	66	55
Seventy, and under eighty.	117	44	46	63	38	41	55	51	45
Sixty, and under seventy	61	18	28	14	26	16	16	26	14
Fifty, and under sixty	43	23	19	30	8	25	16	16	11
Forty, and under fifty	21	10	14	6	9	4	5	6	4
Thirty, and under forty	22	10	9	11	12	1	4	1	1
Twenty, and under thirty	14	2	9	5	3	4	3	2	3
Ten, and under twenty	7	2	5	5	6	3	1	1	2
Under ten	31	9	13	4	25	22	32	16	7

This table is a fair showing of the conduct of the convicts, and indicates the improvement in discipline under the system of marks. While in February 340 convicts made 70 per cent. and over, and were given commutation or "good time," and all their privileges, the number that made the same in March was 479; in April, 469; in May, 515; in June, 491; in July, 511; in August, 502; in September, 504; in October, 546.

The commutation or "good time" law should be changed. I know of no reason for giving to a convict who is serving his tenth year any greater reduction of his term for good conduct during a month, than the prisoner who is serving the first year. The latter can only be given one day per month, while the former may be given ten days per month. There should be as much encouragement given for good conduct in the first year, as in the tenth or any other year.

Therefore, I recommend that the law be so changed as to give for good conduct, to all, a deduction from the term of

service of five days per month. To make this deduction most effective, it should be provided that for bad conduct the Warden may forfeit, two days for the first offense; four days for the second; eight days for the third; sixteen days for the fourth, and after that, any number of days, with the authority given the Directors and Warden to restore the deductions for future good conduct.

More than half the convicts are serving sentences of two years and less. The deductions or "good time" given under the present law are so small as to be lightly regarded by them; but, under the proposed change, the incentive to good conduct would be very great.

We have no suitable cells for punishment by solitary confinement, or for the confinement and care of the insane. A building for such purposes should be provided without delay.

Throughout the year the utmost harmony has prevailed in the executive management. All my assistants have been very painstaking in the discharge of their several duties. The Chaplain and Physician have not only rendered the most valuable professional services, but have constantly and zealously labored to assist me in promoting the general welfare of the convicts, for which they have my sincere thanks. I am especially grateful to the Directors for their advice and assistance in the discharge of the duties of my office.

Respectfully submitted,

A. J. HOWARD,

Warden.

PHYSICIAN'S REPORT.

INDIANA STATE PRISON SOUTH, }
JEFFERSONVILLE, October 31, 1882. }

To the Honorable Board of Directors:

GENTLEMEN—In compliance with law and the usual custom, I have the honor herewith to submit the following report of the medical department of this institution for the year ending October 31, 1882. I am pleased to be able to inform you that no disease of an epidemic or contagious character visited us during the year, and the prisoners have been favored with more than their ordinary degree of health. As is our custom, the most unremitting attention has been given to the diet, bathing, disinfecting, and cleansing of cells and premises at large. There have been 14 deaths during the year, all of which died of the following diseases: One from gun-shot wound, while attempting to escape; 2 from congestion of the lungs; 8 from phthisic pulmonalis; 1 from paralysis; 1 from dropsy with congestion of the lungs; 1 from inflammation of the brain, resulting from tertiary syphilis. It is a fact worthy of notice that all the prisoners except three that have died during the year, came into the prison with broken down constitutions, three of them never doing a day's work, and one of them carried into the hospital in a dying condition, and died a short time after his admission. It is perfectly astonishing to see the condition of some of the convicts when first brought to the prison, clothed in rags, even in the coldest weather, with a constitution seriously impaired and the seeds of incurable disease already sown by dissipation and excesses of every sort, and their long confinement in county jails. Who can be surprised that many of them die soon after being received? These facts are a sad commentary on the justice, not say the humanity, of

the judiciary of the State. Men are not sent to the penitentiary to die, but to do hard labor for a term of years. A prison is not an alms house, neither is it an asylum. The State has wisely provided for these unfortunate beings.

There are other reasons for the large proportion of pulmonary troubles. In the first place, the crowded state of the prison. The old cell house is badly contrived and poorly ventilated, so that when a man is locked in one of the cells after leaving off work in a well ventilated and comfortable shop, the change necessarily operates against him to a greater or less extent. Persons with a tendency to pulmonary consumption begin to decline almost immediately. When we recollect for a moment that every man takes into his lungs and throws out, contaminated and unfit to breathe again, an average of three hundred cubic feet of air per hour, we can readily see how impure the atmosphere must be in the cells, corridors and crowded rooms. This is evident from the rapidity with which such chronic diseases as consumption and scrofula become developed and progress toward a fatal termination.

I have stated on another occasion, no matter what our accommodations are or may be, we must expect a large percentage of deaths from consumption. This disease is a scourge to all prisons. If consumption, therefore, be the disease which we may expect to prevail in prisons, even in those where hygienic regulations are properly observed, how great must the mortality become where prisoners in an impaired condition of health when admitted and confined in cells and rooms without proper ventilation. I would call your attention to the hospital and its surroundings. On the southwest side there is a trip-hammer shop running the entire length of the hospital. The thundering of these hammers are continuous, and of such force that the building is kept in an oscillating or vibrating condition. When the wind is from the southwest, the fumes and smoke are blown into the hospital. I would recommend that this shop be removed at the earliest moment. I would also call the attention of the Board of Directors to the poor accommodations for the insane. Neither the cell house or hospital is a fit place for them. There ought to be erected a building, containing from ten to twelve cells, well ventilated and arranged, to confine these unfortunate convicts.

In regard to the diseases met with and treated during the last year, I would respectfully refer you to the hospital record. In conclusion, gentlemen, permit me to return my thanks for the kindness that I have at all times received at your hands. I am also under obligations to the Warden and Hospital Steward, Dr. J. McClure, for their aid as well as their solicitude for the health and comfort of the unfortunate beings committed to our charge.

Respectfully submitted,

W. F. SHERROD,

Physician.

MORAL INSTRUCTOR'S REPORT.

INDIANA STATE PRISON SOUTH, }
JEFFERSONVILLE, December 1, 1882. }

To the Honorable Board of Directors:

GENTLEMEN—You were pleased to elect me Moral Instructor of the State Prison South, February 7, 1882, to fill the vacancy occasioned by the resignation of Rev. N. E. Boring, who served faithfully and to your satisfaction for nearly five years.

I entered at once upon the duties of my office, using all the faculties within my reach for an early acquaintance with the wants of the men under my pastoral care. I visited the prisoners in the workshops, in the halls, and in their cells as I had opportunity, and found the large majority of them much more cheerful in their service than I had expected to find them, and I was gratified to learn that a large proportion of them were using the prison library books as a reading medium.

Many of the prisoners who are uneducated, I found, desired to learn to read and write, and prosecute other studies of a common English education. I provided such as were unsupplied with the needed text-books, and have encouraged and helped them as far as I could in their studies.

The first Sabbath after assuming the duties of my office, I held religious services, in the morning, and have continued to do the same every Sabbath since. The first two services I occupied the hall above the dining room, when the Warden of the prison kindly heated our commodious chapel and I organized at once a Sabbath school and a Prison Christian Brotherhood. The Warden directed me to purchase at your instance, for the prisoners, additional arithmetics, grammars, geographies, spellers, readers and slates, until all were supplied;

and I am glad to say that many of the men are engaged in improving in these branches of an education. I also procured a good map of Palestine for use in the Sunday School, with a blackboard exercise for each Sunday School lesson. I have also procured one hundred additional Bibles, and the cells and cots in the halls are all supplied so far as they are desired.

LIBRARY OF THE PRISON.

The library was reported to me as containing fifteen hundred volumes. Many of the books I found to be so mutilated as to be unfit for use any longer. We have, however, recovered the old books that could yet be used, and procured over three hundred volumes of good, well-bound books, carefully selected, and have added them to the library. I take pleasure in recording a donation of twelve volumes to the library, from the publishing house of Emmanuel Swedenborg's works. All the prisoners who are allowed, by the rules, the use of library books, have them changed every two weeks, and are making good use of their privilege in this regard. There are about four hundred volumes in their hands for reading, all the time.

THE PRISON CHRISTIAN BROTHERHOOD AND SUNDAY SCHOOL.

My acquaintance with the prisoners, formed as early as possible after entering upon my work, satisfied me that many of them had fallen from an experience of spiritual light and life, and desired to be recovered in the way pointed out in the Holy Scriptures. I organized a Prison Christian Brotherhood, based on the Apostle's creed, and one hundred and thirty of the prisoners have given their names for record as members, and are giving their attendance to a meeting for one-half hour every Sabbath. It is gratifying to me to say that the confession of many of them is free, and open and full, and they claim to have experienced pardon from God, against whom they have sinned. The attendance on the Sunday School is voluntary, and about two hundred and fifty are in regular attendance. I am assisted in the Sunday School work by faithful Christian workers, gentlemen and ladies, from the cities of Jeffersonville and New Albany. These Christian men

and women have the reward of an approving conscience, but will, through the great Redeemer, secure a higher and holier reward in the world to come.

DEATHS OF PRISONERS.

Since I entered upon my work here, nine of the prisoners have died, and several of them gave me assurance of a good hope. Two of them, by request, was sent to the homes of their friends for burial, and seven of them were buried by me in the prison burying ground.

MEANS OF FORMING ACQUAINTANCE.

It is important for me, as Moral Instructor, to learn as much as possible who the prisoners are, and what are their needs. I procured a Chaplain record book, in which I have recorded the name of every prisoner, the term of their imprisonment, the time when they were sentenced, and the place where, with the crime they committed; with other items of interest they may communicate to me. I visit them occasionally and give counsel and advice as I deem proper. But I find great advantage in forming this needed acquaintance by the privilege granted me by the Warden of reading the incoming and outgoing mail, and though often attended with great labor and perplexity, I cheerfully and gladly perform it. I have received many evidences from the prisoners, that they recognize in me a friend, and I have also received many evidences from the prisoners' relatives, that they feel sure that their unfortunate friends here are cared for, and are receiving the attentions of the Moral Instructor. While prison life is a penal servitude, it may also be a reformatory school, and I feel sure that to a good extent, this is true of the Indiana Southern Prison. We have instances of our ex-prisoners taking their place as reformed men in society, restored in a good degree to the confidence of the community in their old homes.

PRISON CHAPEL.

The prison chapel is a commodious room, sufficiently large to accommodate all the prisoners who are at liberty to attend

public service, and this includes all who are not necessarily occupied in the halls, kitchen, etc.; but while the chapel is well seated, and has in it a good organ, and we have an organized choir to lead in the singing, which adds greatly to the interest of the religious service, yet the room is in an unfinished condition, being without plaster on the walls and without ceiling, making it dark and dismal in cloudy weather, while the acoustics, like all unfinished rooms, is very defective. It would be greatly to our advantage, and to the advantage of the prisoners, to make our place of worship attractive. It is the usual custom in the outside world to make the "house of the Lord" as pleasant and attractive as our own homes are, for devout worshipers do not feel willing to live in their cell houses, and their house of the Lord remain unfinished. We greatly desire to have the chapel finished at an early day, when it will be an honor to the Southern Prison of this great commonwealth.

CONCLUSION.

I can not refrain from returning you my sincere thanks for your confidence in placing me in this responsible position, and for your counsel given me in my work. I am glad to acknowledge my obligation to every officer and guard of the prison for their uniform kindness and assistance, and especially the Warden, who is always ready to give attention and direction in any matters I am pleased to refer to him.

Respectfully submitted,

THOS. G. BEHARRELL,

Chaplain.

CLERK'S REPORT.

INDIANA STATE PRISON SOUTH,
JEFFERSONVILLE, IND., December 1, 1882. }

To the Honorable Board of Directors:

GENTLEMEN—I herewith submit to your consideration a full statement of the financial and statistical operations of this prison for the fiscal year ending October 31, 1882.

Very respectfully,

MATTHEW I. HUETTE,

Clerk.

REPORT OF ANDREW J. HOWARD, WARDEN.

Receipts and Disbursements from November 1, 1881, to November 30, 1881, Inclusive.

ANNUAL REPORT

OF THE

DIRECTORS AND OFFICERS

OF THE

Indiana State Prison North,

FOR THE

YEAR ENDING OCTOBER 31, 1882.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. L. BURFORD, STATE PRINTER.

1883.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT. }

Received December 1, 1882, examined by the Governor, referred to the Auditor of State for verification of the financial statement, and delivered to the Secretary of State, to be filed and preserved in his office, and published as may be directed by the Commissioners of Public Printing.

FRANK H. BLACKLEDGE,
Private Secretary.

STATE OF INDIANA,
OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 5, 1882. }

I, E. H. Wolfe, Auditor of State of the State of Indiana, do hereby certify that the financial statement of the within report, so far as they relate to amounts drawn from the State Treasury, are correct.

E. H. WOLFE,
Auditor of State.

Filed in my office December 22, 1882.

E. R. HAWN,
Secretary of State.

DIRECTORS' REPORT.

INDIANA STATE PRISON NORTH,
MICHIGAN CITY, IND., November 16, 1882. }

To His Excellency, ALBERT G. PORTER,

Governor of Indiana:

SIR—We have the honor to present for your consideration our second annual report of the condition and management of the Indiana State Prison North, from November 1, 1881, to October 31, 1882, inclusive.

The receipts and earnings of the prison, for the fiscal year, were \$98,832.46, and the expenditures were \$93,504.12. Showing an excess of receipts over expenditures of \$5,382.34.

The inventory shows provisions and supplies on hand amounting to \$3,300, a net saving of \$8,628.34 over all expenses.

There is also a balance of \$500 due the State on a judgment against Walker & Case, in the Laporte Circuit Court, not included in the above statement.

The continued high prices of meats, flour, meal and other provisions has necessarily increased the expenses of feeding the prisoners, the average cost per man being 15 8-10 cents per day, an increase of 2 1-10 cents per day as compared with last year. The cost of keeping each man, including expenses of all kinds, was 37 $\frac{3}{4}$ cents per day, a slight reduction as compared with former years.

The guards' boarding house at the prison, heretofore run by the Deputy Wardens, is now managed by the Warden, in the interest of the State.

The contract of Hibben & Co., for 40 men, was transferred to Ford, Johnson & Co., last February, an increase of 2 $\frac{1}{2}$ cents per man per day being secured during the existence of said contract.

On the 12th day of October, 1882, a contract was made with J. & J. R. Winterbotham, for the labor of 25 men, at 65 cents per day. The other contracts remain as stated in our last report.

The boilers for making steam for heating and cooking purposes are in a dangerous condition, besides being entirely inadequate to furnish the heat needed for said purposes.

They have been and continue to be, a source of great expense to keep them in repair.

In May last, we put in a new boiler in the shoe shop, at a cost of \$500, being in accordance with the terms of the contract, binding the State to furnish the power.

In addition to the water works put in last year, gas has been added to the improvements, affording a much better and safer system of lighting the prison.

We call the special attention of your Excellency to that part of the reports of the Warden and Physician of the prison referring to the absolute need of a bath, wash and dry house, and the erection of cells for insane and refractory prisoners.

Also to the report of the Moral Instructor on the condition of the library and its needs.

Every shop in the prison is fully occupied by existing contracts, and there is great need for additional shop room to employ the labor of convicts who are physically unfit to perform tasks on any of the contracts now in existence.

We have made careful examination of the prison and cells, and find that the prisoners are furnished with good beds and bedding, and that the prison is kept clean and neat.

The convicts have been furnished with plenty of good, coarse and wholesome food at all times.

The discipline of the prison is excellent; very few violations of the rules, and consequently little punishment, and that of the mildest character, consistent with the nature of the offenses committed.

Very few complaints have been made to the Board by the convicts, and the condition and discipline of the prison are satisfactory.

For detailed statements, we respectfully refer your Excellency to the report of the Warden, Physician, Moral Instructor, and Clerk.

We return our thanks to Warden Murdock, Deputy Warden Thomas E. Donnelly, and their assistants, for the excellent discipline of the prison, which has contributed largely to its prosperity; to the physician, Dr. H. L. Iddings, for the satisfactory sanitary condition of the convicts; to the Moral Instructor, Rev. M. W. Painter, for his efficient labors with the prisoners, and to the Clerk, Joseph Cowdin, for the accuracy with which he has kept the accounts of the prison. All of which is respectfully submitted.

A. C. BEESON,
WM. T. HORINE,
LEOPOLD LEVY.

WARDEN'S REPORT.

OFFICE OF THE WARDEN, NORTHERN INDIANA PRISON, }
MICHIGAN CITY, INDIANA, November 15, 1882. }

*Messrs. A. C. Beeson, Leopold Levy, and W. T. Horine,
Board of Directors of the Northern Indiana Prison:*

GENTLEMEN—I have the honor to submit this, my annual report of the management of the Indiana State Prison North, for the fiscal year ending October 31, 1882, as follows:

The average monthly number of prisoners was 621.

There were in prison, November 1, 1881.....	572 men.	
Received from courts	327 men.	
Witnesses returned.....	11 men.	
Recaptured.....	1 man.	
		<hr/>
Total		911 men.
Discharged by expiration of sentence.....	248 men.	
Remanded.....	9 men.	
Died	9 men.	
Pardoned by Governor	10 men.	
Pardoned by President.....	2 men.	
Witnesses out	11 men.	
Escaped.....	2 men.	
		<hr/>
Total		291 men.
Number remaining in prison Oct. 31, 1882.....	620 men.	<hr/>

The receipts and earnings of the prison for the year are as follows: .

From labor account.....	\$89,822 05	
Sales	6,570 95	
Visitors.....	687 75	
Rent	219 96	
United States convict account.....	1,531 75	
		<hr/>
Total amount of receipts and earnings.....		\$98,832 46

The disbursements of the prison for the year are as follows:

Discharged convict account.....	\$3,840 00	
Guards account.....	24,331 69	
Provisions account.....	44,069 40	
Clothing and bedding account.....	4,658 75	
Drugs and medicines account	836 36	
Stationery and books account	334 89	
Fuel account	2,503 18	
Lights account.....	468 16	
Improvements and repairs account.....	2,607 82	
Expense account.....	1,099 41	
Officers salary account.....	6,400 00	
Escaped convict account.....	174 55	
Advertising account.....	56 00	
Insurance account.....	213 75	
Crockery and table ware account.....	333 34	
Library account.....	40 55	
Laundry account.....	623 03	
Attorney fees.....	700 00	
Household furniture for State boarding house	243 24	
		<hr/>
Total amount of disbursements.....		93,504 12
		<hr/>
Excess of receipts over expenditures.....		\$5,328 34

Balance on hand October 31, 1881	\$6,348 01
Received from State of Indiana on general appropriation.....	1,462 74

Excess of receipts over expenditures for year ending October 31, 1882, inclusive	5,328 34
Leaves a balance on hand October 31, 1882	13,139 09
Amount due prisoners on account of overwork and cash received	2,068 12
Total amount	<u>\$15,208 21</u>

For the details of the financial and statistical condition of the prison, reference is here made to the report of the Clerk, Joseph D. Cowdin.

To deduct from provision account, which is	\$44,069 40
The sales of same during the year by Steward	4,813 00
And value of that on hand November 1, 1882	3,300 00
Total	8,113 00
Leaving	<u>\$35,955 42</u>

The monthly average number of men being 621, makes the average cost of feeding each convict per day, in 1882, 15 8-10 cents, or 5 3-10 cents a meal. The average cost of clothing each convict, per day, 2 cents, and the average cost of fuel and lights for each convict, per day, 1 3-10 cents, and the average cost of each prisoner per day, in 1882, including salaries of officers and guards, provisions, repairs, clothing and fuel, medicine, gateage on discharge, and all other expenses, was 37 $\frac{2}{3}$ cents.

Owing to the continued high prices of meats, flour and other provisions, I have been unable to board the prisoners for less than 5 3-10 cents a meal.

The convicts have worked during the past year an average of nine hours and twenty minutes each day.

I am now pleased to report cash on hand the sum of \$5,328.34, being the excess of receipts over expenditures for the last year,

and provisions on hand, as per inventory, amounting to \$3,300, which shows a net saving of \$8,628.34 over all expenditures, including improvements and repairs, officers' and guards' salaries, provisions, clothing, fuel, lights, medical stores, gateage to discharged convicts, and all other expenses.

The discipline of the prison remains good. No unusual violations of the rules have occurred during the past year.

There are forty acres of tillable land connected with the prison; the balance of sixty acres is unproductive. We have raised this year 800 bushels of potatoes, 250 bushels of tomatoes, 250 bushels of radishes, 100 bushels of beets, 2,000 pounds of lettuce, 40 barrels of cucumbers, 30,000 heads of cabbage, which have been and are being used by the prisoners. We have also cut and saved ten tons of timothy hay.

The following will show the condition of contracted labor existing October 31, 1882:

J. & J. R. Winterbotham, cooperage, carriage, sleigh, and wagon manufacturing:

50 men at 63 cents a day; expiring May 18, 1887.

75 men at 63 cents a day; expiring April 1, 1888.

25 men at 57 cents a day; expiring January 16, 1885.

25 men at 65 cents a day; expiring October 12, 1887.

John G. Mott, wire and agricultural tools:

30 men at 45 cents a day; expiring January 1, 1884.

Ford, Johnson & Co., contract on chairs and cradles:

50 men at 50 cents a day; expiring February 15, 1884.

25 men at 50 cents a day; expiring May 15, 1884.

25 men at 50 cents a day; expiring August 15, 1884.

50 men at 55 cents a day; for year ending Jan. 16, 1883.

50 cents a day; for year ending Jan. 16, 1884.

46 cents a day; for year ending Jan. 16, 1885.

40 men at 55 cents a day; expiring June 7, 1887.

25 men at 55 cents a day; expiring July 19, 1887.

65 men at 37½ cents a day; expiring March 15, 1885.

Joseph Pratt & Co., manufacturing boots and shoes:

85 men at 60 cents a day; expiring January 16, 1885,
with conditional privilege of 15 more men.

I would again call your attention to the condition of the State boilers. They are old, and continually needing repairs, at a large expense, and are not large enough to afford sufficient heat for the comfort of the prisoners, and I fear an accident from overtaxing them to furnish the required heat for cooking and heating purposes. A bath, wash and dry house is very much needed, and a store-room for fuel, so that the Warden can purchase coal at a proper season of the year, when it can be bought at a great saving to the State.

Your attention is also called to the necessity of having a solitary prison for the insane and incurable and refractory prisoners, which is indispensable for the humane treatment of such unfortunates.

The sanitary condition of the prison is good. For further information, I refer you to the report of Dr. Homer L. Iddings, the Prison Physician. For the moral and educational condition of the prison, I refer you to the report of Rev. Mordecai W. Painter, Moral Instructor of the prison.

To Deputy Warden Thomas E. Donnelly, Clerk Joseph D. Cowdin, Prison Physician Homer L. Iddings, Moral Instructor Mordecai W. Painter, the Steward, Robert Sutton, and guards, I return my thanks for the very efficient manner in which they have performed the several duties intrusted to them, and to you, gentlemen of the Board, I return my sincere thanks for all the courtesies extended to me at your hands.

I remain your obedient servant,

JAMES MURDOCK,

Warden.

PHYSICIAN'S REPORT.

HOSPITAL DEPARTMENT,
NORTHERN INDIANA STATE PRISON,
MICHIGAN CITY, IND., October 31, 1882. }

To the Honorable Board of Directors:

GENTLEMEN—I have the honor to submit this, my annual report for the year ending October 31, 1882.

During the past year there have been nine (9) deaths, including two suicides, viz:

James Allenthorp, aged 28 years, died November 15, 1881, of pneumonia.

Howard Alston, aged 22 years, suicided April 3, 1882.

Bartholomew Scollard, aged 51 years, died May 19, 1882, of chronic bronchitis.

Frank Messersmith, aged 23 years, suicided May 26, 1882.

John Curry, aged 23 years, died July 13, 1882, of pulmonary phthisis.

James Henry, aged 27 years, died July 27, 1882, of pulmonary phthisis.

Theodore Brown, aged 51 years, died September 26, 1882, of softening of the brain.

Henry McColley, aged 31 years, died September 30, 1882, of synovitis of knee joint and blood poisoning.

Thomas Mack, aged 23 years, died October 2, 1882, of tuberculosis.

From the above statement it will be seen that only one death has occurred from acute disease. The health of the prison has been good, as is evident from the fact that the excused list is lighter than last year, notwithstanding there has been an average of 50 more men in prison.

The diseases treated are those incident to the climate and locality, such as malarial fevers, typhoid fever, pneumonia, rheumatism, catarrhal troubles, diarrhœa, dysentery, etc., while injuries from tools and machinery claim considerable attention from the physician.

The sanitary condition of the prison is good. Our system of ventilation and sewerage is most excellent. Scrupulous cleanliness is enforced among prisoners, and every department is daily inspected and cleansed. In fact every condition conducive to health has been rigidly observed. Good wholesome food is given in ample quantity.

I would most earnestly recommend to your consideration the urgent need of a suitable bath house and a building for the confinement of insane convicts. Humanity demands it.

Suitable bath rooms are a matter of economy to the State as a sanitary measure in the prevention of disease.

Allow me to express my gratitude to officials of the prison for the uniform courtesy with which I have been treated.

I remain very truly yours,

H. L. IDDINGS,

Prison Physician.

MORAL INSTRUCTOR'S REPORT.

MICHIGAN CITY, IND., October 31, 1882.

*To the Honorable Board of Directors
of the Indiana State Prison North:*

GENTLEMEN—With gratitude to our Heavenly Father for the preservation of our lives and the general health and good management of the prison during the past year, I submit for your consideration my second annual report.

In all my work I have had the indorsement of the Warden, and have been treated with courtesy by the officers and employes of the institution, for which I feel grateful. In my intercourse and labors with the prisoners, they have uniformly treated me with respect, and manifested at least a seeming appreciation of my labors, which has been a source of strength to me.

EDUCATIONAL WORK.

In my report last year I spoke of having organized an educational class. I am glad to be able to report it has succeeded beyond our expectations. On commencing the work we had to commence at the foot of the hill and work up as best we could. The school is now pretty well systematized, and has become an important element in the reformatory work. About 16 per cent. of the inmates of the prison are illiterate, many of them unable to pronounce words of three letters. That class of convicts we can scarcely hope of reforming, or ever becoming useful citizens, without literary instruction. As we get them interested in education, it seems to awaken a new life in them; their minds expand, and many, I believe, are turned in an en-

tirely different direction. About 55 attend the class, many of them making commendable progress. I look upon it that this branch of the work is only in its infancy; that greater facilities and more time should be given to educating this class of prisoners.

RELIGIOUS WORK.

Our Sabbath school has continued in a prosperous condition throughout the year, with an average attendance of 80 scholars. A good prison record is necessary to get permission to attend the school. We have been ably assisted in the school by a band of teachers from the city. Under the blessing of God I think the Sabbath school is doing a good work in the prison.

CHAPEL SERVICES.

Religious services have been held in the chapel each Sabbath during the year. The services consist in singing by the choir, reading the Scriptures, prayer, and preaching. The convicts, excepting those in the dining room, are all required to attend the services that are able to attend. The prisoners during these exercises have given good attention, and I trust gospel truths have found a lodgment in many hearts. Quite a number have professed to be converted, and give evidence of a renewed heart.

LIBRARY.

The prison library is far from meeting the wants and needs of the prison. We have kept the books as well dressed up as we could, but many of them are mutilated and worn out. There has been no appropriation made for the last four years to increase the library, and during that time there has been a large increase in the number of prisoners. The demand is imperative that there should be an appropriation of at least \$1,000, for the purpose of purchasing books to increase the library. Many of the long-time men have read the principal part of the books in the library. Plenty of good reading is an important adjunct in the reformation of the men and discipline of the prison. I can not speak in too strong terms of the need of a liberal appropriation for this purpose. We give the men an opportu-

ity each week to change their books and circulate large numbers of papers among them. The papers have been generously donated by outside parties.

REFORMATION.

With the advance made in Christian civilization the idea of reformation in connection with the management of criminals and penal institutions has become a fixed fact, and should be the great central thought in the management of such institutions. That men, though suffering the penalty of violated law, may be so taught, impressed, and disciplined, that when again they become citizens they will lead industrious and honest lives.

In conclusion, allow me to express my warmest thanks to you and other officers of the prison for the courtesy and sympathy extended to me in my work.

Yours truly,

MORDECAI W. PAINTER,

Moral Instructor.

CLERK'S REPORT.

CLERK'S OFFICE, NORTHERN INDIANA PRISON, }
MICHIGAN CITY, November 15, 1882. }

Messrs. A. C. Beeson, Leopold Levy, and Wm. T. Horine,
Board of Directors for the Northern Indiana Prison:

GENTLEMEN—I have the honor to submit to you a full statement of the financial and statistical operations of the Northern Indiana Prison, for the year ending October 31, 1882.

I remain your obedient servant,

JOSEPH D. COWDIN,

Clerk.
